Department of Higher Education Overview

Key Responsibilities

- ✓ Provides higher education opportunities for Colorado residents through 26 state-operated campuses, two local district junior colleges, and four area vocational schools.
- ✓ Administers the College Opportunity Fund Program that provides stipends to students for undergraduate education.
- ✓ Negotiates fee-for-service contracts with institutions to provide graduate, professional, specialized, rural, and other education programs.
- ✓ Distributes state financial assistance for students to attend public, private, or proprietary schools.
- ✓ Through the State Historical Society, collects, preserves, exhibits and interprets items and properties of historical significance.

Factors Driving the Budget

College Opportunity Fund Program (S.B. 04-189)

In FY 2005-06 the General Assembly changed the funding mechanism for higher education. Senate Bill 04-189 required that direct appropriations for higher education institutions be replaced by a combination of (1) stipends for students and (2) "fee-for-service" contracts. Collectively the stipends and fee-for-service contracts are referred to here as the College Opportunity Fund (COF) Program. No other state uses this mechanism for funding higher education.

Stipends: Stipends can be used by eligible undergraduate students to attend any of the twenty-six state-operated institutions. In limited circumstances students may also receive a stipend to attend a private institution. The stipend to attend private institutions is worth half as much as the stipend to attend state-operated institutions. To use a stipend at a private institution, a student must qualify for the need-based federal Pell grant. They must also attend a participating private, non-sectarian, accredited, baccalaureate college. Currently the University of Denver and Regis University are the only participating private institutions.

The amount of the flat-rate, per-credit-hour stipend is determined annually by the legislature through the budget process. Stipends may only be used for tuition payments. The total amount required for student stipends, and the amount each higher education institution earns from student stipend payments, is the product of the number of eligible student credit hours and the stipend rate set by the General Assembly. The table below summarizes the stipend payments since the program began. Between FY 2005-06 and FY 2006-07 there was a change in the stipend eligibility criteria.

Stipends for Students at State-supported Institutions							
FY 05-06 FY 06-07 FY 07-08							
Stipend per Credit Hour	\$80.00	\$86.00	\$89.00				
Stipend for full-time student	\$2,400.00	\$2,580.00	\$2,670.00				
Stipend-eligible SFTE	113,251.3	121,087.3	122,154.8				
Stipend payments	\$271,803,110	\$312,405,160	\$323,117,640				

Fee-for-service contracts: With money appropriated by the General Assembly, the Colorado Commission on Higher Education may purchase higher education services from the state institutions of higher education through fee-for-service contracts. Pursuant to Section 23-5-130, C.R.S., the Commission may purchase:

- ✓ Educational services in rural areas or communities where the cost of educational services is not sustained by tuition;
- ✓ Educational services required to meet reciprocal agreements with other states;
- ✓ Graduate school services:
- ✓ Educational services that increase economic development opportunities in the state, including career development and retraining; and,
- ✓ Specialized educational services and professional degrees and programs that address identified state or national priorities.

The table below summarizes the FY 2007-08 fee-for-service contracts.

Relationship of fee-for-service contracts to stipends and tuition: The flat-rate stipends, the student's share of tuition, and other revenues available to the institution cover a varying amount of the costs of undergraduate education at each institution. The remaining revenue from these sources is applied toward the types of educational services that are purchased through the fee-for-service contracts. For this reason, the relationship of the fee-for-service contract amount to the cost of the service being purchased can not be seen without taking into account all of the revenues available to the higher education institution. The sum of stipends and fee-for-service contracts is the total state support that makes its way to the institutions through the COF Program. The table below summarizes the state support versus tuition at each governing board.

		State Support			
	TOTAL	(Stipends+Fee-for-	service)	Tuition	
Governing Board	State+Tuition	Dollars Percent		Dollars	Percent
Adams State College	\$20,122,885	\$13,624,080	67.7%	\$6,498,805	32.3%
Western State College	\$20,493,556	\$11,355,691	55.4%	\$9,137,865	44.6%
Community Colleges	\$258,067,278	\$132,329,692	51.3%	\$125,737,586	48.7%
Mesa State College	\$43,845,881	\$22,376,340	51.0%	\$21,469,541	49.0%
Metro State College of Denver	\$90,584,244	\$44,644,910	49.3%	\$45,939,334	50.7%
University of Northern Colorado	\$93,990,123	\$41,156,170	43.8%	\$52,833,953	56.2%
Colorado State University	\$306,217,083	\$133,789,929	43.7%	\$172,427,154	56.3%
Fort Lewis College	\$34,964,754	\$11,653,935	33.3%	\$23,310,819	66.7%
Colorado School of Mines	\$67,534,680	\$21,737,271	32.2%	\$45,797,409	67.8%
University of Colorado	\$677,141,940	\$194,986,340	28.8%	\$482,155,600	71.2%
TOTAL	\$1,612,962,424	\$627,654,358	38.9%	\$985,308,066	61.1%

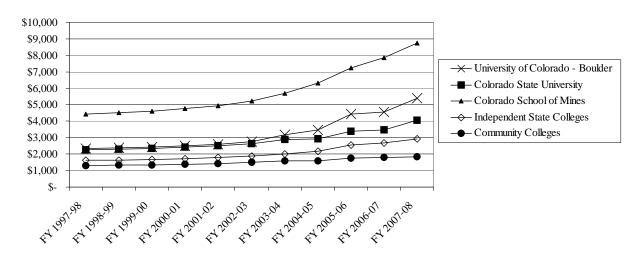

Performance Contracts: As a condition of participation in the College Opportunity Fund Program, higher education institutions must negotiate performance contracts with CCHE. Performance contracts are *not* the same thing as fee-for-service contracts. The performance contracts establish parameters for measuring the success of higher education institutions in meeting statewide goals. The performance contracts can also delegate certain functions to the governing boards that were previously administered statewide, or regulated by CCHE.

Enterprise Status: Senate Bill 04-189 provided a mechanism for designating qualifying institutions as enterprises, so that tuition and other cash fund revenue used by the institutions is exempt from limitations imposed by TABOR. To achieve enterprise status under TABOR a program must: 1) be a government-owned business; 2) have authority to issue revenue bonds; and 3) receive less than 10 percent of annual revenue from state and local grants. Senate Bill 04-189 stated that stipends and fee-for-service contracts are not state grants for TABOR purposes. In the case of stipends, the payments are on behalf of students who have choice in where to apply the funds, and thus the benefit to higher education institutions is indirect. In the case of fee-for-service contracts, a market exchange occurs where services are provided and paid for at a rate sufficient for the independent operation of the enterprise. The final determination of whether a higher education institutions qualifies for enterprise status is made at the end of each fiscal year when actual revenues from state grants are compared to the 10 percent threshold.

Tuition

Tuition rates are a central consideration in discussions about access and affordability. The total projected tuition revenues for the governing boards influences legislative decisions about how much General Fund to appropriate for stipends and fee-for-service contracts. The table below charts tuition rates at selected institutions over the last 10 years.

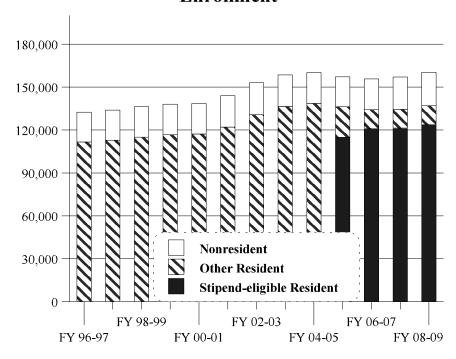

Resident, Undergraduate, Full-time Tuition Rates

Enrollment

Enrollment is both a workload and performance measure for the campuses, and it affects tuition and stipend revenue. For a few schools, nonresident enrollment is important in terms of total revenues, since nonresident tuition helps subsidize resident education. Enrollment tends to be counter-cyclical. In other words, when the economy slows higher education enrollment increases. The table below charts enrollment trends.

Enrollment

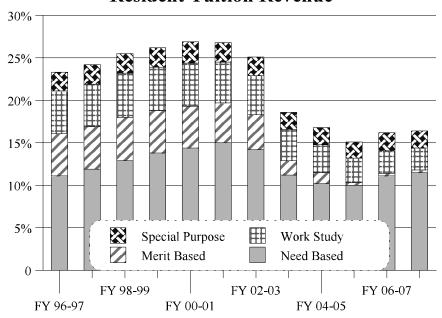

Financial Aid

Of the General Fund appropriation for higher education in FY 2007-08, \$95.2 million (12.8 percent) is for financial aid. The three major, broad-based Colorado financial aid programs are (1) need based aid, (2) merit based aid, and (3) work study. There are also a number of smaller, special purpose financial aid programs. Financial aid funds are appropriated to CCHE and then allocated to the institutions based on formulas that consider financial need at the schools, total student enrollment, and program eligibility criteria.

The following table shows General Fund appropriations for financial aid as a percentage of resident tuition revenues over time. The table provides an indication of the buying power of financial aid appropriations. However, it should be noted that financial aid is used for more than paying tuition. It also helps pay for expenses related to room, board, transportation, student fees, and learning materials. Also, the table does not take into account changes in the economic circumstances of the overall student population, including the number of students with financial need and the amount of need for those students.

State Financial Aid as a Percentage of Resident Tuition Revenue

State financial aid programs trail federal financial aid distributions in Colorado. The most recent year of data shows federal Pell Grants to the neediest students attending Colorado schools totaled \$141.4 million in FY 2005-06. Federal guaranteed loan programs provided another \$834.6 million for students and their parents.

Another source of funding for financial aid is money set aside by the institutions. Some of the money comes from fund-raising, but the majority comes from the operating budgets of the schools. There is significant variation in the amount of money available by institution based on differences in school policies and fund raising. The total institutional financial aid available in the state in FY

2005-06 was \$250.9 million. Senate Bill 04-189 implemented a new requirement that higher education institutions increase need based institutional financial aid by an amount equal to 20 percent of any increase in tuition revenues in excess of inflation.

Summary of Major Legislation

✓ S.B. 07-97 (Fitzgerald/Madden)Tobacco Settlement Payments: Reallocates the portion of the tobacco settlement money received by the state pursuant to the Master Settlement Agreement that was previously credited to the General Fund and Tobacco Litigation Settlement Trust Fund. The bill allocates these moneys as follows:

Program	Percentage
University of Colorado Health Sciences Center	49.0%
Mental Health Services for Juvenile and Adult Offenders	12.0%
Indigent Health Care Provided by Rural and Public Hospitals	8.5%
Local Public Health Services	7.0%
Increase Eligibility in the Children's Basic Health Plan from 200 percent to 205 percent of the Federal Poverty Level	5.0%
Supplement State Contribution for Group Benefit Plans	4.5%
Colorado Immunization Program	4.0%
Expansion of Alcohol and Drug Abuse programs	3.0%
Short-term Grants for Innovative Health Programs	6.0%
Offset Medicaid Shortfall at Children's Hospital	1.0%
Total	100.0%

The combined impact of S.B. 07-97 and H.B. 07-1359 provided \$8,393,149 from the Tobacco Settlement Agreement to the University of Colorado Health Sciences Center in FY 2007-08.

