general assembly about the detection, treatment, education, and awareness of kidney disease in Colorado.

The task force has the following duties:

- To work with various entities to create kidney disease educational programs and increase overall awareness of kidney disease in Colorado;
- To examine chronic kidney disease, transplantation, donation, and the higher rates of affliction in minority populations; and
- To develop a plan to raise awareness about kidney disease in Colorado, which shall include an ongoing campaign that incorporates health workshops, preventative screenings, social media campaigns, and television and radio commercials.

The task force is required to submit an initial report with its findings and recommendations to the general assembly by December 1, 2023. The task force is required to convene by November 1, 2021, and is required to meet at least 4 times every year. Following the task force's submittal of the initial report, the task force shall elect a chair and vice-chair from the members who are not part of the general assembly, and the members who are part of the general assembly shall transition to an advisory role. The task force is required to submit follow-up reports each year.

1 *Be it enacted by the General Assembly of the State of Colorado:*

2 **SECTION 1. Legislative declaration.** (1) The general assembly
3 hereby finds and declares that:

4 (a) The kidneys are vital organs that clean the blood, help control
5 blood pressure, make red blood cells, and keep bones healthy;

6 (b) Approximately 37 million Americans currently suffer from
7 kidney disease and millions more are at risk for developing kidney
8 disease in the future;

9 (c) Black Americans are about 4 times more likely and Hispanic
10 Americans are about 1.6 times more likely than white Americans to suffer
11 from kidney failure;

12 (d) In 2017, there were 1,138 new cases of kidney failure

1 diagnosed in Colorado, and of those new cases, only 68 were able to
2 receive a transplant;

3 (e) In 2019, only an estimated 1 in 4 Coloradans on the waiting
4 list for a kidney transplant were able to receive a transplant;

5 (f) The main causes of chronic kidney disease are diabetes and
6 high blood pressure, and an estimated 7% of Coloradans suffer from
7 diabetes and an estimated 25.9% of Coloradans have high blood pressure;

8 (g) According to the Centers for Disease Control, 96% of people
9 with early kidney disease are unaware that they are afflicted because there
10 are typically no symptoms until the later stages of the disease; and

11 (h) If kidney disease is detected early through blood and urine
12 tests, it is often possible to slow or stop its progress through treatment.

13 (2) The general assembly further finds and declares that, in light
14 of the detrimental effects of kidney disease on the population of Colorado
15 and the United States, it is in the interest of the state and of local
16 communities to convene a task force to study and make recommendations
17 on the prevention, treatment, disparity of impact, and overall awareness
18 of kidney disease in Colorado.
