Summary of Legislation

The bill specifies that inspection, testing, or repair of backflow prevention devices does not require plumbing occupational licensure from the Department of Regulatory Agencies (DORA).

Background

Backflow prevention devices are designed to protect clean water lines from wastewater contamination. [House Bill 24-1344](#) continued plumbing industry regulation and made several changes to plumbing occupational licensure. One change was to require plumbing licensure for all work on backflow prevention devices, including inspection, testing and repair. Prior to this change, licensure was only required for the installation or removal of backflow prevention devices.

Assessment of No Fiscal Impact

The changes made by this bill regarding occupational licensure and scope of practice do not change state or local government revenue and expenditures, as the updated licensing requirements in HB 24-1344 have not yet been fully implemented. This bill returns licensing requirements for work involving backflow prevention devices to those in effect prior to HB 24-1344. Thus, this bill is assessed as having no fiscal impact.

Effective Date

The bill takes effect upon signature of the Governor, or upon becoming law without his signature.