S.B. 07-182 (Bacon/Pommer) Innovative Higher Education Research Fund: Creates the Higher Education Competitive Research Authority to administer the Innovative Higher Education Research Fund (the Fund). Requires forty percent of moneys that previously flowed from the Waste Tire Recycling Development Cash Fund to the Advanced Technology Fund to be transferred to the Innovative Higher Education Research Fund. Directs the Authority to provide matching grants from the Fund to Colorado public institutions of higher education for federally sponsored research projects. Requires the authority to provide an annual report on the research projects funded from the fund to the education committees of the House of Representatives and the Senate. Appropriates \$901,854 from the Fund to the Department of Higher Education in FY 2007-08, for distribution to the Higher Education

Competitive Research Authority. Reduces FY 2007-08 appropriations from the Advanced Technology Fund to the Department of Higher Education by \$825,000.

Transfers control of the Advanced Technology Fund from the Colorado Commission on Higher Education to the Pollution Prevention Advisory Board in the Department of Public Health and Environment and continuously appropriates the moneys in the Advanced Technology Fund to the Department of Public Health and Environment. Requires the Advisory Board to develop criteria for making research grants from the Advanced Technology Fund for specified purposes and to make the research grants therefrom. Includes, for informational purposes, a \$495,000 cash funds exempt appropriation from the Advanced Technology Fund to the Department of Public Health and Environment for FY 2007-08 to reflect the amount that is anticipated to be available for expenditure by the Pollution Prevention Advisory Board.

- ✓ H.B. 07-1096 (Fischer/Bacon) Colorado Water Resources Research Institute: For the 2007-08 fiscal year, appropriates from the Operational Account of the Severance Tax Trust Fund \$150,000 to the Department of Higher Education to be used by the Colorado Water Resources Research Institute.
- ✓ H.B. 07-1163 (McNulty/Copp) In-state Tuition for Military: Makes a member of the armed forces, or a dependent of the member, eligible for in-state tuition status if the member is transferred to Colorado on a temporary assignment of duty. Gives all members of the Colorado National Guard, and their dependents, in-state tuition status. Provides that persons eligible for in-state tuition solely because of a person's status as a member of the armed forces or Colorado National Guard are not eligible for a stipend under the college opportunity program. Decreases cash funds exempt appropriations to the Department of Higher Education for tuition by \$120,437.
- H.B. 07-1256 (Massey & Butcher/Williams)In-state Tuition Economic Development Incentive: Permits an institution of higher education to provide in-state tuition status to a student who moves to Colorado as a result of the student's employer or the student's parent's employer moving to Colorado pursuant to an incentive from the Office of Economic Development or an incentive from a local government. Permits an institution to provide in-state tuition status to a student who moves to Colorado as a result of the student's parent taking a faculty position at a Colorado institution of higher education. Requires the institution to develop a verification process to provide students in-state tuition under these provisions. Prohibits a student receiving in-state tuition pursuant to this provision from receiving state financial aid. In FY 2007-08, appropriates \$20,826 General Fund to the Department of Higher Education, College Opportunity Fund for an estimated 7.8 additional stipend-eligible SFTE as a result of the bill. Also, appropriates \$38,879 cash funds exempt from student stipend payments and resident tuition to the State Board of Community Colleges and Occupational Education State System Community Colleges.

- ✓ H.B. 07-1359 (Buescher/Fitzgerald) Tobacco Settlement Payments: Accelerates the use of a portion of the moneys that Colorado receives under the Master Settlement Agreement (MSA) and makes up to \$24.4 million of MSA moneys available prior to April 16, 2008, to pay for FY 2006-07 and FY 2007-08 overexpenditures and supplementals of the Children's Basic Health Plan and the Colorado Benefits Management System. Alters the appropriations in the FY 2007-08 Long Bill and in S.B. 07-97 to most MSA supported programs. The combined impact of S.B. 07-97 and H.B. 07-1359 provided \$8,393,149 from the MSA to the University of Colorado Health Sciences Center in FY 2007-08.
- ✓ S.B. 06-49 (Bacon/Lindstrom) Transfer of Council on the Arts to the Governor's Office: Transfers administration of the Council on the Arts from the Department of Higher Education to the Office of Economic Development in the Governor's Office.
- ✓ H.B. 06-1399 (Hall/Tapia) Transfers from Stipends to Fee-for-service: If there are moneys remaining in the College Opportunity Fund after the last academic term of a state fiscal year, allows a governing board of an institution of higher education to expend up to three percent of the amount originally authorized as stipends for fee-for-service contracts. Authorizes the Department to transfer general fund spending authority from stipends to fee-for-service contracts in an equivalent amount to fulfill its fee-for-service contract obligations.
- S.B. 05-132 (Windels/Paccione) College Opportunity Fund Program Clarifications: Specifies that a student who is eligible to receive a stipend may receive a stipend for graduate-level courses that apply toward the student's undergraduate degree. Requires the Colorado student loan program to reduce the amount of the stipend per credit hour for all students, subject to Joint Budget Committee approval, if moneys in the College Opportunity Fund in any fiscal year are not sufficient to pay the rate per credit hour established by the General Assembly. Effective July 1, 2006, allows an eligible student to receive a stipend payment for basic skills courses, courses taken under the "Postsecondary Enrollment Options Act", and high school fast-tracks courses. Correspondingly, repeals the ability of a governing board to receive fee-for-service contract payments for these courses. Allows the Colorado student loan program to charge a one-time fee to the State Board of Community Colleges and Occupational Education for the actual cost related to the computer system changes necessary to allow stipend payments for these courses.

Authorizes a governing board to approve and commence, without prior approval of the Colorado Commission on Higher Education (CCHE), capital construction projects that are constructed, operated, and maintained without state capital construction or General Fund moneys if the capital construction project costs less than \$1,000,000. Also, authorizes a governing board to approve and commence, without prior approval of the CCHE, capital construction projects that are not constructed with state moneys but may be operated and maintained with state moneys if the project costs less than \$500,000. For the 2004-05 fiscal year, changes the statutorily required reduction in state-funded administrative costs for the

community college's system office (established by H.B. 04-1086) from 35 to 20 percent. Reduces the FY 2005-06 appropriation from indirect cost recoveries for the CCHE by \$8,553 and 0.3 FTE associated with the review of capital construction projects. The saved indirect cost recoveries are then used to offset the need for General Fund elsewhere in the budget (specifically the Division of Occupational Education).

- ✓ S.B. 04-189 (Anderson/King) College Opportunity Fund Program: Replaces subsidies for higher education institutions with stipends for students and fee for service contracts beginning in FY 2005-06. Authorizes governing boards to designate institutions that receive less than 10 percent of their revenue from state and local grants as enterprises under TABOR beginning in FY 2004-05. Requires schools to set aside 20 percent of any increase in tuition rates above inflation for financial aid. Reduces General Fund appropriations and increases tuition appropriations for the University of Colorado by \$4.5 million, dependent on the institution being designated as an enterprise in FY 2004-05.
- ✓ S.B. 03-193 (Reeves/Young) Use of State Historical Fund Moneys: Refinances General Fund appropriations for the Historical Society with limited gaming funds deposited in the State Historical Fund.
- ✓ H.B. 03-1093 (Berry/Teck) Independent State Colleges: Repeals the Board of Trustees of the State Colleges in Colorado and establishes separate governing boards for Adams State College, Mesa State College, and Western State College.
- H.B. 03-1256 (Spradley/Anderson) Lease Purchase Agreements for Fitzsimons and CSP II: Authorizes the Board of Regents of the University of Colorado to enter lease-purchase agreements to finance the construction of academic buildings at the University of Colorado Health Sciences Center (UCHSC) Fitzsimons campus. The lease-purchase agreements may be for terms of up to twenty-five years, and may not exceed a total value of \$202,876,109, plus reasonable administrative, monitoring, and closing costs and interest; annual aggregate rentals may not exceed \$15.1 million. Specifically, the bill authorizes lease-purchase agreements for: Education Facility IB; Education Facility II; Library at Fitzsimons; Academic Office Complex; Environmental Health and Safety II; Facility Support; and, Education Bridge.

Requires UCHSC to enter an agreement with a third-party master developer by June 30, 2006, to dispose of the real estate interests of the University at Ninth Avenue and Colorado Boulevard. The first \$15 million of net proceeds from the property shall be deposited in the General Fund, and thereafter 50 percent is to be deposited in the General Fund and 50 percent retained by the University of Colorado for development of the Fitzsimons campus.

Requires that eight percent of moneys received from the Tobacco Master Settlement Agreement, up to \$8.0 million, be appropriated annually to the Fitzsimons Trust Fund.

Expands the allowable uses of the Fitzsimons Trust Fund to include making payments on any lease-purchase agreement.

Authorizes the Department of Corrections to enter into a lease-purchase agreement for a high-custody correctional facility. The lease-purchase agreement may be for a term of up to fifteen years, and may not exceed a total value of \$102.8 million, plus necessary administrative, monitoring, interest, and closing costs.

H.B. 02-1165 (Chavez/Tate) Independent Metro State College: Transfers governance for Metropolitan State College of Denver (Metro) from the Trustees of the State Colleges to a newly-created independent governing board. Provides a methodology for the Trustees for the State Colleges to transfer funds to Metro in FY 2002-03, and stipulates that beginning in FY 2003-04, the General Assembly shall appropriate funds directly to Metro. Requires the Colorado Commission on Higher Education (CCHE) and the Trustees of the State Colleges to prepare a study of the costs associated with operating the state colleges by July 1, 2002. Instructs CCHE and the State Colleges to use the cost study to establish a minimum level of funding for Adams State College, Mesa State College and Western State College. States that the General Assembly shall appropriate an amount from the General Fund that is adequate to support the minimum level of funding, except in fiscal years where there is an overall reduction in the level of General Fund appropriations for the state-supported institutions of higher education. Allows more than one third of the students admitted to the state colleges to be from out-of-state, if all qualified in-state applicants are accepted.

Major Funding Changes FY 2006-07 to FY 2007-08

	led \$64.1 million in additional tuition spending authority for the governing boards, ing the following increases:
0	7.0 percent for the research institutions;5.0 percent for state colleges; and3.5 percent for the community colleges.
	1 \$48.9 million General Fund for an 8.5 percent increase in the combined stipends and r-service contracts for each governing board;
	led \$8.4 million from the tobacco Master Settlement Agreement for the University of ado Health Sciences Center;
	sed financial aid programs by \$7.4 million, or 8.5 percent, including \$6.9 million for based financial aid;

Added \$1.2 million General Fund for an 8.5 percent increase for the Local District Junior Colleges;
Added \$572,397 General Fund for an 8.5 percent increase for the Area Vocational Schools;
Provided another \$160,000 General Fund for stipends for students attending participating private institutions based on the projected eligible enrollment; and
Reduced General Fund appropriations for the operating budget of the Cumbres and Toltec Scenic Railroad by \$410,000 to match the operating support provided by New Mexico.

(8) Division of Occupational Education

(Primary Functions: Administers and supervises vocational programs and distributes state and federal funds for this purpose. Also, coordinates resources for job development, job training, and job retraining. The cash funds exempt represent transfers from the Office of Economic Development and from the Department of Education for the Colorado Vocational Act.)

FY 2008-09 Joint Budget Committee Staff Budget Briefing Update on footnotes in the FY 2007-08 Long Bill

4 **All Departments, Totals --** The General Assembly requests that copies of all reports requested in other footnotes contained in this act be delivered to the Joint Budget Committee and the majority and minority leadership in each house of the General Assembly.

