MEMORANDUM (2)(J)¹

TO: Statutory Revision Committee

FROM: Kate Meyer, Office of Legislative Legal Services

DATE: August 11, 2017

SUBJECT: Permanently enjoined laws regulating ballot issue petition circulators

Summary

In 2013, the United States District Court for the District of Colorado issued a permanent injunction² against enforcement of several unconstitutional laws regarding petition circulators. Staff of the Office of Legislative Legal Services (OLLS) has been aware of this decision and appends to statutes implicated in that holding an “editor’s note” advising readers of the C.R.S. of that injunction.

Because the laws are legally unenforceable, OLLS staff is advising that they be repealed. However, staff recommends that the Statutory Revision Committee allow staff to solicit feedback on the scope of the draft legislation prior to taking action to recommend any draft bill.

¹ This legal memorandum was prepared by the Office of Legislative Legal Services (OLLS) in the course of its statutory duty to provide staff assistance to the Statutory Revision Committee (SRC). It does not represent an official legal position of the OLLS, SRC, General Assembly, or the state of Colorado, and is not binding on the members of the SRC. This memorandum is intended for use in the legislative process and as information to assist the SRC in the performance of its legislative duties.

² *Independence Inst. v. Gessler*, 936 F. Supp. 2d 1256 (D. Colo. 2013) (Attached to this memorandum as **Addendum A**).

Analysis

Section 1-40-112, C.R.S.,³ regulates circulators of initiative and referendum petitions. Relevant to this memorandum, subsection (1) of that law requires that circulators possess certain attributes in order to circulate petitions, while subsection (4) of that section restricts the manner in which paid circulators are compensated:

1-40-112. Circulators - requirements - training. (1) No person shall circulate a petition for an initiative or referendum measure unless the person is a resident of the state, a citizen of the United States, and at least eighteen years of age at the time the petition is circulated.

(4) It shall be unlawful for any person to pay a circulator more than twenty percent of his or her compensation for circulating petitions on a per signature or petition section basis.

Subsection (1) was most recently amended in 2007.⁴ Subsection (4) was enacted in 2009⁵ and has not been modified since that time.

In 2010, various plaintiffs⁶ filed suit in federal district court challenging several statutory aspects of the ballot initiative process, including a challenge to the constitutionality of the circulator state residency criterion on subsection (1) and the “hybrid compensation scheme”⁷ of subsection (4).

³ § 1-40-112, in its entirety, is attached as **Addendum B**.

⁴ See Senate Bill 07-083 (“Concerning technical changes to statutory provisions under the “Uniform Election Code of 1992” governing the manner in which elections are conducted, and making an appropriation in connection therewith”).

⁵ See House Bill 09-1326 (“Concerning the integrity of the statewide citizen-initiated petition process, and making an appropriation therefor”).

⁶ Plaintiffs to the action included “petition circulators, non-profit organizations, and petition entities involved in the initiative and referendum process in the State of Colorado.”

⁷ The District Court described the hybrid compensation scheme, also known as a “partial pay ban”, as follows: “The statute does not restrict all compensation to circulators on a per-signature basis; however, as a practical matter, the twenty percent restriction limits per-signature compensation to bonuses or incentive payments. As a result, the statute requires that circulators receive the majority of their compensation in the form of hourly payments.” *Independence Inst. v. Gessler*, supra note 1 at 1258. So, the statute does not categorically prohibit, but does limit, per-signature bases on which to calculate circulator pay.

As to the state residency requirement of section 1-40-112 (1), C.R.S., the United States District Court found the decision in *Yes on Term Limits, Inc. v. Savage*,⁸ which held that a blanket ban on non-resident circulators violated the First and Fourteenth Amendments to the United States Constitution, dispositive. The defendant Secretary of State did not dispute the applicability of that case and stipulated to the entry of final judgment on this claim for relief.

With regard to section 1-40-112 (4), C.R.S., the Court stated that petition circulation is “core political speech” and that, by raising the cost of signature-gathering activities, the law would have the “inevitable effect of reducing the total quantum of speech on a public issue”. Therefore, the Court applied strict scrutiny analysis. While the Court found that Colorado has a compelling interest in ensuring the reliability and honesty of the referendum and initiative process, the statute (in light of both the lack of evidence that the hybrid compensation scheme would actually redress petition fraud and the existence of less burdensome tools at the legislature’s disposal) was deemed not to be narrowly (or even reasonably) tailored.

The Court thus permanently enjoined the enforcement of subsections (1) and (4) of section 1-40-112, C.R.S., and any ancillary statutes that enforced the latter [namely, sections 1-40-135 and 1-40-121, C.R.S., to the extent that those sections apply to the restriction on per-signature compensation found in section 1-40-112 (4), C.R.S.]. The Secretary of State did not appeal this ruling.

Statutory Charge⁹

The Statutory Revision Committee is tasked with examining judicial decisions to discover defects in the law. Because the laws at issue in this memorandum have been declared by a court to be unconstitutional and are permanently enjoined from being enforced (and any appeal of that ruling is now time-barred), they may, in staff’s opinion, be properly deemed defective.

⁸ 550 F.3d 1023 (10th Cir. 2008).

⁹ The Statutory Revision Committee is charged with “[making] an ongoing examination of the statutes of the state and current judicial decisions for the purpose of discovering defects and anachronisms in the law and recommending needed reforms” and recommending “legislation annually to effect such changes in the law as it deems necessary in order to modify or eliminate antiquated, redundant, or contradictory rules of law and to bring the law of this state into harmony with modern conditions”. § 2-3-902 (1), C.R.S. In addition, the Committee “shall propose legislation only to streamline, reduce, or repeal provisions of the Colorado Revised Statutes.” § 2-3-902 (3), C.R.S.

Recommendation/Proposed Bill

If the Statutory Revision Committee accepts staff recommendation to align the C.R.S. with the *Independence Institute* holding, the legislation would repeal section 1-40-112 (4), C.R.S., and section 1-40-135 (2)(b) and (2)(c)(V), C.R.S.¹⁰ Additionally, staff would like to consult with the Secretary of State's office and other elections law experts regarding any ancillary laws that are also permanently enjoined from enforcement pursuant to *Independence Institute*.

¹⁰ § 1-40-135, C.R.S., is attached in its entirety as **Addendum C**.

Addendum A

Case Summary

Overview

HOLDINGS: [1]-[Colo. Rev. Stat. § 1-40-112\(4\)](#) imposed a severe burden on the petition proponents and strict scrutiny applied because [§ 1-40-112\(4\)](#) would have had the inevitable effect of reducing the total quantum of speech on a public issue; [2]-[Section 1-40-112\(4\)](#) was an unconstitutional infringement of the proponents' *First Amendment* rights because, while the State had a compelling interest in ensuring the reliability and honesty of the referendum and initiative process, [§ 1-40-112\(4\)](#) was not narrowly tailored to meet this compelling interest because none of the evidence established a connection between the type of compensation and the validity rates of petition sections, and there were less restrictive means to accomplish the State's goal; [3]-The proponents met their burden of showing that they were entitled to a permanent injunction of the enforcement of [§ 1-40-112\(4\)](#).

Outcome

Judgment entered in favor of petition proponents.

Counsel: **[**1]** For The Independence Institute, Jon Caldara, Dennis Polhill, Mason Tvert, Russell Haas, Douglas Campbell, Louis Schroeder, Plaintiffs: David

Judges: PHILIP A. BRIMMER, United States District Judge.

Opinion by: PHILIP A. BRIMMER

Opinion

[*1258] ORDER

The Court presided over a trial to the court from May 14 to May 24, 2012. The trial addressed one principal issue — whether the State of Colorado's limitation on per-signature compensation for petition circulators violates the *First Amendment to the United States Constitution*. The following constitute the Court's findings of fact and conclusions of law pursuant to [Rule 52\(a\)\(1\) of the Federal Rules of Civil Procedure](#).

[**2] I. FINDINGS OF FACT

Plaintiffs are petition circulators, non-profit organizations, and petition entities involved in the initiative and referendum process in the State of Colorado. They filed this 42 U.S.C. § 1983 action challenging the constitutionality of House Bill 09-1326

("H.B. 1326"), which amends the rules and procedures pertaining to the initiative and referendum processes. On April 26, 2012, the Court granted defendant [*1259] Scott Gessler's motion for summary judgment [Docket No. 327] on plaintiffs' second, third, fourth, eighth, ninth, and tenth claims for relief. Plaintiffs' sixth and seventh claims for relief were dismissed as moot and the Secretary stipulated to the entry of final judgment on plaintiffs' first claim for relief [Docket No. 339]. The trial to court addressed plaintiffs' only remaining claim — the fifth claim for relief, which challenges the constitutionality of Colorado's hybrid compensation scheme.

The hybrid compensation scheme is codified at [Colo. Rev. Stat. § 1-40-112\(4\)](#) and states as follows: "It shall be unlawful for any person to pay a circulator more than twenty percent of his or her compensation for circulating petitions on a per signature or petition section basis." [**3] The statute does not restrict all compensation to circulators on a per-signature basis; however, as a practical matter, the twenty percent restriction limits per-signature compensation to bonuses or incentive payments. As a result, the statute requires that circulators receive the majority of their compensation in the form of hourly payments.

Plaintiffs claim that the hybrid scheme severely infringes their *First Amendment* rights to free speech because it decreases the pool of professional circulators who are necessary for any successful signature-gathering campaign. Plaintiffs also argue that the hybrid scheme increases the cost of signature-gathering efforts, making it more difficult to qualify measures for the statewide ballot. Finally, plaintiffs assert that there is no evidence that the hybrid scheme will reduce the rate or incidence of fraud in the initiative and referendum process. The Secretary responds that plaintiffs offer no proof that [§ 1-40-112\(4\)](#) will actually reduce the number of available professional circulators or that the statute will increase the cost of signature-gathering efforts in Colorado.

