floor space in more than one building, with a total of 25 or more sets of living quarters or commercial units among all the buildings. These buildings must also have:

- The space in the electrical facilities to increase electric vehicle charging to 50% of the parking spaces; and
- Conduit run to increase electric vehicle charging to 50% of the parking spaces.

Section 3 requires a master electrician to follow these requirements when planning, laying out, and supervising the installation of wiring in a building. **Section 4** requires an architect to follow these requirements when planning, drafting plans for, and supervising the construction of a building. Continuing education requirements are put in place to educate master electricians and architects about these requirements.