<u>Comment:</u> Of the footnotes discussed in this briefing, footnotes 38 through 41 requested reports from the Department. The Department has not supplied the reports, and so no copies have been provided to the majority and minority leadership.

All Departments, Totals -- Every Department is requested to submit to the Joint Budget Committee information on the number of additional federal and cash funds exempt FTE associated with any federal grants or private donations that are applied for or received during FY 2007-08. The information should include the number of FTE, the associated costs (such as workers' compensation, health and life benefits, need for additional space, etc.) that are related to the additional FTE, the direct and indirect matching requirements associated with the federal grant or donated funds, the duration of the grant, and a brief description of the program and its goals and objectives.

Comment: The Governor vetoed this footnote on May 2, 2007 on the grounds that it is attached to federal funds and private donations which are not subject to legislative appropriation; placing information requirements on these funds constitutes substantive legislation; and it creates an unfunded administrative burden for the departments. The General Assembly subsequently overode the veto. To the extent that this footnote can be adhered to without adversely impacting executive branch operations or the delivery of services, the Governor directed departments to comply pursuant to the August 16, 2007 letter from the director of the Office of State Planning and Budgeting to the leadership of the General Assembly.

Information on federal grants and private donations is available from the higher education institutions' financial statements, although they do not routinely include information specifically on FTE, or descriptions of each grant as requested by the footnote. Due to the volume, staff did not include the information from the higher education financial statements in this briefing. The Commission and the Historical Society included information about federal- and grant-funded FTE in the budget request, but did not provide the full descriptions of the grants that is requested in the footnote.

Department of Education, Assistance to Public Schools, Categorical Programs; and Department of Higher Education, Division of Occupational Education, Colorado Vocational Act Distributions pursuant to Section 23-8-102, C.R.S. -- The Department of Education is requested to work with the Department of Higher Education and to provide to the Joint Budget Committee information concerning the distribution of state funds available

for each categorical program excluding grant programs. The information for special education - children with disabilities, English language proficiency programs, public school transportation, Colorado Vocational Act distributions, and small attendance center aid is requested to include the following: (a) A comparison of the state funding distributed to each district or administrative unit for each program in fiscal year 2006-07 and the maximum allowable distribution pursuant to state law and/or State Board of Education rule; and (b) a comparison of the state and federal funding distributed to each district or administrative unit for each program in fiscal year 2005-06 and actual district expenditures for each program. The information for special education services - gifted and talented children is requested to include a comparison of the state funding distributed to each district or administrative unit for each program in fiscal year 2005-06 and actual district expenditures.

Comment: This footnote was discussed in detail in the Department of Education briefing.

Department of Higher Education, Colorado Commission on Higher Education, Administration -- The Department should continue its efforts to provide data on the efficiency and effectiveness of state financial aid in expanding access to higher education for Colorado residents. The Department is requested to provide to the Joint Budget Committee by November 1 of each year an evaluation of financial aid programs, which should include, but not be limited to: 1) An estimate of the amount of federal, institutional, and private resources (including tax credits) devoted to financial aid; 2) the number of recipients from all sources; 3) information on typical awards; and 4) the typical debt loads of graduates. To the extent possible, the Department should differentiate the data based on available information about the demographic characteristics of the recipients. To the extent that this information is not currently available, the Department is requested to provide a reasonable estimate, or identify the additional costs that would be associated with collecting the data.

Comment: The Governor vetoed footnotes 38, 40, and 41 on May 2, 2007. After the General Assembly overrode all Long Bill vetoes, the Department was directed not to comply pursuant to the August 16, 2007 letter from the director of the Office of State Planning and Budgeting to the leadership of the General Assembly. According to the letter, the data is not available to the Department in time to meet the November 1st reporting date, and so the Governor instructed the Department to submit the requested reports by January 2, 2008.

For several years in response to this trio of footnotes requesting information about financial aid the Department has either failed to submit the requested reports, or submitted reports that were late and incomplete. In some years, including last year (when the briefing was a full week earlier than this year), the Department has managed to submit responses prior to the staff briefing, or in reaction to a JBC hearing question. Also, the Department has control over the schedule of when institutions must submit data to the Department. Therefore, staff does not understand why the Department continues to insist that the data can not be collected by November 1 to comply with the JBC's budget schedule. The JBC is typically too busy with supplementals and figure settings to analyze and digest a report submitted in January.

Footnote 38 specifically requests that if the requested information is not currently available the Department should provide an estimate of the costs associated with collecting the data.

Staff recommends discussing with the Department:

- 1. Why can't the data requested in footnotes 38, 40, and 41 currently be collected by November 1 each year?
- 2. What would it take to collect the data by November 1 each year, or at least prior to the budget briefing date?
- 3. Does the Department for some reason object to the requests for information contained in footnotes 38, 40, and 41? Does the Department believe that the information is not useful or beyond the statutory duties of the Department?
- 4. Does the Department have suggestions for improving the footnotes (other than delaying the deadline to January)? Does the Department think that there is a better way to analyze and track the performance of financial aid programs?
- Department of Higher Education, Colorado Commission on Higher Education, Administration -- The Department is requested to submit a report to the Joint Budget Committee by November 1, 2007, comparing the retention rates of students receiving Governor's Opportunity Scholarships with retention rates for low-income students receiving other types of financial aid packages.

Comment: The Governor vetoed this footnote on May 2, 2007. After the General Assembly overrode all Long Bill vetoes, the Department was directed not to comply pursuant to the August 16, 2007 letter from the director of the Office of State Planning and Budgeting to the leadership of the General Assembly because the Governor's Opportunity Scholarships are being eliminated. The status of the Governor's Opportunity Scholarships changed several times during the budget process last year. Staff suspects that the inclusion of this footnote was unintentional and had staff brought the footnote to the attention of the Conference Committee the footnote probably would have been eliminated, given the ultimate decision by the legislature to roll the funding for the Governor's Opportunity Scholarships into the Need Based Grants line item.

40 **Department of Higher Education, Colorado Commission on Higher Education, Administration --** The Department is requested to submit a report to the Joint Budget Committee by November 1 each year documenting the base level of institutional financial aid at each institution and demonstrating that at least 20 percent of any increase in undergraduate resident tuition revenues in excess of inflation is being devoted to need-based financial assistance pursuant to section 23-18-202 (3) (c), C.R.S.

Comment: See the comment under footnote 38.

Department of Higher Education, Colorado Commission on Higher Education, Administration -- The Department is requested to submit a report to the House and Senate Education Committees and the Joint Budget Committee by November 1, 2007, analyzing the impact of need based financial aid programs on the recruitment, retention, and academic performance of under-served students, and making recommendations for improvement.

Comment: See the comment under footnote 38.

42 **Department of Higher Education, Colorado Commission on Higher Education, Special Purpose, Enrollment/Tuition and Stipend Contingency --** The Colorado Commission on Higher Education may transfer spending authority from this line item to the Governing Boards in the event that tuition or stipend revenues increase beyond appropriated levels. The spending authority for this line item shall be in addition to the funds appropriated directly to the Governing Boards. The Colorado Commission on Higher Education shall not authorize transfers of spending authority from this line item to support tuition or fee increases.

<u>Comment:</u> This footnote provides guidance on how the Department may use the appropriation.

Department of Higher Education, Colorado Commission on Higher Education Financial Aid, Work Study -- It is the intent of the General Assembly to allow the Colorado Commission on Higher Education to roll forward two percent of the Work Study appropriation to the next fiscal year.

<u>Comment:</u> The footnote provides flexibility for the Department to roll forward work study funds, since employment by some students in the summer of the academic year may occur in the next state fiscal year.

Department of Higher Education, Colorado Commission on Higher Education Financial Aid, Special Purpose, National Guard Tuition Assistance Fund -- It is the intent of the General Assembly that only the minimum funds necessary to pay tuition assistance for qualifying applicants pursuant to section 23-5-111.4, C.R.S. will be transferred to the National Guard Tuition Fund administered by the Department of Military Affairs. Any funds appropriated in this line item that are in excess of the minimum necessary to pay tuition assistance for qualifying applicants may be used for need based financial aid.

<u>Comment:</u> The Department is in compliance with the footnote. The Department is only transferring the minimum necessary to pay tuition assistance for qualifying national guardsmen.

Department of Higher Education, Governing Boards, Trustees of Adams State College; Trustees of Mesa State College; Trustees of Metropolitan State College of Denver; Trustees of Western State College; Board of Governors of the Colorado State University System; Trustees of Fort Lewis College; Regents of the University of Colorado; Trustees of the Colorado School of Mines; University of Northern Colorado; State Board for Community Colleges and Occupational Education State System Community Colleges; and Auraria Higher Education Center -- Notwithstanding the limitations set forth in subsection (3) of section 1 of this act, the FTE reflected in these line items are shown for informational purposes and are not intended to be a limitation on the budgetary flexibility allowed by section 23-1-104 (1) (a) (I), C.R.S.

<u>Comment:</u> This footnote expresses legislative intent with regard to FTE.

- Department of Higher Education, Governing Boards, Trustees of Adams State College; Trustees of Mesa State College; Trustees of Metropolitan State College of Denver; Trustees of Western State College; Trustees of Fort Lewis College -- Undergraduate resident tuition credit hour rate increases are limited to 5%. However, for four-year institutions, governing boards have the option to set tuition levels within a 5% total tuition revenue limit, provided that all resident undergraduate students with any unmet need (i.e., Levels 1, 2 and 3) receive sufficient financial aid to cover any increase in unmet need resulting from an increase in tuition credit hour rates above 5%. These limitations are intended to restrict resident tuition rate increases. It is the intent of the General Assembly that institutions may increase nonresident tuition rates to reflect market conditions and that any additional spending authority necessary for nonresident tuition rate increases will be addressed through a supplemental appropriation during the 2008 legislative session. The General Assembly will not back-fill lost revenue from nonresident tuition if governing boards increase nonresident tuition rates above market conditions.
- Department of Higher Education, Governing Boards, Board of Governors of the Colorado State University System; Regents of the University of Colorado; Trustees of the Colorado School of Mines; University of Northern Colorado -- Undergraduate resident tuition credit hour rate increases are limited to 7%. However, for research institutions, governing boards have the option to set tuition levels within a 7% total tuition revenue limit, provided that all resident undergraduate students with any unmet need (i.e., Levels 1, 2 and 3) receive sufficient financial aid to cover any increase in unmet need resulting from an increase in tuition credit hour rates above 5%. These limitations are intended to restrict resident tuition rate increases. It is the intent of the General Assembly that institutions may increase nonresident tuition rates to reflect market conditions and that any additional spending authority necessary for nonresident tuition rate increases will be addressed through a supplemental appropriation during the 2008 legislative session. The General Assembly will not back-fill lost revenue from nonresident tuition if governing boards increase nonresident tuition rates above market conditions.
- <u>48</u> **Department of Higher Education, Governing Boards, Regents of the University of Colorado --** Of the amount appropriated to the Regents of the University of Colorado, it is the intent of the General Assembly that \$104,189,992 shall be for the University of Colorado

Health Sciences Center, including \$1,223,762 from student stipend payments, \$61,329,192 from fee-for-service contracts, \$38,157,595 from the students' share of tuition, and \$3,479,443 from academic fees and academic facility fees.