The Court previously enjoined the Secretary from enforcing [Colo. Rev. Stat. § 1-40-112\(4\)](#), [**4] [§ 1-40-135](#), and [§ 1-40-121](#) to the extent that those sections applied to the hybrid scheme. See Docket No. 60 at 37. Evidence at the preliminary injunction hearing established that the statute would deter most professional circulators from working in Colorado and would raise the cost of qualifying a measure for statewide vote. The Court also found that the Secretary failed to establish that pay-per-signature compensation was connected to the likelihood of circulator fraud. *Id.* at

29-30.

The evidence and arguments presented at trial established the following:

A. The Initiative and Referendum Process

The constitution of the State of Colorado permits its citizens to place propositions on the ballot through the initiative process. [Colo. Const. Art. V, § 1](#). Proponents of a measure have two years to qualify an issue for the ballot, but may only propose Taxpayer's *Bill of Rights*¹ measures — issues pertaining to taxes — for statewide vote in odd years.

To qualify a measure, proponents must complete the statutorily mandated process as set forth in [Colo. Rev. Stat. § 1-40-101 et seq.](#) Proponents must first submit a draft of the proposed legislation to the Legislative Counsel Office for review and comment. [Colo. Rev. Stat. § 1-40-105\(1\)](#). Following a public hearing, the draft is submitted to the Title Board, to designate [*1260] a title (the measure's title cannot mislead or confuse voters) and a submission clause (paragraph summarizing the proposed legislation). [Colo. Rev. Stat. § 1-40-106](#). Once the petition title and the submission clause are set, proponents must provide the Secretary with a sample petition section which contains a circulator affidavit,² the ballot title, and the submission clause as approved by the Title Board. Thereafter, the Secretary must endorse a sample petition section and proponents may provide sequential copies of the petition section for circulation. Finally, proponents need to complete the circulation process in a six-month period, wherein they must collect the requisite

¹ The Colorado Taxpayer's *Bill of Rights*, [Colo. Const. art. X, § 20](#), is a constitutional amendment approved by Colorado voters during the 1992 general election. [Huber v. Colo. Mining Ass'n, 264 P.3d 884, 886 \(Colo. 2011\)](#). The amendment requires, among [**5] other things, that governmental entities obtain voter approval before imposing any tax increases or extending tax legislation set to expire. *Id.*

² Circulators are required by law to sign an affidavit in the presence of a notary attesting, among other things, that they witnessed every signature in the petition section, that they individually circulated the petition, that every signature in the petition is from a registered voter, and that they understand Colorado law. [Colo. Rev. Stat. § 1-40-111\(1\)](#); see also Ex. C-97 (all citations to exhibits in this Order are to exhibits admitted at trial).

[**6] number of valid signatures³ to present to the Secretary for review.⁴ The signature-gathering process is the matter at issue in this case.

B. Section 1-40-112(4)'s Effect on the Cost of Signature-Gathering

1. Pay-Per-Signature vs. Hybrid Compensation

The testimony from both sides established that the effect of [§ 1-40-112\(4\)](#) is to raise the per-signature cost to a petition entity. The cost of running signature-gathering campaigns will increase because the hybrid scheme excludes some professional circulators from working in Colorado and makes the signature-gathering process significantly less efficient. The evidence, however, did not provide an easily determinable method to quantify that increase in costs.

a. Pool of Circulators

At the preliminary injunction hearing, the Court found that petition entities⁵ in Colorado rely on a group of itinerant professional circulators⁶ to perform signature-gathering activities. Docket No. 60 at 7. Testimony from the preliminary injunction hearing established that itinerant professional circulators are integral to signature-gathering [****8**] campaigns because they (1)

are able to gather a large number of signatures in a short amount of time, (2) do not require training because they are familiar with the laws of various states, and (3) are easy to locate. *Id.* at 6. The testimony at trial, however, demonstrated [****1261**] that petition entities are not so dependent on professional circulators, but instead rely on a variety of circulators during signature-gathering campaigns. Dan Kennedy, owner of Kennedy Enterprises LLC, a petition entity in Colorado, testified that petition entities typically rely on three types of circulators: (1) low-volume but high-validity professionals⁷ (i.e. individuals who occasionally circulate petitions for additional income); (2) medium-volume professionals (i.e. individuals who circulate on a part-time basis and produce an hourly average of 15 to 30 signatures); and (3) high-volume itinerant professionals (i.e. individuals who rely on signature-gathering campaigns for their primary income and travel between states in search of the best compensation).⁸

Jon Caldara, president of plaintiff The Independence Institute,⁹ testified that his 2010 Healthcare Choice measure would not have qualified for the statewide ballot without professional circulators. Caldara stated that, between April 2010 and August 2010, his all-volunteer signature-gathering effort yielded just 20,000 signatures.¹⁰ Only after this Court enjoined [§ 1-40-112\(4\)](#) and he retained Kennedy Enterprises to enlist professional circulators was his signature-gathering campaign able to collect the necessary 110,676 signatures.¹¹ See Ex. B-43 at 9. Kennedy estimated that

³The statute requires that the petition signatures collected must be from electors who are registered to vote in Colorado. [Colo. Rev. Stat. § 1-40-111\(1\)](#). The Secretary does not count signatures if the name on the petition section is not found in the voter registration database. The Secretary also does not count signatures if the registered voter's name is found in the voter registration database, but the address provided in the petition section does not match the address in the database. [Colo. Rev. Stat. § 1-40-116\(3\)](#).

⁴The number of valid signatures required must be in an amount equal to at least five percent [****7**] of the total number of votes cast for all candidates for the Office of Secretary of State during the last preceding general election. The amount of valid signatures required in 2012 was 86,105; this number was 76,047 for both the 2010 and 2008 election cycles.

⁵Petition entities are defined as "any person or issue committee that provides compensation to a circulator to circulate a ballot petition." [Colo. Rev. Stat. § 1-40-135\(1\)](#). [****9**] Petition entities are the primary signature gatherers in Colorado, with five petition entities currently operating in the State.

⁶Circulators are individuals who carry petitions and attempt to persuade registered voters to sign a petition section.

⁷The testimony sometimes referred to these circulators as low-volume but high-validity. This Order will refer to the low-volume but high-validity professionals as low-volume professional circulators.

⁸During the trial, witnesses sometimes referred to the itinerant professionals as "nomads." This Order will refer to these individuals as "itinerant professionals."

⁹The Independence Institute is a think tank whose mission is to promote public policies that enhance personal and economic freedom.

¹⁰Michael Arno, the owner of a petition entity in California, knew of only one instance of a successful all volunteer effort in the 1980s. The volunteer effort was to pass a measure to protect the California mountain lion and its habitat. The measure was so popular that it barely faced opposition. See [Outfitter Props., LLC v. Wildlife Conservation Bd.](#), 207 Cal. App. 4th 237, 237-38, 143 Cal. Rptr. 3d 312 (Cal. App. 3d 2012) (discussing Proposition 117).

¹¹In 2010, Colorado required 76,087 valid signatures to qualify

40% of the **[**10]** circulators working the Healthcare Choice measure were itinerant professionals. He testified that itinerant professionals are important to all signature-gathering efforts because they do not require training,¹² have a high validity rate, and consistently collect 30 signatures in an hour and sometimes can collect 100 signatures in an hour.

Kennedy Enterprises contracted with Lamm Consulting, a petition entity in Colorado, to gather signatures on the Healthcare Choice Measure. Scott Lamm, owner of Lamm Consulting, also testified that itinerant professionals were the first contacted to circulate that petition. Lamm relied on itinerant circulators because only seven and a half weeks remained to collect signatures after the Court enjoined [§ 1-40-112\(4\)](#). In Lamm's words, the signature-gathering campaign had "no time to **[*1262]** waste on training people or orienting people on what we needed to do."

The evidence at trial established that any campaign performed without professional circulators would likely spend additional time and resources training new circulators. Although proponents have six months to collect signatures in Colorado, testimony **[**12]** revealed that, due to legal challenges,¹³ signature-gathering efforts are never conducted within a full six-month window. Additionally, new circulators require at least a week of training before they are able to collect signatures at a consistent rate. Thus, as the time to collect signatures grows shorter, professional circulators are an increasingly important part of a successful signature-gathering campaign.¹⁴

a measure for statewide vote. Petition entities collect additional signatures to create a "buffer" zone in anticipation that some of the collected signatures are invalid. For example, Caldara needed to provide 76,087 valid signatures **[**11]** to qualify his Healthcare Choice measure for the ballot but contracted with Kennedy Enterprises to collect 110,000 signatures with a 75% validity rate. Ex. B-43.

¹²Lamm and Kennedy testified that itinerant professionals attend a single one-hour training session at the beginning of a campaign in order to review some key statutory provisions regarding the signature-gathering process in Colorado.

¹³Individuals unsatisfied with the Title Board decision may file a challenge with the Secretary within seven days of the decision. [Colo. Rev. Stat. § 1-40-107\(1\)](#). Registered voters may challenge Secretary's statement of sufficiency. See [Colo. Rev. Stat. § 1-40-118](#). Caldara said that challenges to the statement of sufficiency raise the cost of qualifying petitions and delay the completion of signature-gathering drives.

