Bill Summary

(Note: This summary applies to this bill as introduced and does not reflect any amendments that may be subsequently adopted. If this bill passes third reading in the house of introduction, a bill summary that applies to the reengrossed version of this bill will be available at http://leg.colorado.gov.)

Shading denotes HOUSE amendment. Double underlining denotes SENATE amendment.
Capital letters or bold & italic numbers indicate new material to be added to existing statute.
Dashes through the words indicate deletions from existing statute.
Section 1 of the bill requires owners of certain large buildings (covered buildings), on an annual basis, to collect and report to the Colorado energy office (office) the covered building's energy use. The bill establishes a process requiring certain electric and gas utilities to provide energy-use data to a covered building owner when requested by the covered building owner.

Section 1 also requires that, on or before June 1, 2027, a covered building owner demonstrate that, in 2026, the covered building met performance standards set forth in the bill. A covered building owner must demonstrate compliance with the performance standards every 5 years after June 1, 2027. The air quality control commission (commission) is required to adopt rules in 2026 or 2027 that extend or modify the performance standards. Thereafter, the commission may, as the commission deems necessary, modify the performance standards by rule.

Section 2 requires the office to assist covered building owners with the reporting requirements set forth in section 1 by:

- Creating a database of covered buildings and owners required to comply with section 1;
- Developing publicly available, digitally interactive maps and lists showing the energy-use and performance-standard data reported;
- Coordinating with any local government that implements its own energy benchmarking requirements or energy performance program, including coordination of reporting requirements; and
- Collecting an annual fee from owners of covered buildings of $100 per covered building. The office is required to transfer the fees collected to the state treasurer, who will credit the fees to the climate change mitigation and adaptation fund (fund) created in section 2.

Section 3 imposes penalties for violations of section 1, ranging from $500 to $5,000, depending on whether the violations are first violations or subsequent violations, and requires that the civil penalty payments be credited to the fund. Certain subsequent violations are also subject to a penalty of 2 cents per square foot of gross floor area of the covered building for each day that the violations continue.

Section 4 modifies the definition of an "energy performance contract" that a governing body of a municipality, county, special district, or school district (board) enters into for evaluation, recommendations, or implementation of energy-saving measures to remove requirements that a board's payment for goods and services pursuant to the contract be made within a certain number of years of the contract's execution.
Be it enacted by the General Assembly of the State of Colorado:

SECTION 1. In Colorado Revised Statutes, add 25-7-142 as follows:

25-7-142. Energy benchmarking - data collection and access - utility requirements - performance standards - rules - reports - definitions - legislative declaration - repeal. (1) Legislative declaration. The General Assembly finds, determines, and declares that the regulation of building performance is a matter of statewide concern because:

(a) As of 2020, buildings represented a significant source of greenhouse gas pollution in the state of Colorado;

(b) Energy consumption and greenhouse gas emissions associated with a building produce impacts far beyond its walls and the boundaries of the local government within which the building is located, including costs to utility ratepayers for increased energy production, community health costs associated with air pollution, and broader societal costs of anthropogenic climate change;

(c) Large buildings represent a disproportionate amount of the energy use and greenhouse gas emissions in the state, yet building tenants that pay those energy costs often lack the ability to implement building upgrades that could improve performance, reduce emissions, and reduce those costs;

(d) The commission has both the statutory authority and obligation to require a reduction of greenhouse gas emissions in the state in every sector including buildings;

(e)(I) Benchmarking and building performance standards