<u>Comment:</u> The FY 2007-08 estimated expenditures in the budget data book submitted by the University of Colorado do not show compliance with the footnote:

	Footnote	Budget Data Book	More/(Less) than Footnote
TOTAL	\$104,189,992	\$111,163,671	\$6,973,679
Stipends	\$1,223,762	\$1,184,033	(\$39,729)
Fee-for-service	\$61,329,192	\$61,368,920	\$39,728
Student's share tuition	\$38,157,595	\$38,196,293	\$38,698
Academic fees	\$3,479,443	\$10,414,425	\$6,934,982

Staff recommends discussing with the Department why they aren't in compliance with this footnote.

Department of Higher Education, Governing Boards, State Board for Community Colleges and Occupational Education State System Community Colleges -- Undergraduate resident tuition credit hour rate increases are limited to 3.5%. These limitations are intended to restrict resident tuition rate increases. It is the intent of the General Assembly that institutions may increase nonresident tuition rates to reflect market conditions and that any additional spending authority necessary for nonresident tuition rate increases will be addressed through a supplemental appropriation during the 2008 legislative session. The General Assembly will not back-fill lost revenue from nonresident tuition if governing boards increase nonresident tuition rates above market conditions.

FY 2008-09 Joint Budget Committee Staff Budget Briefing DEPARTMENT OF HIGHER EDUCATION

ISSUE:

Tuition increases implemented by the governing boards, and compliance with legislative intent

SUMMARY:

- Footnotes 46, 47, and 49 in the FY 2007-08 Long Bill limited increases in resident tuition revenue generated by the Governing Boards to:
 - 7.0 percent of total revenue for CU, CSU, Mines, and UNC
 - 5.0 percent of total revenue for the other 4-year institutions
 - 3.5 percent over the prior year per-credit-hour rate for the Community Colleges.
- A revenue limit, as opposed to a rate limit, allows institutions to apply different rate increases to different classes of students, as long as the total projected revenue fits within the limit.
 - O Compliance with revenue limits can be difficult to track because it requires an interpretation of whether the enrollment assumptions were reasonable.
 - Higher education institutions typically prefer revenue limits over rate limits, and there is some historical statutory basis for using revenue limits rather than rate limits.
- Higher education institutions didn't really take advantage of the flexibility a revenue limit
 provides versus a rate limit until governing boards began changing the full-time tuition
 window.
 - O Many institutions charge students per credit hour up to a threshold beyond which additional credit hours are free. The free credit hours are referred to as the full-time tuition window. When an institution closes the full-time tuition window it charges full-time students for more credit hours than it did in the prior year.
- The tuition footnotes in the FY 2007-08 Long Bill allowed governing boards to calculate the resident tuition revenue limit based on total resident and nonresident tuition.
 - There is no policy basis for indexing the allowable resident tuition increase to total tuition, but that is the way the footnote was written.
 - The way the footnote was written does not promote transparency in budgeting.

RECOMMENDATION:

Staff recommends that in the future the General Assembly express its intent with regard to tuition in the form of a rate limit, rather than a revenue limit, to reduce confusion.

DISCUSSION:

In footnotes 46, 47, and 49 to the FY 2007-08 Long Bill, the General Assembly expressed its intent with regard to tuition increases. The instructions for the research institutions (CU, CSU, Mines, and UNC) were as follows:

Undergraduate resident tuition credit hour rate increases are limited to 7%. However, for research institutions, governing boards have the option to set tuition levels within a 7% total tuition revenue limit, provided that all resident undergraduate students with any unmet need (i.e., Levels 1, 2 and 3) receive sufficient financial aid to cover any increase in unmet need resulting from an increase in tuition credit hour rates above 5%. These limitations are intended to restrict resident tuition rate increases. It is the intent of the General Assembly that institutions may increase nonresident tuition rates to reflect market conditions and that any additional spending authority necessary for nonresident tuition rate increases will be addressed through a supplemental appropriation during the 2008 legislative session. The General Assembly will not back-fill lost revenue from nonresident tuition if governing boards increase nonresident tuition rates above market conditions.

The footnote for the other 4-year institutions was identical, except that the rate and revenue limits in the first two sentences were 5 percent rather than 7 percent. For the community colleges the rate cap was 3.5 percent and there was no option to use a revenue limit.

Revenue limit versus a rate limit

A rate limit is relatively easy to understand. If the tuition charge for a full-time student is \$4,000 and the limit on rate increases is 5.0 percent, then the maximum new charge is \$4,200. A revenue limit caps the income an institution can generate from tuition. Indirectly this limits the rates that the institution can charge, but it offers some flexibility to an institution that implements different tuition rates for different classes of students. For example, with a 5.0 percent revenue limit an institution might raise a \$4,000 tuition rate by 10 percent to \$4,400 for business students, and then compensate by holding the tuition rate increase for all other students to something less than 5.0 percent. Because the number of business students is small compared to the rest of the student population, the institution might only need to shave a fraction off of the tuition rate increase for the remaining student body, like a 4.9 percent increase rather than a 5.0 percent increase.

It is difficult to track compliance with a revenue limit. Setting a revenue limit requires some assumptions about enrollment. If the General Assembly makes a forecast of enrollment and the enrollment forecast is wrong, it is unlikely that the General Assembly would want to punish an institution for exceeding its revenue limit due to a faulty forecast. The General Assembly forecasts the total student body, but it doesn't forecast the business school population. If an institution makes a good faith projection that a 10 percent increase in tuition for business students and a 4.9 percent increase for the remaining population will generate a total 5.0 percent revenue increase, it could be

wrong and end up exceeding the revenue limit. Meanwhile, another institution could intentionally manipulate assumptions about the business school enrollment versus the remaining enrollment and end up exceeding the revenue cap because they used unrealistic data. How does the legislature distinguish between the institution that makes a good faith effort and the institution that exploits the flexibility of a revenue limit?

There is some historical statutory basis for the legislature to express tuition limits in the form of a revenue limit rather than a rate limit. Subsequent to the passage of TABOR, the General Assembly asserted in Section 23-1-103.5, C.R.S. that it has an interest in limiting higher education revenues that count toward the TABOR limit. That section of statute prohibits governing boards from raising more revenue than the appropriation in the Long Bill from sources that count against the TABOR limit. In concert with that statute, several governing boards (although not all) were given specific statutory authority to set tuition. For example, the statutory authorization for CSU in Section 23-31-107, C.R.S. says, "The board of governors of the Colorado state university system shall fix tuition in accordance with the level of cash fund appropriations set by the general assembly for the university pursuant to section 23-1-103.5." Section 23-1-103.5, C.R.S. is somewhat obsolete now that the governing boards have been designated as enterprises and their tuition no longer counts toward the TABOR limit. The statute has been replaced by Section 23-5-129, C.R.S. that says the general assembly retains the authority to approve tuition spending authority for the governing boards, and by Section 23-18-202 (3) (b), C.R.S. that says, "The tuition increases from which the general assembly derived the total cash spending authority for each governing board shall be noted in a footnote in the annual general appropriations act."

If given the choice between a revenue limit and a rate limit, the governing boards typically argue for a revenue limit, because that preserves the most flexibility and authority for the governing boards. However, for at least a decade prior to FY 2003-04 staff only knows of one governing board using different tuition rate increases for different segments of the student body. The governing board that differentiated tuition was CU, and for the most part CU didn't take advantage of the revenue limit versus a rate limit to create the differentiation in tuition. Rather, CU requested and received specific legislative authorization in the tuition footnote to create the different tuition classifications. The percentage increases in tuition rates implemented by the other higher education institutions were at or below the allowable percentage increases in revenue expressed in the tuition footnote, and so in practice there was little difference between a rate limit and a revenue limit.

Closing the tuition window

In FY 2003-04, CSU-Pueblo increased the threshold at which they stopped charging full-time students for additional credit hours. They "closed the tuition window" and charged full-time students for one more credit hour than they had the year before. They accomplished this within the overall revenue limit for the governing board by limiting rate increases at CSU-Fort Collins. This is similar to the example above of a differential rate increase for business students versus the rest of the population, except that in this case there was a differential rate increase for full-time students at CSU-Pueblo versus part time students at that campus and all students at the Fort Collins campus.

In FY 2004-05, several governing boards followed the example of CSU-Pueblo the year before and closed the tuition window. However, these other governing boards did not balance out the increased revenue by holding tuition rate increases down for students not affected by the window closure. It turned out to be a year when the state owed a TABOR refund and the only governing board that qualified for enterprise status was the University of Colorado (the COF Program was not implemented until FY 2005-06). The additional revenue from tuition increases implemented by the governing boards increased the TABOR refund, and thereby reduced the General Fund available for operating expenditures. The impact on the state's operating budget would have been almost the same if the governing boards had just authorized a General Fund increase for themselves.

Although the institutions that closed the tuition window appeared to be in clear violation of the legislative intent, at supplemental time the General Assembly provided the necessary additional tuition spending authority, rather than taking punitive action. General Fund adjustments were made elsewhere in the budget to balance to the available revenue. Legislators may have been persuaded that the higher education institutions were acting in desperation, given the General Fund reductions in prior years, and the fact that for FY 2004-05 the Long Bill didn't provide any General Fund increase for the governing boards and limited tuition increases to 1.1 percent for institutions that did not qualify for enterprise status (everyone except CU).

Staff believes that the experience in FY 2004-05 has emboldened governing boards to take a liberal interpretation of legislative intent with regard to tuition. All of the governing boards except the Community Colleges, which have a linear tuition scale, have made adjustments to tuition charges for full-time students versus part-time students. Some higher education policy makers argue that a full-time tuition window, where students pay per credit hour up to a threshold where additional credit hours are free, provides an economic incentive for students to take a full-time course load and graduate in four years. Other higher education policy makers argue that maintaining a full-time tuition window unfairly burdens part-time, working students, who end up paying a higher cost per credit hour than they would otherwise. This is why the Community Colleges charge the same amount for every credit hour, regardless of the number of credit hours taken. Notwithstanding policy reasons for having a tuition window or not, staff believes that the changes in the tuition structure per credit hour at Colorado institutions in recent years have been implemented primarily as a means of generating more revenue.

Notably, one of the institutions that did not close the tuition window in FY 2004-05 was CSU-Fort Collins. It adhered to the legislatively mandated 1.1 percent increase that year. The impact on the TABOR refund if CSU-Fort Collins had closed the tuition window would have been much more dramatic than the impact from the smaller institutions that did close the full-time tuition window. CSU-Fort Collins' decision to play by the rules in FY 2004-05 put it at a competitive disadvantage relative to higher education institutions that violated the tuition footnote. It's possible that this experience played a role in how CSU-Fort Collins approached tuition increases in FY 2007-08.

Are the governing boards in compliance with the FY 2007-08 tuition footnote?

The table below illustrates the increases in annual tuition rates implemented by the governing boards for resident, undergraduate, full-time (15 credit hours per semester) students.