Edward Blaszak, who owns a pay-per-hour signature gathering firm **[**13]** in Oregon and has run pay-per-hour campaigns in other states, testified about the importance of well-trained petition circulators. Blaszak stated that the training he provides to new circulators allows them to become efficient circulators. For example, during a petition campaign, the first day at Blaszak's company includes intensive training sessions where circulators practice pitching a proposed measure to registered voters, role playing activities where circulators simulate actual conditions, and on-site training once new circulators are out in public. Moreover, Blaszak often retrains poorly performing circulators rather than terminating them so long as they continue to provide adequate effort.

Lamm, Kennedy, Blaszak, and William Huckins, one of Blaszak's circulators, testified that, although petition circulation is not a difficult concept to understand, it is not an easy task to master. Lamm opined that only one out of every ten individuals who attempts to circulate is ultimately successful, while Huckins testified that it took him a "week [to] two weeks" to acquire the necessary skills. Edward Agazarm, who has been involved in signature-gathering for 19 years, testified that new **[**14]** circulators are less productive because they have not acquired the skills necessary to identify eligible voters and collect a large number of signatures. Agazarm, Lamm, Blaszak, and Kennedy testified that nonprofessional circulators' lack of skills typically results in lower overall production and lower validity rates.

The evidence at trial established that [§ 1-40-112\(4\)](#) would likely exclude some professional circulators (both itinerant professionals and low-volume professional circulators) from working in Colorado. The testimony demonstrated that itinerant professionals are driven primarily by their earning potential. Jacob Thaler and David Vaughn, two pay-per-signature itinerant professionals, testified that they would work in Colorado under [§ 1-40-112\(4\)](#) if they could earn between \$30 to \$50 per hour. Jeffrey Zax, professor of economics at the University of Colorado, Boulder, testified that earning potential is an important criteria itinerant professionals consider when choosing signature-gathering

¹⁴Edward Blaszak, who owns a pay-per-hour signature gathering firm in Oregon, testified that his inability to qualify the casino initiative in Oregon was due in part to the "condensed time-frame." In that drive, Blaszak charged proponents \$5 per signature to collect signatures at a cost of \$600,000.

campaigns.¹⁵

Zax opined that itinerant professionals avoid working in pay-per-hour states such [*1263] as Oregon because the hourly rate for circulators in those states is between \$9 and \$12 per hour. He testified that professional circulators would work in Colorado if their compensation was closely linked to productivity.¹⁶ Zax described a hybrid compensation model consistent with [§ 1-40-112\(4\)](#) that he argued would allow itinerant professionals to maintain the earning potential they possessed under a pay-per-signature system.¹⁷ Zax testified that itinerant professionals could earn \$35 per hour, which consisted of an hourly wage of \$28 and a 20¢ bonus for every signature collected up to 35. Petition entities could also replicate this hybrid compensation scheme by calculating a 20% bonus rate from the anticipated hourly production total for an itinerant professional.

Despite the theoretical plausibility of Zax's model,¹⁸ the Court finds that [§ 1-40-112\(4\)](#) will likely deter most itinerant professionals from working in Colorado. First, there was no testimony that any pay-per-hour signature gathering entity pays circulators the \$28 to \$50 per hour that pay-per-signature itinerant professionals can earn. Blaszak typically pays \$14 per hour.¹⁹ Second, the

¹⁵ Huckins was the only circulator who testified that working with a group towards a common goal was more important than his earning potential. The Court finds that Huckins [*15] is not representative of the overwhelming majority of circulators.

¹⁶ Arno testified that some itinerant professionals could be attracted to a hybrid system. Blaszak also testified that he has attracted a couple of itinerant circulators to his petition entity.

¹⁷ Zax explained that, if a circulator under a pay-per-signature compensation scheme earns [*16] \$1 per signature and collects 35 signatures in an hour, he will earn \$35 per hour. Under [§ 1-40-112\(4\)](#), a circulator could earn \$35 for 35 signatures in an hour if he had a base salary of \$28 per hour or 80% of his typical earnings in a hour-and the petition entity offered the circulator a bonus of 20¢ for each signature in an hour up to 35 signatures. The maximum bonus or incentive per hour would equal \$7, allowing the circulator to earn up to \$35 in an hour as long as he maintained the same rate of collection for each hour worked.

¹⁸ Zax admitted that he has not interviewed any circulators, either pay-per-hour or pay-per-signature, [*18] and that he did not review the testimony of any circulators.

¹⁹ Blaszak testified that he pays part-time employees, those who work fewer than 30 hours a week, \$10 per hour. Full-time

flexibility afforded to itinerant professionals by the pay-per-signature model would not be available under a hybrid compensation scheme. Moreover, because a petition entity operating under [§ 1-40-112\(4\)](#)'s hybrid scheme must exert more control over its circulators, itinerant [*17] professionals will likely decline to work under such conditions. According to Arno, itinerant professionals want the freedom to work in places and during times they are likely to gather a high volume of signatures (e.g. grocery store after 6:00 p.m., outdoor events, or sporting events). Thaler and Vaughn testified that they had reservations about pay-per-hour systems because they would not adequately compensate them for the unusually high production days when they can collect up to 100 signatures in an hour.²⁰ Thus, imposing restrictions on itinerant professionals' freedom to work where they want and when they want is likely to not only curtail their production, but also to result in certain professionals' refusal to submit to such conditions. Additionally, the uncertainty surrounding circulators' employment status (i.e. employee or independent contractor) under a hybrid [*1264] system will likely deter most itinerant professionals from working in Colorado just as they currently avoid Oregon.²¹ Consequently, the net effect of [§ 1-40-112\(4\)](#) will be to deter the majority of itinerant professionals.

The Court finds that the hybrid scheme will also eliminate low-volume professional circulators. Kennedy and Lamm testified that, because low-volume professional circulators collect only a few signatures during any given week, it would not be economically feasible to compensate these circulators with an hourly wage. Additionally, they [*19] testified that, because it is not feasible to pay low-volume professionals by the hour, the only alternative under the hybrid scheme would be to pay low-volume professional circulators 20¢ per signature. However, low-volume professional

employees earn \$14 per hour.

²⁰ This is particularly the case under bundling. Bundling occurs when circulators carry two or more petition sections contemporaneously. A circulator can significantly increase his earning potential under a pay-per-signature system by utilizing bundling if he can convince one voter to sign multiple petition sections at the same time.

²¹ In 2002 Oregon voters passed Measure 26 which bans the use of pay-per-signature compensation for circulators in connection with ballot initiatives in the State of Oregon. Measure 26's constitutionality was challenged in federal court and was upheld by the Ninth Circuit in [Prete v. Bradbury, 438 F.3d 949 \(9th Cir. 2006\)](#).

circulators would not find compensation of 20¢ per signature sufficient to continue signature-gathering activities. By contrast, Lamm and Kennedy testified that, under a pay-per-signature system, they can collect signatures from low-volume professional circulators without oversight because their low productivity (i.e. a net gain of five to fifteen signatures over the course of a week) garners the same compensation regardless of the length of time to collect. Kennedy and Lamm both testified that the constant flow of high-validity signatures from low-volume professional circulators can account for 20% of total signatures. These signatures are essential because the high validity rate decreases the burden of collecting "buffer" signatures.

Without access to the majority of itinerant professionals and low-volume professional circulators, petition entities will have to expend more resources training new circulators. In addition, petition entities will have **[**20]** to compensate circulators for more hours of work in order to generate the 20% of signatures usually provided by low-volume professional circulators. When time is of the essence, the necessarily greater reliance on new circulators under [§ 1-40-112\(4\)](#) increases the likelihood of poor validity and thereby makes it more likely that a signature-gathering campaign will be unsuccessful.²² As a result, the loss of itinerant professionals and low-volume professional circulators is likely to raise costs for proponents and make it less likely that an issue qualifies.

b. Inefficiency Costs

The testimony at trial established that [§ 1-40-112\(4\)](#) would significantly decrease the efficiency of signature-gathering campaigns. Lamm, Kennedy, and Albie Hurst, an employee of Lamm Consulting, testified that circulators in Colorado under their pay-per-signature models receive compensation only for the signatures they provide **[**21]** and are not compensated for training or travel time.²³ Additionally, Kennedy and Lamm testified that their firms review petition sections to determine validity rates.²⁴ Circulators with validity rates

[*1265] lower than 75% have their compensation partially reduced.

Kennedy testified that he has relatively low day-to-day expenses. He hires his daughters or temporary agency workers to perform office functions. On signature collection days, which happen **[**22]** twice a week, crew managers²⁵ help perform validity checks and Bonnie Todd, a circulator who is also a licensed notary, usually notarizes petition sections. Moreover, because everyone performing work on behalf of Kennedy Enterprises is considered an independent contractor, completing payroll does not require specialized skill. Kennedy testified that the hybrid scheme would increase his costs of conducting a signature-gathering campaign because he would have to collect signatures daily, could not reduce circulator compensation for low validity rates, and would have to compensate circulators for activities that do not directly yield signatures such as training, rest breaks, and travel time.

Agazarm, who has participated in both pay-per-signature and pay-per-hour campaigns in the State of Oregon,²⁶ testified that circulators are not as productive under pay-per-hour systems. Agazarm stated that, because circulator compensation is not tied to

²⁴ To perform validity checks, petition entities purchase the official list of registered voters from the Secretary of State. The official list contains the names and addresses of all registered voters in Colorado. Petition entities then take a random sample of names from petition sections and compare them to the Secretary's official list. Petition entities mark names or addresses in petition sections as invalid if they do not match the names and addresses in the official list. Additionally, petition entities mark signatures as invalid if they believe the signatures were forged.

