state on or after January 1, 2028, as long as the state is not required to defray the cost of the coverage of the kidney function screening services.

1 *Be it enacted by the General Assembly of the State of Colorado:*

2 **SECTION 1. Legislative declaration.** (1) The general assembly
3 finds and declares that:

4 (a) Chronic kidney disease and end-stage renal disease impose a
5 severe health and financial burden on Colorado residents. In 2021, over
6 8,000 Colorado residents were being treated for end-stage renal disease,
7 with 4,994 of those residents depending on dialysis to stay alive. The
8 annual insurance costs for chronic kidney disease in Colorado have
9 reached \$457 million with patients paying nearly \$58 million
10 out-of-pocket. According to the centers for disease control and prevention
11 in the federal department of health and human services, one out of every
12 7 adult Americans has chronic kidney disease, and up to 90% of those
13 individuals do not know that they have it. The number of individuals who
14 have chronic kidney disease is disproportionately higher in minority
15 communities.

16 (b) Early screening for chronic kidney disease is essential but
17 currently underutilized in Colorado. Among the 800,206 Coloradans who
18 have hypertension, diabetes, or both hypertension and diabetes, an
19 estimated 144,217 individuals likely have advanced, stages four or five,
20 chronic kidney disease but many remain undiagnosed due to inadequate
21 screening. Screening is critical because it allows for earlier diagnosis and
22 cheaper interventions, which prevent the significant rise in cost and strain
23 on the health-care system that occurs when chronic kidney disease is
24 diagnosed late and, as a result, is often more advanced.

25 (c) Early detection through screening is cost-effective and

1 prevents disease progression. Each comprehensive kidney function
2 screening test includes serum creatinine, estimated glomerular filtration
3 rate, and urine albumin-creatinine testing. This modest investment in
4 preventive care can identify kidney disease at earlier and more treatable
5 stages.

6 (d) Without early detection, the financial burden of chronic kidney
7 disease escalates dramatically as the condition progresses. Patient
8 out-of-pocket expenses rise from an average of \$280 annually for stage
9 one chronic kidney disease to \$10,183 for end-stage renal disease.

10 (e) The kidney disease prevention and education task force,
11 established pursuant to House Bill 21-1171, enacted in 2021, conducted
12 a comprehensive study and identified early detection through accessible
13 screening as critical to reducing both health complications and the
14 financial strain of kidney disease on Colorado residents and the Colorado
15 health-care system.

16 (2) The general assembly further declares that the purpose of this
17 act is to:

18 (a) Implement the recommendations of the kidney disease
19 prevention and education task force by requiring health insurance
20 coverage for annual preventive kidney function screening services
21 without cost-sharing requirements;

22 (b) Remove financial barriers that currently prevent early
23 diagnosis of chronic kidney disease, particularly among high-risk
24 populations with hypertension or diabetes;

25 (c) Enable timely medical intervention before kidney disease
26 progresses to costly advanced stages that require dialysis or kidney
27 transplantation;

1 (d) Reduce the overall financial burden of kidney disease on
2 Colorado patients, insurance plans, and state health-care programs
3 through cost-effective preventive care; and

4 (e) Improve health outcomes for Colorado residents by facilitating
5 earlier detection and treatment of chronic kidney disease.

6 **SECTION 2.** In Colorado Revised Statutes, 10-16-104, **amend**