Institution	FY 2006-07 Resident Tuition (30 CHRS)	FY 2007-08 Resident Tuition (30 CHRS)	Dollar Difference	Percent Difference	Overall Tuition Revenue Limit Category

How did the governing boards justify these tuition increases given the language of the footnote? Here is how some governing boards parsed the footnote:

Footnote language	Interpretation
Undergraduate resident tuition credit hour rate increases are limited to 7% [5% for 4-year institutions and 3.5% for community colleges].	This is a rate limit, but it only applies to the per-credit-hour rate. An institution could still close the full-time tuition window. The second sentence offers an alternative way to calculate the allowable tuition increase for research and 4-year institutions. Most institutions took advantage of the alternative calculation.
However, for research institutions [4-year institutions], governing boards have the option to set tuition levels within a 7% [5%] total tuition revenue limit,	This is a revenue limit. Significantly, it applies to total tuition. This means that a governing board could apply different tuition increases for resident students versus nonresident students, as long as the total increase complied with the relevant 7% or 5% limit. If an institution wanted to implement a 14 percent increase for residents and no increase for nonresidents, this sentence would allow it, if the total revenue generated didn't exceed the limit.
provided that all resident undergraduate students with any unmet need (i.e., Levels 1, 2 and 3) receive sufficient financial aid to cover any increase in unmet need resulting from an increase in tuition credit hour rates above 5%.	This is a condition if the governing board uses the revenue limit to calculate the allowable tuition increase. Staff is unsure how to measure compliance. Can an institution reallocate existing financial aid resources to claim that they have met this condition? However, the Department has come up with a methodology and reports that all governing boards are meeting this condition.
These limitations are intended to restrict resident tuition rate increases. It is the intent of the General Assembly that institutions may increase nonresident tuition rates to reflect market conditions and that any additional spending authority necessary for nonresident tuition rate increases will be addressed through a supplemental appropriation during the 2008 legislative session.	Some institutions have interpreted this to mean that the text of the footnote to this point only applies to resident tuition, and the governing boards are free to do whatever the market will bear with regard to nonresident tuition. This interpretation is controversial. However, it should be noted that this doesn't give the institutions any more flexibility with regard to resident tuition than is theoretically possible if these two sentences were not part of the footnote. However, this interpretation does mean that rather than having to hold nonresident tuition increases to zero to accomplish the maximum resident tuition increase, the institutions can implement the maximum resident tuition to market levels.
The General Assembly will not back-fill lost revenue from nonresident tuition if governing boards increase nonresident tuition rates above market conditions.	This puts the institutions on notice that if they misjudge the nonresident market and price themselves too high, the General Fund will not backfill lost revenue.

Staff has not heard anyone argue that there is a logical basis for using total tuition as an index for the allowable increase in resident tuition. However, staff agrees with the institutions that the language of the footnotes allows institutions to take this approach. With this interpretation of the footnotes, staff doesn't have any reason to question the enrollment assumptions or calculations of the governing

10-DEC-07 44 HED-brf

boards that these undergraduate resident tuition increases when combined with graduate resident increases will comply with the revenue limits expressed in the footnotes.

The text of the footnotes is undeniably torturous and confusing. Staff believes that the way the footnotes were written does not promote transparency in budgeting. However, staff has no basis for commenting on whether the footnotes came out the way they did as a result of a deliberate attempt by parties involved to mislead legislators or the public, or a series of compromises with many cooks putting a spoon in the pot. JBC members will need to decide whether the responses of the institutions to the footnote comply with the intent of the JBC.

Staff believes that a rate limit is far less confusing than a revenue limit. To reduce confusion and the risk of misinterpretation of the General Assembly's intent, **staff recommends that the JBC consider expressing its intent in the form of a rate limit rather than a revenue limit.** However, this may be easier said than done. A look at the tuition footnotes in prior years reveals that FY 2007-08 was not unique in the degree of convolution.

FY 2007-08

Undergraduate resident tuition credit hour rate increases are limited to 7%. However, for research institutions, governing boards have the **option to set tuition levels within a 7% total tuition revenue limit**, provided that all resident undergraduate students with any unmet need (i.e., Levels 1, 2 and 3) receive sufficient financial aid to cover any increase in unmet need resulting from an increase in tuition credit hour rates above 5%. These limitations are intended to restrict resident tuition rate increases. It is the intent of the General Assembly that institutions may increase nonresident tuition rates to reflect market conditions and that any additional spending authority necessary for nonresident tuition rate increases will be addressed through a supplemental appropriation during the 2008 legislative session. The General Assembly will not back-fill lost revenue from nonresident tuition if governing boards increase nonresident tuition rates above market conditions.

FY 2006-07

It is the intent of the General Assembly that no governing board increase the **tuition credit hour rate for resident undergraduate students more than 2.5 percent**. These rates are used in order to
increase spending authority for program enhancements and this is not an attempt by the General
Assembly to set tuition policy. Each governing board will give consideration to establishing equity
of tuition increases among the campuses and programs under the governing board's jurisdiction.

FY 2005-06

The tuition increases from which the General Assembly derived the total cash spending authority for each governing board are **based on the requested amounts submitted by the institutions** as approved by the Colorado Commission on Higher Education, **except that** tuition spending authority for the University of Colorado includes an additional \$1,603,118 for investment in merit based aid.

FY 2004-05

It is the intent of the General Assembly that each governing board may increase tuition rates by an amount calculated to generate **up to a maximum of 1.1 percent additional revenue from resident students**, not including the effects of enrollment changes; **except that**, if legislation allowing designation of institutions of higher education as enterprises is enacted by the Sixty-fourth General Assembly and becomes law, **the governing board of an institution or group of institutions that is designated as an enterprise** pursuant to such legislation may increase the tuition rates for the institution or group of institutions by an amount calculated to generate up to a maximum of **eight**

percent additional revenue from resident and non-resident students not including the effects of enrollment changes. Of said eight percent additional revenue, spending authority for one and one-tenths percent additional revenue shall be from the appropriation in this section, and spending authority for six and nine-tenths percent additional revenue shall be from the appropriation in section 15 of this act. These rates are used in order to increase spending authority for program enhancements and this is not an attempt by the General Assembly to set tuition policy. Each governing board will give consideration to establishing equity of tuition increases among the campuses and programs under the governing board's jurisdiction.

FY 2003-04

It is the intent of the General Assembly that each governing board may increase tuition rates by an amount calculated to generate up to a maximum of 10 percent additional revenue from resident students not including the effects of enrollment changes. These rates are used in order to increase spending authority for program enhancements and this is not an attempt by the General Assembly to set tuition policy. Each governing board will give consideration to establishing equity of tuition increases among the campuses and programs under the governing board's jurisdiction. In addition to the tuition increases outlined above, the General Assembly has approved an additional \$7,643,990 in tuition spending authority for the Regents of the University of Colorado as follows: \$1,100,000 for tuition rate increases in programs associated with the college of business at the Boulder campus; \$435,904 for nursing, doctor of medicine, physical therapy, and doctor of dental surgery programs at the Health Sciences Center; and \$6,108,086 for the "Quality for Colorado" initiative at the Boulder campus.

FY 2002-03

It is the intent of the General Assembly that each governing board, except the Community Colleges, may increase tuition rates by an amount calculated to generate up to a maximum of 7.7 percent additional revenue from resident students and up to a maximum of 7.7 percent additional revenue from nonresident students, not including the effects of enrollment changes. It is the intent of the General Assembly that the Community Colleges may increase tuition rates by an amount calculated to generate up to a maximum of 5.7 percent additional revenue from resident students and up to a maximum of 7.7 percent additional revenue from nonresident students, not including the effects of enrollment changes. These rates are used in order to increase spending authority for program enhancements and this is not an attempt by the General Assembly to set tuition policy. Each governing board will give consideration to establishing equity of tuition increases among the campuses and programs under the governing board's jurisdiction. In addition to the tuition increases outlined above, the General Assembly has approved an additional \$3,274,351 in tuition spending authority for the Regents of the University of Colorado as follows: \$842,384 for various tuition rate increases at the Colorado Springs campus; \$933,800 for various tuition rate increases at the Denver campus; \$1,097,000 for tuition rate increases in programs associated with the college of business at the Boulder campus; and \$401,167 for nursing, doctor of medicine, physical therapy, and doctor of dental surgery programs at the Health Sciences Center. Also, the General Assembly has approved an additional \$878,422 in tuition spending authority for the State Board of Agriculture for programs associated with the college of veterinary medicine at Colorado State University.

FY 2001-02

It is the intent of the General Assembly that each governing board may increase tuition rates by an amount calculated to generate up to a maximum of 4.0 percent additional revenue from resident students and up to a maximum of 5.0 percent additional revenue from nonresident students, not including the effects of enrollment changes. These rates are used in order to increase spending authority for program enhancements and this is not an attempt by the General Assembly to set tuition policy. Each governing board will give consideration to establishing equity of tuition increases among the campuses and programs under the governing board's jurisdiction. In addition to the tuition

increases outlined above, the General Assembly has approved an additional \$2,762,154 in tuition spending authority for the University of Colorado for the following: at the Colorado Springs campus for resident and nonresident undergraduate and graduate tuition; at the Denver campus for resident undergraduate freshman and sophomore tuition and for junior and senior College of Liberal Arts and Sciences, engineering, and business tuition; at the Boulder campus for resident and nonresident undergraduate tuition and graduate business tuition.

FY 2000-01

It is the intent of the General Assembly that **the resident tuition rates by Governing Board be raised up to 2.9 percent** and nonresident tuition rates by Governing Board be raised up to 4.0 percent. These rates are used in order to increase spending authority for program enhancements and this is not an attempt by the General Assembly to set tuition policy. Each Governing Board will give consideration to establishing equity of tuition increases among the campuses under the Governing Board's jurisdiction. **In addition** to the tuition increases outlined above, the General Assembly has approved an additional \$1,438,605 in tuition spending authority for the University of Colorado for the following: at the Colorado Springs campus for the resident graduate, education, engineering, and business programs and all nonresident tuition; at the Denver campus for nonresident undergraduate lower division freshman and sophomore tuition; at the Boulder campus for nonresident graduate business, engineering, journalism/music programs, and other miscellaneous programs where the nonresident graduate tuition rate is currently less than the nonresident undergraduate tuition rate.

FY 1999-00

Governing Board be raised up to 2.4 percent. These rates are used in order to increase spending authority for program enhancements and this is not an attempt by the General Assembly to set tuition policy. Each Governing Board will give consideration to establishing equity of tuition increases among the campuses under the Governing Board's jurisdiction. In addition to the tuition increases outlined above, the General Assembly has approved an additional \$142,034 in tuition spending authority for the following programs at the University of Colorado Health Sciences Center: Masters in Public Health; Masters in Biophysics and Genetics, and the Child Health/Physician Assistant undergraduate and graduate programs. The University of Colorado is allowed to increase the tuition in these programs in amounts not to exceed the additional spending authority specified above. Also, the General Assembly authorizes the Law School at the University of Colorado at Boulder to increase their resident tuition by 7.6 percent and their nonresident tuition by 2.1 percent above the standard increases.

Key Constitutional and Statutory Provisions Related to Tuition

Section 4 of Aricle VIII of the Colorado Constitution: The governing boards of the state institutions of higher education, whether established by this constitution or by law, shall have the general supervision of their respective institutions and the exclusive control and direction of all funds of and appropriations to their respective institutions, unless otherwise provided by law.

Section 23-1-103.5 (2) (a), C.R.S.: For the 1993-94 fiscal year and fiscal years thereafter, the amount of cash funds appropriated in the general appropriation bill by the general assembly for the governing boards and the boards of trustees for all state-supported institutions of higher education shall equal the maximum amount of cash funds that such governing boards and boards of trustees shall raise, spend, or transfer to reserves for that fiscal year.

Section 23-5-129 (10), C.R.S.: While a state institution of higher education is operating pursuant to a performance contract negotiated pursuant to this section, the general assembly retains the authority to approve tuition spending authority for the governing board of the institution.