²⁵ Petition entities usually engage three levels of independent contractors. First, they enter into an independent contract agreement ("ICA") with an area coordinator who is in charge of a large geographic area of the State (i.e. northern Colorado, the Denver metro area, and southern Colorado) but does not collect signatures. Petition entities then sign ICAs with crew managers who are professional circulators in charge of small groups of circulators. The crew managers collect signatures and are responsible **[**23]** for choosing circulators based on reputation and previous work experiences. Finally, petition entities enter into ICAs with circulators based on the recommendation of crew managers.

²⁶ In 1999, Agazarm worked in Oregon as a circulator compensated on a pay-per-signature basis and in 2003 he worked in Oregon as a volunteer coordinator for a pay-per-hour campaign.

²² Blaszak testified that he only had seven weeks to circulate petitions for the casino initiative in Oregon and, although Blaszak was able to gather the requisite number of signatures, the measure failed because reliance on newly trained circulators significantly lowered his validity rate.

²³ Occasionally, petition entities provide advance payments to highly coveted circulators for travel and lodging costs, which are deducted from circulators' future earnings.

productivity under a pay-per-hour system, circulators "shirk"²⁷ their responsibility to gather signatures. He further testified that shirking increases a petition entity's exposure to loss because circulators are compensated regardless of how many signatures they collect. Shirking, however, is non-existent in a pay-per-signature system because circulators are not compensated if they fail to collect signatures.

Arno, who has qualified more than 650 initiatives nationwide since 1979, [**24] testified that the cost of running a pay-per-hour drive can double the cost of a pay-per-signature campaign. Arno based this estimate on a pay-per-hour campaign he performed in Oregon after the passage of Measure 26. Arno testified that, under a pay-per-signature system, he could collect 140,000 signatures in Oregon at a rate of \$1.55 per signature for a total of \$217,000. However, in 2003, after the passage of Measure 26, he spent over \$500,000 to collect the same number of signatures. In addition to the added costs identified by Agazarm and Kennedy, Arno testified that pay-per-hour campaigns increase costs because petition entities must hire additional field supervisors to counter shirking, pay overtime to circulators who work longer than 8 hours in a day without permission, [*1266] and cannot reduce circulator compensation even if circulators report inflated hours.

This testimony was consistent with Blaszak's experience conducting pay-per-hour campaigns. Blaszak testified that he compensates circulators for training and travel time and has field managers supervise circulators. Additionally, Blaszak testified that, in order to counter shirking, his circulators report signature totals twice [**25] daily. Blaszak provides bonuses in the form of movie tickets and pizza parties to increase production.²⁸ Blaszak terminates a circulator if a circulator consistently collects below a certain number of signatures.²⁹

²⁷ Shirking occurs when circulators do not provide the appropriate effort in return for the hourly wage.

²⁸ Blaszak testified that only 1.8% of the circulators utilized the bonus during his campaign in California.

²⁹ Although Blaszak did not provide a minimum number of signatures necessary for a circulator to avoid termination, the pay schedule from his recent California campaign shows that the expectation is to collect at least 80 signatures in a 7-hour work shift, or 11 signatures per hour. See Ex. D-5. Blaszak's circulators work 8-hour shifts with a 1-hour break.

Zax acknowledged that a principal weakness of a pay-per-hour system is that circulators will attempt to shirk when given the opportunity. However, Zax opined that the 20¢ per signature incentive payment built into [§ 1-40-112\(4\)](#) could effectively deter shirking. Zax also believed that itinerant professionals would not misrepresent their hours (i.e. collect 35 signatures in 30 minutes while reporting work for the whole hour) because petition entities and circulators could renegotiate contracts weekly if an itinerant professional's [**26] production exceeded compensation. Zax testified that the hybrid compensation model protects both itinerant circulators and petition entities from the vicissitudes of signature-gathering because itinerant professionals could potentially earn \$28 per hour even when circulating in poor conditions (i.e. bad weather) and, on the other hand, petition entities would be underpaying circulators, compared to pay-per-signature compensation schemes, during periods of unusually high production.

The Secretary's argument about the flexibility and viability of the hybrid compensation scheme cannot survive careful consideration. From a theoretical perspective, there is no discernible difference between the use of a hybrid system and a pay-per-signature system. Under either system, the economic reality for itinerant professionals is that they would earn \$35 for collecting 35 signatures in an hour. Moreover, although Zax argues that a hybrid system protects itinerant professionals against poor working conditions, the testimony from Arno, Kennedy, and Thaler established that itinerant professionals in a pay-per-signature system do not work in poor weather conditions. Thus, to the extent Zax's model anticipates [**27] protecting itinerant professionals from poor conditions, the testimony at trial established that this is an assurance that is not required and would not provide an incentive to attract itinerant professionals to the hybrid scheme described by Zax.

Second, the prospect of renegotiating a contract is insufficient motivation for itinerant professionals to counter shirking. Thaler and Vaughn, the two itinerant professionals at trial, testified that the prospect of providing free signatures to petition entities in exchange for future contract renegotiation was unappealing. Itinerant professionals earn on average \$1 for every signature collected. Under Zax's hybrid model hypothetical, once itinerant professionals meet their negotiated signature threshold (i.e. 35 signatures in an hour), they have no incentive to gather additional signatures. As Blaszak testified, using a quota is more

of a stick, meaning that circulators will work [*1267] only as hard as necessary to reach the quota and, once reached, will not provide additional effort.³⁰

The likely effect [**28] of the hybrid compensation scheme described by Zax is that it will not attract itinerant professionals and the lower training cost and higher productivity associated with them and, as a result, will not give petition entities the benefit that Zax noted of undercompensating such persons during periods of higher productivity.

The Court finds that Zax's hybrid model would significantly increase the costs of a signature-gathering campaign. Zax's model requires that petition entities provide hourly compensation to circulators for orientation, travel costs, and paid rest breaks which are not compensated under a pay-per-signature model. Petition entities will also have to provide additional compensation for crew managers who would have significantly greater supervisory responsibilities. Petition entities will likely have to collect signatures daily to ensure that new circulators gather an adequate number of signatures. These daily collections will increase costs in two ways: first, petition entities will have to secure the daily services of a notary; and second, petition entities will have to hire an employee to track circulator productivity and make a decision to either terminate employment, [**29] renegotiate the contract, or provide more training. Moreover, negotiating employment contracts on a frequent basis increases exposure to lawsuits for wrongful terminations, employment benefits, or other labor related claims.³¹

Third, because the testimony indicated that only one out of ten new circulators develops into a professional circulator, petition entities will incur greater costs as they compensate unproductive circulators. For example, Blaszak testified that, even if a circulator provided only 10 signatures for a full 7-hour workday, the circulator would receive compensation of \$70³² for the hours

³⁰ Blaszak testified that he does not tell his circulators to gather 10 signatures per hour because otherwise they will only return 10 signatures.

³¹ Currently, petition entities are largely immune to unemployment claims because circulators are treated as independent contractors. Only one instance of an unemployment claim against a pay-per-signature entity was presented at trial.

³² As noted above, Blaszak's part-time employees earn \$10 per hour. Assuming a full-time employee worked a 7-hour

worked that day. Although at some point the petition entity could terminate an unproductive worker, the cumulative daily loss of \$70 to compensate unproductive circulators will increase the costs of the entire campaign.³³

Accordingly, the Court finds that the cumulative inefficiencies likely to occur as a result of [§ 1-40-112\(4\)](#) will significantly increase the costs of running signature-gathering campaigns.

c. Independent Contractor vs. Employee

The testimony at trial did not establish whether circulators were currently employees or independent contractors under Colorado law.³⁴ As noted above, petition [*1268] entities in Colorado currently classify circulators as independent contractors. However, a 2003 audit of Lamm Consulting by the Colorado Department of Labor and Employment ("CDLE") reclassified Lamm's circulators from independent contractors to employees. See Ex. D-79. Lamm did not appeal the CDLE's decision; instead, Lamm entered into an installment agreement with the CDLE accepting the department's decision. See Ex. D-86. Nevertheless, to the extent Lamm's failure to appeal the CDLE's [**31] decision might have defined the employment status of his circulators, Kennedy and other petition entities have not had to reclassify their circulators.³⁵

shift, he would be [**30] compensated \$98 for the 10 signatures returned.

³³ Blaszak testified that it is unlikely a new circulator could work an entire day and provide only 10 signatures because circulators report signatures twice a day. However, he testified that he would compensate the circulator for the day even if he returned fraudulent signatures.

³⁴ Under Colorado law, an individual performing activities on behalf of a business is generally considered an employee. To rebut the "employee" presumption, an employer must prove that the worker is "free from control and direction in the performance of the service, both under his contract for the performance of service and in fact." [Colo. Rev. Stat. § 8-70-115\(1\)\(b\)](#). [**32] To determine whether an employer has "control and direction" over an employee, courts examine the degree of control the employer has over the means and methods of the employee's work, the ability to terminate a worker at any time without liability, and the ability to set quality standards. [Carpet Exch. of Denver, Inc. v. Indus. Claim Appeals Office, 859 P.2d 278, 281 \(Colo. App. 1993\)](#).

