

“Loveland Pass in the winter can be downright terrifying at times”

The pass is well known for its treacherous winter conditions, and the weather only gets worse as you climb higher in elevation. This road has humbled many egos. It's not for the sissies.

There's a high risk of avalanches near the summit. Drive with care as this is a mountain road with hairpin curves and dangerous dropoffs. - Dangerous Roads – Website - www.dangerousroads.org

Media Recognizes Safety Issue on the Pass

- *“You are one of several hundred truckers hauling hazardous materials each day who are forced to divert away from the easier and quicker and less windy I-70 route through the Eisenhower/Johnson tunnels and use the steep and very curvy two lane highway US 6, Loveland Pass. There are a few crashes of hazardous materials trucks every year on either side of Loveland Pass, sometimes with results that are awful for the driver and terrible for the environment.”*

– Jason Luber, Channel 7 Denver’s Traffic Anchor