Section 23-1-104 (1) (a) (I), C.R.S.: The general assembly shall make annual appropriations of general fund moneys, of cash funds received from tuition income, and of cash funds exempt that are estimated to be received by an institution, under the direction and control of the governing board, as stipends, as defined in section 23-18-102, as a single line item to each governing board for the operation of its campuses.

Section 23-18-202 (3) (b), C.R.S.: The tuition increases from which the general assembly derived the total cash spending authority for each governing board shall be noted in a footnote in the annual general appropriations act.

FY 2008-09 Joint Budget Committee Staff Budget Briefing DEPARTMENT OF HIGHER EDUCATION

ISSUE:

The peer comparison funding model under development by the Department

SUMMARY:

- The Department requested \$48.6 million General Fund for stipends and fee-for-service contracts, but is still developing the distribution formula for these funds and hopes to have a recommendation in January.
- Draft distribution formulas shared with staff are based on comparisons between Colorado institutions and similarly situated peer institutions.
 - The justification offered for a peer comparison model is the need for Colorado institutions to have the resources to offer competitive compensation to faculty.
- The Department has identified a goal of achieving the average of peer funding for each institution in 10 years.
- The Department is developing target percentages for the state support versus student tuition and fees for each institution.
- Staff has concerns that the General Fund increases needed to close the peer gap in 10 years with the target percentages of state support under discussion by the Department are unrealistically high.

RECOMMENDATION:

Staff recommends that the JBC require the Department to submit a projection of the annual General Fund and tuition increases necessary to reach its targeted funding level with its distribution formula in December. The projection of tuition increases should be by institution. The Department should discuss how the administration plans to make that level of support available for the higher education institutions.

DISCUSSION:

The Department's decision item #1 includes \$48.6 million General Fund for stipends and for fee-for-service contracts. However, the Department did not include a distribution formula explaining how the funding will be allocated by governing board and between stipends and fee-for-service contracts. The Department indicated to staff that they are still negotiating a formula with the governing boards and that they hope to have a solution in January.

Draft peer comparison model

Draft documents have been provided to the staff and some JBC members illustrating the principals of the distribution formula that is still under development.

- For each Colorado institution identify, with the help of a third-party consultant, peer institutions outside of Colorado that share similar characteristics;
- Calculate the average revenue per student FTE received by the peer group from combined state support, tuition, and fees;
- Close the gap between Colorado institutions and the peer average in 10 years (the Department counts FY 2007-08 as year one, and so the target year for completion is FY 2016-17); and
- Achieve goals for different higher education sectors for the share of costs paid from state support versus tuition by the end of the 10-year period.

The core justification for a peer comparison model is that Colorado institutions need to have the resources to offer competitive compensation to faculty. By far the largest expense for higher education institutions is faculty compensation. Most higher education faculty searches are national. There are certainly some disciplines and some institutions, particularly in the Denver metropolitan area, where wages in the local economy might be a good index of the necessary resources for Colorado institutions, but the institutions report that most often the competition for faculty is with other higher education institutions around the country.

An argument could be made that Colorado doesn't need the peer average resources to be competitive in faculty recruitment. Factors such as administrative efficiencies, mountains, sunshine, and low taxes could allow Colorado institutions to compete effectively at some funding level below the peer average. Assuming those factors apply equally to all Colorado institutions, the Department's draft model would still be a defensible distribution formula if the General Assembly determined that the overall level of funding should be some percentage less than the peer average.

Rather than providing an across the board increase, the draft model reexamines the base for each institution and justifies a disproportionate allocation of General Fund to some governing boards based on the need to treat all governing boards equally relative to the external peers. Through the selection of peers, the model recognizes differences in the types of programs and corresponding costs offered by each institution. The model explicitly identifies targets for the share of costs born by the state versus the student. These are the strengths of a peer comparison model, if the Department can successfully identify the peers and collect the data to implement it.

Shortcomings of a peer comparison model

A higher education funding model that is indexed to peers can be circular. The peer institutions will likely be watching Colorado while Colorado is watching them. This is similar to the problems associated with using a salary survey to determine compensation. The Department indicates that

they intend to update the peer comparison model on an annual basis to account for growth in the resources available to peer institutions. The assumptions used about the future growth rate of peer institutions significantly influence any analysis of whether the state can reasonably expect to meet the Department's goal of peer parity in 10 years.

A peer comparison model is only as accurate and fair as the comparability of the peers and the quality of data from the peers. For some Colorado institutions there are a number of reasonable facsimiles around the country, but for others it is hard to find even one corresponding institution. The process of establishing peers is controversial and arguably better described as an art than a science. Peer comparison models are prone to criticisms of peer creep, where peer groups are perceived to represent aspirations rather than reality. Last year the National Commission on Higher Education Management Systems (NCHEMS) released a report on the gap between Colorado institutions and their peers. That report was not used as the basis for distributing resources. Since the NCHEMS report was released, as the Department has worked on a model that would actually distribute funding based on the peers, data submitted by the Department indicates that there have been 65 changes to the peer institutions for the 4-year institutions, which represents 34.9 percent of the original number of peers. The peer groupings for the community colleges have been completely reworked, although it appears that the universe of institutions being compared with Colorado community colleges is still fairly similar. Not all of the changes increased the average funding per student for the peer group. To change the peers the Department required institutions to go through a process where they provided quantifiable evidence to justify the change. All changes had to be approved by the third-party consultant.

The draft models distributed by CCHE rely heavily on data from the Integrated Postsecondary Education Data System (IPEDS). IPEDS is maintained by the federal government's National Center for Education Statistics. Federal statutes require higher education institutions to submit "timely and accurate" data to IPEDS in order to participate in federal financial aid programs. The federal government trains and assists higher education institutions in how to submit the data. The federal government attempts to verify some of the data by comparing it with other sources, and by analyzing prior submissions and trends. Anomalies are discussed with the submitting institutions. Some of the data submitted to IPEDS is supposed to be transcribed from audited financial statements for the institutions. However, the federal government does not systematically audit the data submitted to IPEDS. Still, IPEDS is among the most rigorous sources of data available for national comparisons.

The primary problem with IPEDS, or any other national data source, is that it limits the peer comparison model by the way that the national data is defined. For example, IPEDS data on SFTE and revenues includes continuing education, a category of expenditures that in Colorado is not eligible for state funding. There is no way to separate out the continuing education expenses, and some feel that this skews the peer comparison for certain institutions. Similarly, there are concerns that the way IPEDS defines SFTE for graduate programs and community colleges may not be compatible with Colorado practices. These types of data quality issues are a significant part of the current negotiations about the funding formula.

The share of costs for the student versus the state

A key component of the draft model is the so-called shares concept that identifies a target percentage of costs to come from the General Fund versus tuition and fees. The Department divided the higher education institutions into sectors and determined different shares to be born by the state for different sectors. The Department believes that different shares are necessary to balance the budget within available resources. Some policy makers argue that prices, or at least the percentage share of state support, should be equalized across institutions to ensure access and prevent discrimination. The Department points out that to attempt to equalize prices or percentage shares across the system would require a significant realignment of current funding. Also, it ignores differences in the ability of the student body to pay, the quality (or perceived quality) of the education provided, and the future earning potential of the students.

While the Department believes that different shares are necessary to balance the budget, in determining the shares it did not attempt to quantify variables such as student ability to pay, quality of the education, or future earning potential. Nor did the Department look to the peer institutions to determine the shares. The Department believes that while the total resources for Colorado institutions need to be competitive with peers, the share of costs born by the General Fund versus the student is an individual state policy decision.

The Department described the method it used to determine the shares in the draft documents provided to staff as gut instinct. The shares were latter revised based on averaging the results of a blind survey of what the chief financial officers for each governing board thought about the appropriate shares. The shares are arguably both the most important policy component of the model that the legislature needs to approve, and the least justified, researched, and analyzed part of the model. Staff does not believe it would be productive for the JBC to argue with the Department about how it defines SFTE, for example, unless there was some reason to believe that the balance of the Department's decisions were capricious or politically motivated. However, it would be appropriate for the JBC to debate the percentage state share versus student share of costs for each institution.

Projecting future resources

Staff attempted to get the Department to provide a projection of the resources necessary in future years to close the gap with the peers within the 10-year time period. The Department indicated that they have done this analysis and that they believe that closing the gap is possible with optimistic assumptions about future appropriations. However, the Department did not provide the analysis to support this position prior to the staff briefing. This may be in part because the distribution model is still in flux. Staff has concerns about the Department's assertion that the peer gap can be closed in 10 years. Staff suspects that the Department considered the total funding shortfall, but not the impact that the shares concept (which was developed at a later point in time) has on the need for General Fund.

The assumptions about future appropriations imbedded in the model are important because they provide insight on whether the higher education institutions are likely to be satisfied that the model treated them fairly. If it takes 30 years to reach peer parity rather than 10, because the model has unrealistic expectations about General Fund increases, will the higher education institutions be content with the approach?

Staff attempted to project the necessary General Fund increases through FY 2016-17 to achieve peer parity and estimated that it would require an annual increase of 12.5 percent. The results are displayed in a table form below and in a graph on page 55. Please note that this analysis is based on a discussion DRAFT of the Department's distribution formula at a point in time and may not resemble the current status of the Department's plan. Please also note that staff had to make a number of assumptions to create this projection that may not be consistent with the Department's intent. All of the calculations and assumptions behind the model are detailed in the table on page 56.

	Increases Required to Close the Peer Gap in 10 Years											
	GF + Net Tuition				Net Tuition and

To create the projection staff took the average peer funding per SFTE that the Department estimated for FY 2007-08 and multiplied it by the Department's projected FY 2007-08 SFTE at each Colorado institution. To the resulting targeted funding level for FY 2007-08, staff applied the percentage state and student shares for each institution. This showed that in aggregate Colorado is \$696.9 million below the targeted level of General Fund support.

Staff then made assumptions about the annual growth rate of the peer average and the Colorado SFTE to calculate the targeted funding in FY 2016-17. The Department indicated it was using optimistic assumptions, and so staff assumed only a 2.0 percent annual inflationary growth rate for the peer institutions and a 1.0 percent annual growth rate for the Colorado SFTE (the later may not be consistent with the Governor's goal of doubling degrees awarded by 2017).

Finally, staff assumed that the General Assembly would provide a constant percentage increase every year to achieve the targeted funding by FY 2016-17. The Department described a methodology that would divide the total estimated funding need in equal parts over the years available until the target year of FY 2016-17. Staff believes that given the six percent limit, the legislature would be better off with an equal percentage increase for higher education every year rather than an equal dollar increase. Staff made an exception to this methodology for FY 2008-09, since the Department has

a General Fund request for that fiscal year. For all years, including FY 2008-09, staff assumed that tuition and fees would fill in the gap between a constant percentage increase in the total resources and the General Fund increase. Therefore, the table reflects a tuition and fee increase for FY 2008-09, even though the Department has not yet submitted a request in that area.