³⁵ Arno testified that he was not required to reclassify his circulators as employees after an audit by both the Internal

See [Colo. Rev. Stat. § 8-74-108](#) (determinations made under the Employment Security Act are not binding on any other agency or court); see also [Gloston v. ITT Fed. Servs. Int'l Corp., No. 06-cv-02168-PSF-BNB, 2007 U.S. Dist. LEXIS 45418, 2007 WL 1830486, at *3 \(D. Colo. June 21, 2007\)](#) (finding that outcomes made in an unemployment proceeding are not binding in any subsequent litigation not brought under the Colorado Employment Security Act). Because a determination of whether circulators are employees or independent contractors is usually a fact intensive inquiry, and such facts were not presented at this trial, the Court will not resolve this legal issue as it is not necessary for the holding in this case.³⁶

d. Approximate Cost Increase

The evidence at trial established that an increase in signature gathering **[**33]** costs is unlikely to have an effect on individuals or entities who can raise large sums to qualify a measure for the statewide ballot. However, the cost increase is likely to disproportionately impact individuals with limited resources by making measure qualification unaffordable. Caldara, Mason Tvert, and Jennifer Gratz testified that they had to suspend qualifying potential measures in 2010 because of the cost increase associated with [§ 1-40-112\(4\)](#). Although the testimony at trial demonstrated that the per signature price is unlikely to increase to \$5.50 because of [§ 1-40-112\(4\)](#), the evidence established that the statute will likely raise prices from a baseline of \$2.07 per signature to \$2.50 per signature (18%) and possibly to more than \$3 per signature.

Kennedy testified that he usually charges a proponent \$2.07 per signature for unbundled petitions under a pay-per-signature model. See also Ex. B-43. On the other hand, Blaszak testified that he typically charges a proponent \$5³⁷ per signature **[*1269]** for unbundled

Revenue Service ("IRS") and the Employment Development Department of California. Kennedy testified that, after seeking his accountant's professional opinion, he was advised that circulators were independent contractors under Colorado law.

³⁶ Terry West, an audit manager for the Colorado Department of Labor and Employment, testified that the CDLE usually undertakes a comprehensive review of an employee's duties in connection with the business when making a determination of whether an employee is misclassified as an independent contractor. See, e.g., Ex. D-32; [Colo. Rev. Stat. § 8-70-115](#).

³⁷ In 2006 Blaszak proposed an hourly rate of \$30 for 16,500 hours of supervised collection which equals \$495,000. See Ex.

petitions.³⁸ Blaszak, however, attributed 15 to 20% of his proposed price per signature to the fact that he withholds Federal Insurance Contributions Act ("FICA") tax and provides **[**34]** unemployment and workers' compensation insurance benefits. Notwithstanding, when discounting 20% from Blaszak's \$5 per signature price, his average bid for an unbundled measure remains close to \$4. Assuming Blaszak's typical bid was further discounted from what has been termed his "Cadillac" services, such as 13¢ for creating a voter database, 30¢ for background checks and volunteer recruitment, and 12¢ for processing volunteer signatures, his typical charge remains at \$3.45. Moreover, at the preliminary injunction hearing, Blaszak testified that he would likely bid \$2.50 per signature for a Colorado signature-gathering campaign. Docket No. 48 at 128.³⁹

In addition to raising the per-signature price of campaigns, [§ 1-40-112\(4\)](#) deprives petition entities of the flexibility they currently enjoy when negotiating contracts. Arno, Kennedy, and Lamm testified that pay-per-signature entities can sometimes negotiate to pay circulators as little as 50¢ per signature in order to lower costs to proponents. Because overhead for petition entities under a pay-per-signature model is typically low, pay-per-signature entities can nevertheless make a profit despite significant decreases in contract prices. See Ex. A-5 at 5-6. The testimony showed that petition entities will not have this flexibility under a hybrid system as they will be forced to pass on their overhead costs **[**36]** to proponents in order to remain profitable.⁴⁰ Blaszak testified that an unbundled pay-per-hour

D-28. Blaszak testified that this contract had terms similar to those he currently offers. Blaszak lowered his pay-per-hour rate from \$5 to \$2.65 in California by bundling petitions.

³⁸ Blaszak testified that the Casino initiatives are currently re-run as bundled petitions and are averaging \$3.25 per signature, while the other two bundled petitions he is running are averaging \$2.75 and \$2.40 per signature.

³⁹ Some factors **[**35]** that influence the cost of a signature-gathering campaign include weather, local competition, time available to circulate, election regulations, the popularity of the issue, commercial access, the number of signatures required, the regulatory scheme, and bundling. Because pay-per-hour and pay-per-signature entities are subject to the same external factors when submitting bids to proponents, the majority of these factors will be consistent for proponents submitting bids in Colorado.

⁴⁰ Blaszak testified that it would cost \$25,000 in overhead to run his company in Colorado.

campaign was likely to be too expensive for individuals with limited funds. He often advises individuals with limited funds to run a campaign using friends and acquaintances. Given that campaigns run by nonprofessionals are unlikely to succeed, the Court finds that the cost increase associated with [§ 1-40-112\(4\)](#) is likely to lower the chances of under-funded proponents succeeding in the initiative and referendum process.

C. Section 1-40-112(4)'s Effect on Reducing Fraud and Invalidity

1. Validity Rates

Kathryn Mikeworth, the operations manager for the Colorado Secretary of State, testified about the signature verification process.⁴¹ She said that the Secretary performs a random sample of 5% of the signatures or a minimum of 4,000 signatures on a petition. [Colo. Rev. Stat. § 1-40-116\(4\)](#). The Secretary has 30 days to verify signatures and issue a statement of sufficiency, which explains whether proponents have submitted a sufficient number of valid signatures to qualify for the ballot. [Colo. Rev. Stat. § 1-40-118\(1\)](#). **[**37]** If the random sample establishes that the number of **[*1270]** "presumed valid signatures"⁴² is 90% or less of the number needed to qualify for the ballot, the petition is deemed insufficient. If the random sample establishes that the number of presumed valid signatures is over 110% of the minimum number of signatures required to qualify for the ballot, the measure automatically qualifies. However, if the random sample shows that the number of signatures is more than 90%, but less than 110% of the number needed to qualify, the Secretary must undertake a line-by-line review of the petition section. This line-by-line review must be completed within the original 30-day window, meaning that if it takes the Secretary 20 days to conduct a sample of signatures, he has 10 days left to do a line-by-line review of the same petition section.⁴³

⁴¹ Prior to her current position, Mikeworth was the manager of the ballot access program and oversaw the qualification of initiatives for the statewide ballot.

⁴² A circulator affidavit creates a presumption of validity for all signatures on the petition section. These signatures are then counted as valid unless proven otherwise.

⁴³ During the 2007-2008 election cycle, **[**38]** the Secretary examined approximately 182,000 signatures from 11 proposed measures during the same 30-day window. To manage the influx of signatures, the Secretary usually employs 30 to 40

The Secretary's statement of sufficiency must indicate the number of signatures sampled and whether the number of valid signatures was less than 90% or less than 110%. See, e.g., Ex. 132 (Statement of Sufficiency). If the signatures provided by a proponent are insufficient, then the proponent can cure the deficiency by collecting additional valid signatures to meet the statutory threshold (76,047 valid signatures in 2008). "Cure" signatures must be provided to the Secretary no later than three months before the election is held.

The Secretary follows Rule 17.3 of the Colorado Secretary of State Election Rules to perform the line-by-line review of petition sections.⁴⁴ See Ex. C-51. The Secretary rejects a signature as invalid if the name on the petition section is illegible, the signature is a duplicate, or the name listed in the petition section does not match the address listed in the registered voter database.⁴⁵ To verify submitted signatures, **[**39]** the Secretary compares the name and the address listed on the petition section to SCORE, the voter registration database for the State of Colorado.⁴⁶ Certain restricted databases in SCORE contain copies of registered voters' signatures. The Secretary, however, does not compare the signatures in the petition section with those in SCORE because it is a security risk to grant temporary employees access to restricted databases.⁴⁷

The testimony from both sides established that signature compensation schemes have no measurable

temporary staff members during the petition review cycle.

⁴⁴ The Secretary has little discretion to reject signatures as invalid and must accept borderline signatures as valid because the circulator affidavit establishes a presumption of validity.

⁴⁵ The Secretary undertakes a multi-step process to identify a registered voter if the name is illegible. First, he searches by name; second, he searches a combination of a few letters of the first name; third, he searches a combination of a few letters of the last name; and, fourth, he tries to locate the name by the address listed.

⁴⁶ At the time of trial, SCORE contained voter registration information for 3.4 million voters in the State of Colorado. The 3.4 million number included active and inactive voters. An inactive voter is an individual who has not participated in the previous **[**40]** November general election or has had a mailed ballot returned as undeliverable. Inactive voters accounted for 1.2 million voters in the database.

⁴⁷ Since 2001, 44 petition sections have gone through the Secretary's verification process and 41 have made the ballot.

impact on validity rates. Blaszak testified that his validity rate is usually around 72 to 74%,⁴⁸ [*1271] while Arno and Lamm testified that their validity rates are often between 70 and 75%. The testimony also demonstrated that petition entities attempt to curtail the collection of invalid signatures under both pay-per-hour and pay-per-signature systems. Lamm, Arno, Agazarm, and Kennedy testified that they reduce circulator compensation for validity rates below 75%. Blaszak testified that he provides extensive training to his circulators, performs "secret shopper" activities,⁴⁹ and holds daily validity checks to curtail the collection of invalid signatures. As Blaszak concluded, the validity rates for signatures provided to the Secretary under both systems is comparable, even if the validity of signatures gathered in the field differs.