Predictions and questions

Given the six percent limit on General Fund appropriations, staff is concerned that it is unrealistic to expect the General Fund increases for higher education institutions to exceed six percent for 10 years in a row. This concern is heightened by the fact that staff used what is probably an unrealistically low assumption of only 2.0 percent for the annual growth in peer funding. This suggests that the Department may need to:

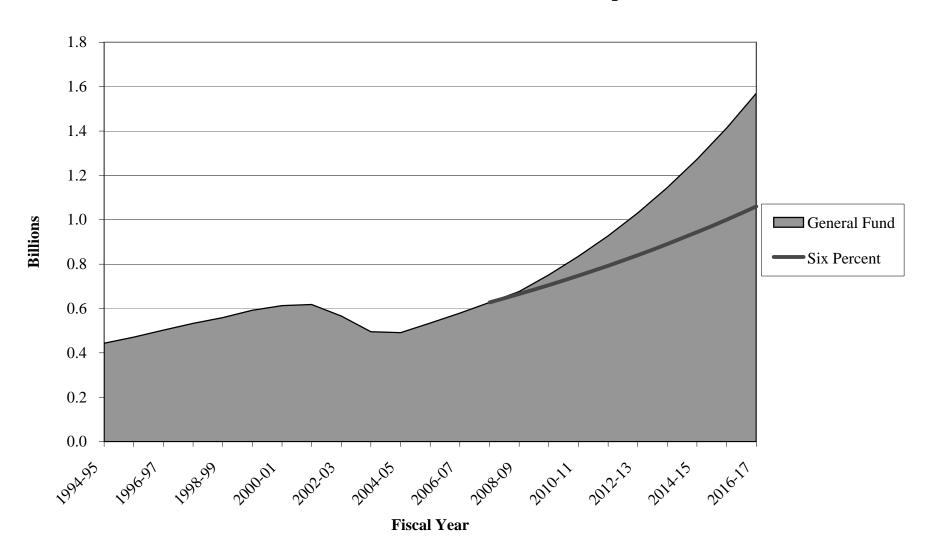

- set a less lofty goal than achieving the average of peer funding;
- decrease the state share and increase the student share;
- extend the time horizon to achieve peer parity; or
- some combination of all of the above.

If the model is not changed, staff predicts that the Department will fail to achieve its goal of peer parity. Impatient institutions that believe they have market capacity to increase tuition will successfully lobby the legislature for additional tuition spending authority. These institutions will then be better funded relative to their peers than other Colorado institutions and any perception within the higher education community that the funding model is fair will erode. The institutions that did not raise their tuition will rebel and force a reconsideration of the distribution formula.

With the risk of this potential scenario looming, why not start with a distribution formula that has a more realistic chance for success? Ten years is a long time to wait to reach an acceptable level of funding. Staff does not believe that extending the time horizon is a good option. Staff believes that the Department should propose a way to make due with less money and/or reduce the state share. If the Department thinks that the historic expenditure patterns under the six percent limit should not constrain projections of future funding for higher education, because of a pending ballot measure or plans for dramatic adjustments in funding for other state agencies, then these changes should be articulated so that the legislature can consider their merits and likelihood of passage when deciding whether to approve the higher education distribution formula.

Staff recommends that the JBC ask the Department to include a projection of General Fund needs over the ten year period when they submit their distribution plan in January. Staff also believes that the Department should project the increases in tuition rates necessary to achieve its targeted funding levels, and do this by institution. It is possible for the aggregate increase in tuition revenue to be acceptable to the legislature while the increases necessary for individual institutions are unacceptable, because of the gap between those institutions and peers and the state versus student shares targeted for those institutions by the Department.

FY 2008-09 Joint Budget Committee Staff Budget Briefing DEPARTMENT OF HIGHER EDUCATION

ISSUE:

Enterprise status of the higher education institutions

SUMMARY:

- All of the higher education institutions qualified for enterprise status under TABOR in FY 2006-07.
- For FY 2007-08, the State Auditor projects that Adams, Mesa, and Western state colleges will not meet the criteria, because they will receive more than 10 percent of their revenue from state and local grants for capital construction.
- The advantage of enterprise status for higher education institutions is that the tuition and other revenues they earn are not counted against the state's TABOR limit.
- The loss of enterprise status due to capital construction appropriations is not necessarily a policy concern.
 - Enterprise status and the corresponding tuition flexibility maters most to a higher education institution during a budget crisis.
 - The first appropriations likely to be reduced in a budget crisis are capital construction appropriations. This would reduce or eliminate the reason the governing boards are projected not to qualify for enterprise status.
- If the institutions lose enterprise status as projected, it will require a supplemental or legislation to address the change in status.

RECOMMENDATION:

Staff recommends that the JBC sponsor legislation to eliminate Section 23-1-103.5, C.R.S., which requires the General Assembly to appropriate spending authority for all revenues earned by a governing board that are subject to TABOR. Eliminating this section would ensure that the funds appropriated and controlled by the General Assembly for each governing board are consistent across all governing boards. It would not reduce the General Assembly's control over tuition.

DISCUSSION:

In October of 2007 the State Auditor issued a report on the enterprise status of higher education institutions. Based on preliminary financial statements, all of the governing boards qualified for enterprise status in FY 2006-07. However, the State Auditor projected that three governing boards -- Adams, Mesa, and Western -- will not qualify in FY 2007-08. The reason they will not qualify is the level of state funding for capital construction.

Senate Bill 04-189 that set up the College Opportunity Fund Program redefined the way the state supports the operating expenses of higher education institutions so that it was no longer considered a state or local grant for purposes of meeting the qualifications in TABOR for enterprise status. An enterprise, among other things, must receive less than 10 percent of its revenues from state and local grants. However, S.B. 04-189 did not redefine the way that the state supports capital construction.

At the time S.B. 04-189 passed, there were discussions about whether setting up a higher education building authority to receive capital appropriations and hold title to the facilities would cause capital appropriations to no longer be considered state grants. There were also discussions about setting up building funds for each campus to receive steady annual appropriations for capital construction, or financing construction through certificates of participation to amortize construction appropriations over the life of the facility. Both of these strategies were intended to dilute the impact of capital construction appropriations on the enterprise calculation by spreading capital grants over a period of time. None of these discussions resulted in a change to the final bill and capital appropriations are still considered by the State Auditor to be a state grant.

The advantage of enterprise status for higher education institutions is that enterprise revenues are excluded from the TABOR calculation of whether a refund is due. Prior to the higher education institutions gaining enterprise status, and prior to Referendum C, increases in higher education revenues, particularly tuition, could cause the state to be required to refund more General Fund. This reduced the General Fund available for capital construction, roads, and potentially operating expenses. In the early 2000's, when the state was reducing General Fund appropriations for higher education institutions to balance the budget within available revenues, it also limited the capacity of higher education institutions to increase tuition to compensate for the loss in General Fund. This was because any increase in tuition would have reduced the available General Fund by increasing the refund due to taxpayers.

Referendum C established a five-year timeout period during which no refunds are due to taxpayers. A higher education institution losing enterprise status during the time-out period has no bearing on the TABOR refund amount, because there is no TABOR refund due. After the five-year time-out, Referendum C allows the state to retain an amount more than the original TABOR limit, but refunds are once again possible.

TABOR specifically addresses when an entity gains or losses enterprise status and instructs that the TABOR base must be adjusted. Thus, including or excluding the base revenues for a higher education institution from the TABOR calculation according to the enterprise status of the institution has little bearing on the TABOR refund. However, the rate of growth of those base revenues could impact the TABOR refund. Including in the TABOR calculation a higher education institution that is growing slower than the TABOR limit actually increases the General Fund that the state can retain when a refund is due. If the higher education institution is growing faster than the TABOR limit it would reduce the General Fund that the state can retain.

The fact that three governing boards are projected to lose enterprise status in FY 2007-08 is not a major policy concern to staff for several reasons:

- The loss of enterprise status is occurring during the five-year Referendum C timeout and has no bearing on a TABOR refund amount, and even if it were after the five-year timeout the other bullets apply;
- The institutions at most risk of losing enterprise status due to a capital appropriation are the smaller governing boards, and so the magnitude of the impact of their revenues on the TABOR calculation is relatively minor;
- The institutions at most risk of losing enterprise status are institutions that are not likely to have aggressive tuition growth strategies based on the demographics of the populations they serve:
- The enterprise status of higher education institutions matters the most during a budget crisis when there are insufficient revenues to meet all the needs and wants of the state. In this environment, one of the first expenditures to be reduced is typically capital construction. There might be a lag as institutions continue spending capital appropriations from prior years, but reducing new capital appropriations would quickly bring the higher education institutions back to enterprise status and eliminate concerns that tuition increases will reduce the available General Fund.

While the projected loss of enterprise status for three higher education institutions is not a major policy concern, it will necessitate a complicated supplemental, or a change in statute. Section 23-1-103.5, C.R.S. was enacted prior to the College Opportunity Fund Program and indicates that the cash funds appropriations in the Long Bill constitute a limit on the TABOR revenues that a higher education institution may earn. Prior to the adoption of the College Opportunity Fund Program, the decision about what higher education activities should be appropriated in the Long Bill was based on the TABOR status of the revenues. After the adoption of the College Opportunity Fund, the General Assembly decided to limit the cash funds that are controlled through the Long Bill to tuition and academic fees.

If the three higher education institutions lose enterprise status they will need to comply with Section 23-1-103.5, C.R.S. New appropriations will need to be made in the Long Bill to provide cash funds authority to raise revenues from non-academic fees and charges for activities that are not associated with auxiliary enterprises, such as library fines and renting out meeting space for conferences. This would make the appropriations for the three governing boards inconsistent with the appropriations for other institutions. Also, it would require the General Assembly to make decisions about the level of revenues to authorize in areas of the higher education budget where the General Assembly has historically expressed little interest in controlling decisions, other than to limit the impact of those decisions on the TABOR calculation.

A better solution might be to sponsor legislation to eliminate Section 23-1-103.5, C.R.S. In 1993 when Section 23-1-103.5, C.R.S. was created it served as justification for the General Assembly to reassert a stricter level of control over tuition after a brief period of time when the General Assembly

was relatively laissez-faire about limiting tuition increases. The statute also reinforced a concept that had been used in some prior years that the legislature should express its intent with regard to tuition by restricting overall revenues rather than tuition rates.

If Section 23-1-103.5, C.R.S. were eliminated, the General Assembly would still have authority to control tuition based on its plenary power of appropriation. Also, Section 23-5-129, C.R.S. expressly states that the General Assembly retains the authority to approve tuition spending authority for the governing boards. Section 23-1-104 (1) (a) (I), C.R.S. requires the General Assembly to appropriate tuition spending authority in the Long Bill and Section 23-18-202 (3) (b), C.R.S. requires the General Assembly to describe its tuition assumptions in an annual footnote. The "exclusive control and direction of all funds" that is granted to governing boards in Section 4 of Aricle VIII of the Colorado Constitution specifically says, "except as otherwise provided by law."

It's possible that a governing board could interpret that a limit on tuition spending authority controls expenditures only and has no bearing on revenues. Since moneys are fungible and higher education institutions have authority to roll-forward revenues and then spend from reserves without specific appropriation, this would make a limit by the legislature on tuition spending authority meaningless and unenforceable. If a higher education institution was bold enough to adopt this interpretation, the General Assembly could take corrective action by reducing General Fund appropriations or passing a clarifying statute. The possibility that a higher education institution could adopt this interpretation exists in the current statutory environment with or without Section 23-1-103.5, C.R.S. for the institutions that are not subject to Section 23-1-103.5, C.R.S. because they qualify for enterprise status.

Staff recommends that the JBC sponsor legislation to eliminate Section 23-1-103.5, C.R.S.

FY 2008-09 Joint Budget Committee Staff Budget Briefing DEPARTMENT OF HIGHER EDUCATION

ISSUE:

Support for the academic mission of higher education institutions from non-appropriated auxiliary programs

SUMMARY:

- The degree of support from non-appropriated programs for the higher education institutions is a frequent question from legislators.
- There is no good measure currently available to examine that level of support in a consistent way across all higher education institutions.
- Non-appropriated auxiliary programs frequently do provide support to the academic mission of the institution in direct and indirect ways.

RECOMMENDATION:

Although there are many ways in which non-appropriated auxiliary programs can help subsidize the academic activities of the higher education institutions, in most cases it would discourage entrepreneurship to take these into consideration in a funding formula, and therefore staff recommends that the General Assembly focus its attention on the level of General Fund and tuition for the institutions.

DISCUSSION:

Nearly every year the JBC staff fields questions about the total level of resources available to the higher education institutions in excess of those moneys that are appropriated in the Long Bill. The issue seems to be that even during the economic downturn of the early 2000s the net assets of several higher education institutions increased, and sometimes at double-digit percentage rates, as illustrated in the table below. The conclusion by some policy makers is that the higher education institutions are healthy and concerns about the adequacy of the state support are exaggerated. Within the higher education community, some people use the financial statements and the level of non-appropriated activity to argue that certain institutions are at a competitive advantage to other institutions.

It's important to understand that the statement of net assets is not an analysis of the ability of the higher education institutions to pay the salaries of professors. For one thing, it is skewed by factors such as the valuation and depreciation of physical plant, and by when an institution recognizes gains and losses from investments. Another consideration is that the statement of net assets does not distinguish between the different categories of revenues and expenditures, and restrictions on the transferability of resources from one category to another. For example, on the statement of net assets a higher education institution may appear to make money from room charges, but it may be that the "profit" is being set aside in a fund to address projected maintenance and it would be irresponsible to transfer the money to pay professor salaries.

What would be more useful than the financial statements is a tool to measure the degree to which auxiliary activities supplement General Fund and tuition to support the academic mission of the institution. Unfortunately, such a tool does not currently exist and staff is unsure how one could be developed that would apply consist standards to all higher education institutions. Instead, this issue brief settles for an anecdotal discussion of the ways in which auxiliary activities can subsidize the academic mission of an institution, and a philosophical discussion of whether the General Assembly should take this into consideration in designing distribution formulas for General Fund and tuition.

Indirect cost recoveries for auxiliaries

Generally auxiliary programs are designed to operate at cost. It would be unusual for a higher education institution to consciously overcharge students for books at the bookstore in order to pay professor salaries. However, auxiliary programs do support the academic mission through indirect cost recoveries. If an institution has a human resources division and allocates 20 percent of the costs to the housing auxiliary based on FTE, that doesn't mean that if the housing program went away the human resources division would be 20 percent smaller. In fact, the institution might not be able to reduce the human resources division at all, but the share of costs born by the General Fund and tuition would increase because of the absence of the auxiliary program, and consequently the amount of resources available to pay the salaries of professors would decrease. A similar thing occurs when an institution allocates the costs for other centralized services and expenditures such as accounting, physical plant, utilities, management, roads, landscaping, and information technology systems. Determining the degree to which indirect cost recoveries from auxiliaries subsidize the academic activities of an institution would require a subjective analysis on a case-by-case basis. Auxiliaries often incrementally increase the administrative costs of an institution, but not always in proportion to the indirect costs collected from the auxiliary.

Financial aid

A frequent significant subsidy from auxiliary programs occurs in the area of financial aid. Financial aid packages typically address living expenses as well as tuition, regardless of whether those living expenses occur on-campus or off. If a higher education institution has a housing, food, or parking program, a portion of the financial aid expenses may be assessed against those revenues with the result of a more robust institutional financial aid program than would otherwise be offered.

Some institutions offer significant continuing education programs that are classified as auxiliaries, but blur the line between an auxiliary and the core academic functions of the institution. Continuing education classes are offered on a cash basis, unless CCHE specifically allows state funding. Often the program is offered off-campus and a General Fund subsidy is prohibited by CCHE because it would allow an institution to provide courses at a price that would poach students from another school in the region, or create under-enrollment in duplicate degree programs that are authorized to receive General Fund. Another reason a continuing education program might be prevented from receiving General Fund is because it does not award credit toward a degree.

Continuing education

Adams has successfully marketed on-line and satellite courses that help teachers meet on-going education requirements for licensure, or obtain a masters degree. Because teachers have to take the continuing education classes, and want to take the masters degree courses to improve their compensation, and because Adams has made the classes so convenient for working students, the courses are very popular, even at the unsubsidized tuition rate. Adams' continuing education program generates approximately \$750,000 in indirect cost recoveries each year. At the CU-Boulder campus, part of the recruiting pitch to faculty is an agreement by the administration that regular courses will not be scheduled in the evenings. However, there is still demand from students for evening classes, and unsubsidized courses are offered at night through the continuing education program. Professors that agree to teach classes at night, in addition to their normal workload during the day, are compensated at a higher level than for classes taught during the day. This is similar to an over-time payment. In both the CU and Adams examples professors are getting paid through an auxiliary, but the payment relates to the time they spend working for that auxiliary. It would be hard to argue that continuing education provides a subsidy for the regular education program that is direct rather than the typical indirect cost benefit common to all types of auxiliary programs. On the other hand, the auxiliary teaching in these examples is largely indistinguishable from the regular academic courses taught by the institution.

An argument could be made that Adams and CU-Boulder shouldn't be offering these programs on a cash basis, but rather on a subsidized basis. The student is getting charged an unsubsidized tuition rate for an education course that is indistinguishable from a non-continuing education course. It's unknown whether CCHE would authorize state support for these programs if requested. Staff for both institutions indicated that the schools might choose to offer these programs as auxiliaries rather than subsidized programs even if offered state funding. This is because tuition for continuing education programs is not regulated, the institution doesn't have to go through a beauracratic process with CCHE for program approval, and there is a lack of confidence that General Fund and tuition increases authorized by the legislature will keep pace with program costs.

Research

Another auxiliary that generates significant indirect cost recoveries for institutions is research. The University of Colorado, Colorado State University, and the Colorado School of Mines are all among

the top institutions in the country in terms of research dollars earned. The research dollars earned generally relate to the amount of time that faculty spend doing research. However, there are sometimes disparities in the rate of compensation for time spent doing research versus time spent teaching so that a professor that spends 40 percent of his time conducting research may earn 55 percent of his salary from that research. Unfortunately, it can also go the other way. In recent years the federal government has been cutting back on allowable indirect cost charges for research grants. The University of Colorado Health Sciences Center recently concluded that the effort required to justify a higher indirect cost recovery under new federal rules exceeded the value of the additional indirect costs and voluntarily accepted a lower rate in exchange for less reporting.

In addition to indirect cost recoveries, research activities can have a significant impact on the physical plant and scientific equipment available to an institution. Research funds have paid for buildings at CU and CSU that were later used to provide faculty or administrative office space and even classrooms, in addition to providing space for research activities. A grant for a new research building might also pay for needed road and utility improvements and landscaping that benefit non-research programs. As for scientific equipment, if a researcher can purchase the latest dissociation-enhanced lanthanide fluorescent immunoassay fluorometer (actually exists) technology through a grant, the equipment then becomes available to the institution and can be used in classes or by graduate students.

Then there are the benefits to the institution's reputation and to faculty and student recruitment that a robust research program can offer. An institution with a strong research program would appear to have some competitive advantages over institutions without such a research program. Should the General Assembly take this into account in developing a funding distribution formula? If the General Fund for research institutions was reduced to account for the benefits to that institution of research funds, it might have a chilling effect on the amount of research conducted.

Clinical practice

There are a few auxiliary programs that provide direct and obvious subsidies to the academic program. One example is the clinical practice of faculty at the University of Colorado Health Sciences Center and the Colorado State University Veterinary Medicine Program. At UCHSC it is commonplace for the state contribution to cover only a small fraction of the time that professors spend teaching, and for clinical revenues to make up the difference. Some programs allow professors to keep a large portion of their clinical earnings while other programs are more socialistic in the way that they allocate the clinical revenues among the faculty. The institution routinely grapples with situations where a professor wants to be compensated more based on clinical revenues, or be allowed to work a few more hours in clinic so that the department can buy some new piece of medical equipment. Should the state's distribution formula say that if professors earn more clinical revenues the General Fund will be reduced? The institution is concerned that it is already too dependent on clinical revenues. One professor at UCHSC recently quit so that he could retain a larger portion of his clinical earnings. After giving up his academic pay he makes more money from less hours of clinical work and volunteers his time to teach.

Foundations

The foundations operated by institutions provide another form of direct auxiliary support. The largest foundation relative to the size of the institution is at the Colorado School of Mines. Staff can imagine the legislature asking institutions to be more aggressive in seeking private donations because General Fund is tight, but staff can't imagine a funding formula that would reduce General Fund based on the level of foundation support. Some states have experimented with matches to private giving.

Housing

Housing can be an auxiliary program that governing boards use to subsidize academic programs. The institutions can frequently finance housing projects at lower rates than the private sector and they are exempt from property taxes on the facility. However, a portion of the value of rental properties is in the appreciation, and higher education institutions rarely sell the property to realize the appreciation. Also, higher education institutions face greater challenges than the private sector in maintaining occupancy levels, because they restrict access to students. Occupancy levels may be a particular problem if the institution is saddled with an old-fashioned dormitory-style facility with shared rooms and toilets. These facilities are often less desirable to students than off-campus housing. As a result, higher education institutions are not necessarily making a profit from housing, but it may occur, particularly in areas where rental rates are inflated. A recent capital construction request from Mesa State College (where rental rates are high due to energy development) proposed using housing and other auxiliary revenues to construct a building that would be used by the admissions department.

Many schools, particularly private institutions, have created so-called living-learning communities that co-locate academics and housing. The motivation for living-learning communities is often to improve retention and achievement rather than economics, but in some cases housing funds may be used to help pay for things like professors teaching seminars in campus housing, the construction of classrooms or academic office space in the dormitories, or lodging provided to professors as part of the compensation package. Staff is aware of at least two living-learning programs at Colorado institutions. Colorado State University has some living-learning communities on its Fort Collins campus where the housing program pays for the space but General Fund and tuition pay for the credit courses offered. At the University of Colorado there are some living learning communities where students pay a higher housing rate for an enhanced residential life experience.

Staff has concerns about higher education institutions using housing funds to support academic activities. An institution that uses housing funds to support academics may not be setting aside enough for controlled maintenance and a future president may wish that the housing funds were still there to replace the furnace or carpet when these items wear out. If an institution is setting aside enough for maintenance and still making a profit, why wouldn't it just reduce the rental rates for students? Housing is one of the largest costs of attendance and an economic barrier for many students.

Athletics

Similar to the way housing supports academics, athletics can subsidize academics by paying for study halls and for facilities that end up being used by for-credit physical education and health science courses. Unlike housing programs, the amounts students and the community pay to participate in athletics are not a necessary expenditure, but rather a recreational expenditure. Much of the revenue earned by the big athletic programs comes from the community and media rather than the students. Like research programs, athletics may help with student and faculty recruitment. There is a large gap between the revenues earned by athletic programs at CU-Boulder and CSU versus all other institutions in the state.