Moreover, petition entities have an incentive to maintain high validity rates because failure to qualify an issue is detrimental to future business. For example, Lamm Consulting was replaced by another petition entity when it failed to qualify Tvert's marijuana initiative in 2010.⁵⁰ Caldara testified that he only contracts with Kennedy Enterprises because it "gets the job done." Caldara stated that, because the money paid for signature-gathering campaigns is non-refundable, proponents carefully select petition entities as proponents stand to lose significant sums if their measure fails to qualify for the ballot.⁵¹

Finally, none of the evidence presented linked low validity rates to fraud or professional circulators. On the contrary, low validity rates were usually attributed to new circulators who did not have the skills necessary to ask the right questions. Blaszak testified that his casino initiative in Oregon failed in part because of the "condensed time-frame" in which to collect signatures

and the overreliance on new circulators. In rare instances, the nature of the ballot initiative, by itself, can affect the validity rates. For example, Lamm attributed the failure of the marijuana initiative to the nature of the measure. Lamm and Hurst testified that overzealous signers of the marijuana initiative often lied about their age, whether they were registered voters, or whether they signed previous petition sections. Lamm and Hurst testified that the marijuana initiative had similar problems in Colorado in 2006 and in other states that have attempted to pass a similar measure. Accordingly, the evidence at trial established that invalid signatures are typically the result of inexperienced circulators or voter error, i.e. registered voters changing addresses without updating the voter registration card,⁵² illegible signatures, or individuals not knowing their current voter status. The testimony did not show that validity rates were affected by the form of compensation scheme.

2. Incidence of Fraud

Ballot petition fraud is a crime in the State of Colorado. [Colo. Rev. Stat. § 1-40-130](#). Examples of fraudulent circulator practices include forging signatures, misrepresenting [*1272] the issue, using an otherwise unqualified person to circulate petition sections on the circulator's behalf (surrogate fraud), signing a circulator affidavit without actually circulating the petition (false witnessing), and offering a registered voter something of value in exchange for a signature (inducement). Kennedy, Arno, Lamm, Hurst, and Blaszak testified that circulator fraud occurs regardless of the compensation scheme because certain individuals are prone to commit fraud. None of the evidence, however, established the rate of fraud in the initiative process or the amount of fraud attributed to pay-per-signature circulators.

Mikeworth and Hillary Rudy, the senior legislative and policy analyst for the elections division of the Secretary of State's office, testified that, because of a lack of resources, the Secretary is unable to detect circulator fraud that occurs in the field, such as misrepresentation, surrogate fraud, false witnessing, and inducement. Rudy testified that the Secretary is also unable to detect forgeries when petition sections are reviewed because the temporary employees who are often hired to conduct validity checks do not have access to restricted

⁴⁸ The [*41] highest possible validity rate in the State of Oregon is 92%; however, even when adjusting for this baseline, Blaszak's validity rates are only 5 to 7% higher when compared to pay-per-signature entities.

⁴⁹ Blaszak's managers sometimes disguise themselves as registered voters and approach new circulators about petition sections to determine whether the new circulator is responding to training.

⁵⁰ The marijuana campaign had a validity rate of 51% in 2010. Lamm also testified that he did the marijuana initiative in 2006 and had only a validity rate of 65%.

⁵¹ The proponents of the [*42] casino initiative in Oregon lost \$600,000 when it failed to qualify for the ballot.

⁵² The voter registration database is a live system so that as soon as a voter registration is updated, the system makes the change retroactively.

SCORE databases.⁵³

The Secretary argues that pay-per-signature systems provide more of an incentive to commit fraud when compared to pay-per-hour systems or [§ 1-40-112\(4\)](#)'s hybrid scheme. However, the evidence at trial actually proved the contrary, namely, that the incentive to commit fraud is likely stronger under a hybrid scheme when compared to a pay-per-signature system.

Huckins, Blaszak, and Zax testified that one of the benefits of working under an hourly wage system is the security of guaranteed compensation **[**45]** for the hours worked. Yet both Blaszak and Zax acknowledged that an employee getting below a certain number of signatures should eventually be terminated. Blaszak testified that he terminates employees who consistently fail to reach a minimum number of signatures. As Arno noted, the security of guaranteed compensation is undermined by the pressure to maintain a minimum level of production. As a result, the existence of a minimum number of signatures that an hourly employee must gather creates an incentive to commit fraud. For example, if at the end of a given workweek, a circulator employed under a hybrid system of compensation is several signatures short of her weekly quota and knows she faces termination if she does not reach the quota, that circulator has an incentive to fraudulently obtain the remaining signatures. Under this scenario, an underperforming circulator in a hybrid system faces a stark choice: either provide fraudulent signatures and retain employment, or miss the weekly quota and forgo future compensation. Moreover, it is difficult to detect these fraudulent "fill-in" signatures because the other signatures on the petition section are usually valid. Therefore, the **[**46]** circulator's validity rate remains high because of the small chance of sampling the "fill-in" signatures. Although a hybrid scheme may decrease the incentive to commit fraud because it guarantees compensation, it will act to encourage fraud by pressuring nonproductive circulators to meet daily or weekly quotas, whether those quotas are stated or not.

On the contrary, the incentive to commit fraud under a pay-per-signature system is the possibility of earning an extra dollar for every fraudulently collected signature. Circulators in pay-per-signature systems have no pressure to meet weekly quotas, are not at risk of losing their positions, and, in fact, pay-per-signature entities rely on low-volume professional circulators to **[*1273]**

provide 20% of the overall signatures collected. Thus, any incentive to commit fraud in a pay-per-signature model is solely based on a circulator's desire to maximize his or her compensation. Arno, Blaszak, and Agazarm testified that large scale forgery is easily detectable⁵⁴ as evidenced by the examples of Claudia Kenny in Washington and Blaszak's employee in Maine.⁵⁵ Vaughn also testified that it is actually easier to collect signatures than to attempt forgery. **[**47]** Consequently, because large scale fraud is easier to detect, circulators who commit such fraud are unlikely to escape detection.⁵⁶ As a result, under a pay-per-hour system, the marginal return of forging a signature can be, by meeting a quota, retaining one's employment, whereas the marginal return of forging a signature under a pay-per-signature system is what is paid for a signature. Losing one's job is a greater incentive to commit fraud when compared to the prospect of earning an additional dollar.

From a theoretical viewpoint, pay-per-hour signature gathering, rather than pay-per-signature gathering, incentivizes fraud. However, the evidence at trial of actual fraud was minimal and established that fraud occurs under both pay-per-hour⁵⁷ and pay-per-signature systems because some individuals are simply prone to commit fraud.⁵⁸

⁵⁴ For example, large scale forgeries may be obvious because the petition section is in alphabetical order, all the male signatures are legible, all signatures have the same handwriting, or the petition section is clean.

⁵⁵ Kenny was a pay-per-hour circulator in the State of Washington who forged a large number of signatures; Agazarm was able to detect the fraud because her petition section was clean and all the signatures were of the same handwriting. Blaszak testified that one of his pay-per-hour employees in Maine requested to switch compensation to pay-per-signature. The next day the employee returned with 3,000 signatures, which Blaszak determined were fraudulently gathered due to the **[**48]** short turnaround.

⁵⁶ Because petition entities have the official list of registered voters' names and addresses, circulators are unlikely to escape detection if they provide a large number of false names and addresses.

⁵⁷ Blaszak testified that he had at least nine instances of circulator fraud in his recent campaign in California. See Ex. D-31.

⁵⁸ During the 2008 election cycle, Thomas Coombes, a Lamm Consulting pay-per-signature circulator, was charged with circulator fraud for inducing voters to provide signatures in

⁵³ There have been no reported incidents of a forged signature discovered by the Secretary.

II. CONCLUSIONS OF LAW

When plaintiffs challenge a State statute regulating the election process under the *First Amendment*, the court must first consider the "character and magnitude" of the burden the State's regulation imposes on plaintiffs' *First Amendment* rights and then weigh this burden against the precise interests the State contends justify the burden. [*Timmons v. Twin Cities Area New Party*, 520 U.S. 351, 358, 117 S. Ct. 1364, 137 L. Ed. 2d 589 \(1997\)](#). Regulations imposing severe burdens on plaintiffs' rights are subject to strict scrutiny and must be narrowly tailored to advance a compelling State interest. [*Id.* at 358-59](#); see also [*Yes On Term Limits, Inc. v. Savage*, 550 F.3d 1023, 1028 \(10th Cir. 2008\)](#) (noting that, to survive strict scrutiny, the State "has the burden [*1274] of proving that its [regulation] is narrowly tailored to serve a compelling state interest") (citation omitted). Regulations that impose lesser burdens, however, trigger less exacting review [*50] and are subject to a balancing test whereby "a State's important regulatory interests will usually be enough to justify reasonable, nondiscriminatory restrictions." [*Timmons*, 520 U.S. at 358-59](#). Because of the flexibility of the standard, there are no bright line rules that separate permissible election-related regulation from unconstitutional infringements of *First Amendment* Freedoms. *Id.*; see also [*Lee v. Keith*, 463 F.3d 763, 768 \(7th Cir. 2006\)](#) (describing the Supreme Court's flexible approach in similar *First Amendment* cases as a "sliding scale"). Accordingly, the Court must determine which standard of review will apply to [*§ 1-40-112\(4\)*](#). See [*Campbell v. Buckley*, 203 F.3d 738, 742 \(10th Cir. 2000\)](#).

Generally, whether a regulation faces a balancing test or strict scrutiny depends on the severity of the burden the regulation places on speech. [*Lee*, 463 F.3d at 768](#). Where a law appears on its face to regulate the initiative process, courts should engage in a searching inquiry to determine if, in regulating the process, a State has gone too far by instituting procedures which effectively limit

exchange for sunglasses. See Ex. D-47. Jerome Toliver, a Lamm Consulting pay-per-signature circulator, signed a circulator affidavit for a petition section he did not circulate (false witnessing). See Ex. C-83 at 16-20. Other complaints during the 2008 election cycle include allegations that certain circulators did not wear petition circulator [*49] badges, provided false and misleading statements about certain petitions, and used trickery to collect signatures. See Ex. C61-72. However, all of these complaints were dismissed for failure to state a claim. See Ex D-73 (dismissing claims identified in C61-C72).

underlying speech. Therefore, the essential consideration is how severe a burden a particular [*51] regulation effectively places on the underlying speech. See [*Timmons*, 520 U.S. at 358](#).

In [*Meyer v. Grant*, 486 U.S. 414, 108 S. Ct. 1886, 100 L. Ed. 2d 425 \(1988\)](#), the Supreme Court observed that initiative petition circulation necessarily involved "both the expression of a desire for political change and a discussion of the merits of the proposed change." [*Id.* at 421](#). The Court explained that, because petition circulation involves the type of interactive communication concerning political change, it is appropriately described as "core political speech." [*Id.* at 422](#). The Court characterized Colorado's statute barring the use of paid circulators as "a limitation on political expression" and applied "exacting" scrutiny because the statute imposed an unacceptable burden on the exercise of *First Amendment* rights. [*Id.* at 420-22](#).

In [*Buckley v. Am. Constitutional Law Found., Inc.*, 525 U.S. 182, 119 S. Ct. 636, 142 L. Ed. 2d 599 \(1999\)](#), the Supreme Court addressed three different provisions of a Colorado ballot initiative statute which required that (1) circulators be registered voters, (2) circulators wear identification badges, and (3) proponents of an initiative report the names and addresses of all paid circulators and the amount paid to each circulator. [*Id.* at 186](#). [*52] After describing petition circulation as core political speech, the Supreme Court explained that "'no litmus-paper test' will separate valid ballot-access provisions from invalid interactive speech restrictions; we have come upon 'no substitute for the hard judgments that must be made.'" [*Id.* at 192](#) (quoting [*Timmons*, 520 U.S. at 359](#)). Without specifying whether these restrictions imposed a severe burden on speech necessitating strict scrutiny or a lesser test, the Court struck down each of the three restrictions. The Court found that the regulations discouraged participation in the petition circulation process, which limited the number of voices available to convey a proponent's message and cut down the size of the audience that could be reached. [*Id.* at 194-95](#).

The reasoning employed by the Supreme Court in [*Buckley*](#) suggests that the level of scrutiny applicable in a case such as this depends on the extent to which the [*1275] relevant statutory provision burdens the expressive activities of the parties challenging its validity. See [*525 U.S. at 192*](#) (applying exacting scrutiny because the challenged statutory provisions "significantly inhibit[ed] communication with voters about proposed political [*53] change"); [*Prete v. Bradbury*](#),

[438 F.3d 949, 961-68 \(9th Cir. 2006\)](#) (reading *Buckley* to account not only for the existence of a "decrease in the pool of available circulators" in determining the severity of the burden on expressive activities resulting from a statutory provision, but also for the "degree of the decrease") (emphasis in original); [Citizens for Tax Reform v. Deters, 518 F.3d 375, 385-87 \(6th Cir. 2008\)](#) (applying strict scrutiny because the harsh penalties and the broad ban on the types of payments made the Ohio provision closer to the ban in *Meyer*); [Person v. New York State Board of Elections, 467 F.3d 141, 143 \(2d Cir. 2006\)](#) (applying a balancing test rather than strict scrutiny because the challenged statute did not significantly burden the plaintiffs' expressive activities); [Initiative & Referendum Institute v. Jaeger, 241 F.3d 614, 616-17 \(8th Cir. 2001\)](#) (applying what appears to be a balancing test and finding that plaintiffs "produced no evidence" that the regulation burdened their *First Amendment* rights, while the State presented evidence of fraud in support of the regulation).

Here, the Secretary contends that [§ 1-40-112\(4\)](#) imposes an insignificant burden on speech **[**54]** and should be subject to a balancing test under *Timmons*. Plaintiffs, on the other hand, contend that [§ 1-40-112\(4\)](#) is a severe burden on core political speech under *Meyer* and the statute should be subject to strict scrutiny.

A. Severity of the Burden

[Section 1-40-112\(4\)](#) states that "[i]t shall be unlawful for any person to pay a circulator more than twenty percent of his or her compensation for circulating petitions on a per signature or petition section basis." [Colo. Rev. Stat. § 1-40-112\(4\)](#). Plaintiffs argue that the hybrid scheme reduces the pool of available circulators and increases the costs of running a signature-gathering campaign as it significantly decreases efficiency.

Courts faced with challenges to statutes similar to [§ 1-40-112\(4\)](#) have reached different conclusions as to whether restrictions on per-signature compensation are subject to strict scrutiny or a balancing test. For example, in *Deters*, the Sixth Circuit applied strict scrutiny to a statute restricting per-signature compensation because the statute increased the cost of qualifying an initiative and likely decreased the number of professionals willing to collect signatures. [518 F.3d at 385](#). The Sixth Circuit found **[**55]** that eliminating all but one form of payment was not merely "academic" because preventing plaintiffs from providing bonuses, setting minimum signature requirements, or tying productivity to compensation stripped plaintiffs of the

means to motivate circulators, thereby making qualifying initiatives more expensive. *Id.* *Deters* rejected the State of Ohio's argument that pay-per-signature compensation created an incentive to forge signatures because the State had provided no evidence to that effect. [Id. at 387](#).

In *Prete*, the Ninth Circuit found that plaintiffs had not shown that pay-per-signature compensation significantly burdened their *First Amendment* rights because there was no evidence that the statute in question "caused a reduction in the number of available circulators or otherwise limit[ed] the size of plaintiff's audience." [438 F.3d at 965](#). The Ninth Circuit applied a balancing test and found that the statute was distinguishable from the statute in *Meyer* because it only prohibited one form of payment and allowed **[*1276]** for incentive payments and other tools to motivate circulators. [Id. at 952 n.1](#).

In *Jaeger*, the Eighth Circuit upheld a ban on per-signature compensation because plaintiffs **[**56]** had failed to provide evidence that "payment by the hour, rather than on commission, would in any way burden their ability to collect signatures." [241 F.3d at 617-18](#). Similarly, the Second Circuit in *Person* found that the plaintiff had failed to provide evidence that the ban on pay-per-signature compensation significantly burdened his expressive activities. [467 F.3d at 143](#). The Second Circuit explained that it found "insufficient support for a claim that the ban on per-signature payment is akin to the complete prohibition on paying petition circulators that was deemed unconstitutional in *Meyer*, or that the alternative methods of payment it leaves available are insufficient." *Id.*; see also [Bernbeck v. Gale, 2011 U.S. Dist. LEXIS 96972, 2011 WL 3841602 \(D. Neb. Aug. 30, 2011\)](#) (plaintiffs did not show evidence of a burden on their *First Amendment* **[*1277]** rights by a pay-per-signature requirement); [Citizens in Charge v. Gale, 810 F. Supp. 2d 916 \(D. Neb. 2011\)](#) (the State had not shown how its statute promoted its interest when it relied on only three instances of fraud).

Unlike some of the aforementioned cases, the plaintiffs in this case have provided evidence showing that [§ 1-40-112\(4\)](#) imposes a severe burden on their expressive **[**57]** activities. Although [§ 1-40-112\(4\)](#) is not a categorical restriction on one form of circulator compensation as in *Deters*, or a categorical exclusion of circulators, see [Buckley, 525 U.S. at 192-98](#) (exclusion of circulators not registered to vote); [Meyer, 486 U.S. at 414](#) (exclusion of all paid circulators); [Yes On Term Limits, 550 F.3d at 1028](#) (exclusion of out-of-state circulators); [Chandler v. City of Arvada, Co., 292 F.3d 1236, 1244 \(10th Cir. 2002\)](#) (exclusion of circulators that

were not residents of the city), the effect of the hybrid scheme is nevertheless significant as it excludes a key component of circulators from the initiative process. Although [§ 1-40-112\(4\)](#) allows for incentive payments to motivate circulators, the benefits of the incentive payments are outweighed by the exclusion of the most effective circulators and the additional costs the statute imposes on signature-gathering activities. See [Deters, 518 F.3d at 383](#) (although the availability of other payment methods might reduce the burden, the extent to which the more effective means are foreclosed is an important consideration).

As discussed above, the statute is likely to eliminate low-volume professional circulators **[**58]** from participating in the initiative process and likely to deter most itinerant professionals from working in Colorado. Their absence will make it significantly more difficult for proponents to qualify measures for the ballot. Without low-volume professional circulators and itinerant professionals, proponents will have to rely on volunteers and untrained paid circulators who are unlikely to "get the job done." Thus, the effect of [§ 1-40-112\(4\)](#) will be the exclusion from the initiative process of those who, through experience and self-selection, are the most efficient and effective circulators. See [Meyer, 486 U.S. at 424](#) ("The *First Amendment* protects appellees' right not only to advocate their cause but also to select what they believe to be the most effective means for so doing."). To the extent [§ 1-40-112\(4\)](#) prevents proponents from using individuals who would most effectively convey their message to the public, the statute places a substantial burden on the proponents' *First Amendment* rights, even if the statute only restricts proponents from using some, but not all, circulators. See [Krislov v. Rednour, 226 F.3d 851, 862 \(7th Cir. 2000\)](#) (finding that a circulator residency restriction **[**59]** imposed a significant burden on plaintiff's *First Amendment* rights even if it excluded only a few circulators).

The testimony at trial established that the effect of [§ 1-40-112\(4\)](#) will be to raise the per signature cost for a ballot petition campaign by at least 18%. The effect of raising the per signature cost by 18% will be to restrict participation in the initiative process for proponents with limited resources. See [Meyer, 486 U.S. at 423](#) (statute is a burden on speech as it limits proponents' "ability to make the matter the focus of statewide discussion"). Gratz testified that, after the Colorado Civil Rights Initiative failed in 2008, donors were deterred from pursuing a petition campaign in the 2010 general election because of the anticipated increase in costs

once the Colorado Assembly enacted H.B. 1326. Caldara said that, although some proponents could afford the high costs of a campaign, he would be unable to fund future signature-gathering campaigns because of the increases in costs. Tvert testified that, because of the large number of signatures required to qualify an issue for the ballot, even minor increases in the price of a single signature could significantly raise the **[**60]** costs of a signature-gathering campaign from \$200,000 to \$300,000. Finally, Kennedy testified that even a 25¢ increase in the per signature price could have the effect of pricing proponents out of running initiatives, especially in a tough economic climate. The Court finds that an 18% cost increase is significant. By raising the cost of signature-gathering activities, [§ 1-40-112\(4\)](#) will have the inevitable effect of reducing the total quantum of speech on a public issue. *Id.*⁵⁹

Accordingly, the Court finds that [§ 1-40-112\(4\)](#) imposes a severe burden on petition proponents and strict scrutiny applies. As the Tenth Circuit stated in *Chandler*, "petition circulation . . . is core political speech, because it involves interactive communication concerning political change," and consequently, *First Amendment* protection for this activity is "at its zenith." [292 F.3d at 1241](#) **[**61]** (quotations and alteration omitted). "[W]here the government restricts the overall quantum of speech available to the election or voting process . . . [such as] where the quantum of speech is limited due to restrictions on . . . the available pool of circulators or other supporters of a candidate or initiative," strict scrutiny applies. [Yes on Term Limits, 550 F.3d at 1028](#) (quotations and citations omitted).

B. Strict Scrutiny

To survive strict scrutiny, the Secretary has the burden of proving that the hybrid scheme is narrowly tailored to serve a compelling State interest. [Yes on Term Limits, 550 F.3d at 1028](#) (citation omitted). The Secretary argues that [§ 1-40-112\(4\)](#) furthers the State of Colorado's compelling interest in maintaining the integrity of the initiative process by reducing the incentive to commit fraud, increasing the validity of signatures, and maintaining public confidence in the

⁵⁹ Moreover, because [§ 1-40-112\(4\)](#) restricts the means of communication (i.e. payment to circulators), it affects the *communicative means* of persons advocating a position in a referendum and does not solely touch the process by which legislation is enacted. See [Initiative & Referendum Inst. v. Walker, 450 F.3d 1082, 1100 \(10th Cir. 2006\)](#).

initiative process.

The Court finds that the State of Colorado has a compelling interest in ensuring the reliability and honesty of the referendum and initiative process. See [Buckley, 525 U.S. at 187](#) (there must be substantial regulation of elections if they are to be fair and honest and if some **[**62]** sort of order, rather than chaos, is to accompany the democratic process); [Am. Constitutional Law \[*1278\] Found., Inc. v. Meyer, 120 F.3d 1092, 1098 \(10th Cir. 1997\)](#) (the State has interest in both candidate elections and ballot issues); [Campbell, 203 F.3d at 741](#) (the Colorado General Assembly has authority to adopt legislation designed to prevent fraud or mistake or other abuses in petition process). Nevertheless, the Court finds that [§ 1-40-112\(4\)](#) is not narrowly tailored to meet this compelling interest. See [Frisby v. Schultz, 487 U.S. 474, 485, 108 S. Ct. 2495, 101 L. Ed. 2d 420 \(1988\)](#) (noting that a "statute is narrowly tailored [for *First Amendment* purposes] if it targets and eliminates no more than the exact source of the 'evil' it seeks to remedy"). None of the evidence at trial established a connection between the type of compensation and the validity rates of petition sections. Instead, low validity rates were often the result of voter error or the use of inexperienced circulators. In addition, the trial evidence established that the incentive to commit fraud under a hybrid compensation system is likely greater than the incentive to commit fraud under a pay-per-signature system. Moreover, the frequency of fraud showed **[**63]** no measurable difference under any compensation model. Rather, the evidence established that, because most compensation models create financial incentives to motivate workers, certain individuals will commit fraud to earn more money regardless of the compensation scheme. Thus, the Secretary has provided no evidence that, as a class, pay-per-signature circulators are more likely to commit fraud when compared to circulators compensated under a different compensation scheme. See [Buckley, 525 U.S. at 204 n.23](#) ("While testimony in the record suggests that occasional fraud in Colorado's petitioning process involved paid circulators, it does not follow like the night the day that 'paid circulators are more likely to commit fraud and gather false signatures than other circulators'") (citations omitted); [Deters, 518 F.3d at 387](#) (whether "someone faced with the incentive to pad signatures will actually act upon it . . . is an empirical question, one for which there is little in the record to answer."); [Meyer, 486 U.S. at 426](#) ("we are not prepared to assume that a professional circulator — whose qualifications for similar future assignments may well depend on a reputation for competence and integrity

[64]** — is any more likely to accept false signatures than a volunteer who is motivated entirely by an interest in having the proposition placed on the ballot").

Additionally, the Court finds that the evidence relied upon by the Colorado General Assembly in enacting [§ 1-40-112\(4\)](#) does not entitle the statute to deference.⁶⁰ See [Landmark Commc'ns, Inc. v. Virginia, 435 U.S. 829, 843, 98 S. Ct. 1535, 56 L. Ed. 2d 1 \(1978\)](#) ("Deference to a legislative finding cannot limit judicial inquiry when *First Amendment* rights are at stake."); [Turner Broadcasting Sys., Inc. v. F.C.C., 512 U.S. 622, 666, 114 S. Ct. 2445, 129 L. Ed. 2d 497 \(1994\)](#) (noting that, although legislatures are far better equipped than the judiciary to "amass and evaluate the vast amounts of data," courts have an "obligation to exercise independent judgment **[*1279]** when *First Amendment* rights are implicated"); [Sable Commc'ns of Cal., Inc. v. F.C.C., 492 U.S. 115, 129, 109 S. Ct. 2829, 106 L. Ed. 2d 93 \(1989\)](#) (noting that deference to the legislature does not "foreclose [courts] independent judgment of the facts bearing on an issue of constitutional law"); [Sampson v. Buescher, 625 F.3d 1247, 1261 \(10th Cir. 2010\)](#) (finding that the State had not shown the disclosure regulation was sufficiently important to a governmental interest in light of **[**65]** the burden on plaintiffs' associational rights). Although a State need not present "elaborate, empirical verification" of the weight of its purported justification when the burden is moderate, see [Timmons, 520 U.S. at 364](#), it must come forward with compelling evidence when the burden is higher. See [Buckley, 525 U.S. at 203-04](#); [Meyer, 486 U.S. at 425](#); [Deters, 518 F.3d at 387](#).

Furthermore, there are less restrictive means to accomplish the State's goal of protecting the integrity of the initiative process. Rudy and Mikeworth testified that, **[**66]** because of a lack of resources, the Secretary is unable to detect a significant amount of circulator fraud. However, the Supreme Court has never held the lack of

⁶⁰Mark Grueskin, an attorney who specializes in election campaign finance and initiative petition litigation, testified that during the General Assembly debate on H.B. 1326 the legislators were shown a videotape of an underaged petition circulator, see Ex. D-49, and were presented with three photographs of allegedly false circulator addresses and a letter showing that five notaries who notarized circulator signatures were not licensed in Colorado. See, e.g., Ex. D-68 (Legislative History of H.B. 1326). Grueskin said that the General Assembly also heard testimony from various individuals about the benefits and potential problems raised by H.B. 1326.

public resources to be sufficient justification for a regulation to survive strict scrutiny. Cf. [Ohio Citizen Action v. City of Englewood](#), 671 F.3d 564, 575 (6th Cir. 2012) (noting that the "[Supreme] Court has never held the efficient allocation of public resources to be an interest sufficient to survive heightened scrutiny"). There are alternatives that would address the problems targeted by [§ 1-40-112\(4\)](#) without imposing a severe burden on plaintiffs' *First Amendment* rights. As the Supreme Court noted in [Buckley](#), Colorado retains several safeguards to protect the integrity of the initiative process and diminish corruption. See, e.g., [Colo. Rev. Stat. § 1-40-106](#) (making it a crime to forge signatures); [Colo. Rev. Stat. § 1-40-130](#) (making false witnessing, surrogate fraud, and false witnessing punishable by a fine of up to \$1500 or imprisonment for not more than a year). "These provisions seem adequate to the task of minimizing the risk of improper conduct in the circulation of a petition," especially since there has been **[**67]** little evidence that [§ 1-40-112\(4\)](#) will have any effect on the incidence of fraud. [Meyer](#), 486 U.S. at 427; see also [Riley v. Nat'l Fed'n of the Blind of N.C.](#), 487 U.S. 781, 800, 108 S. Ct. 2667, 101 L. Ed. 2d 669 (1988) (noting that "the State may vigorously enforce its antifraud laws to prohibit professional fundraisers from obtaining money on false pretenses or by making false statements"). Second, Colorado could publicly disclose petition sections, which would communicate information to the public without burdening plaintiffs' *First Amendment* rights. See [Doe v. Reed](#), U.S. , 130 S.Ct. 2811, 2820, 177 L. Ed. 2d 493 (2010) ("The signer [of the petition] is in the best position to detect these types of fraud, and public disclosure can bring the issue to the signer's attention"). These more narrowly tailored options are in keeping with the *First Amendment* directive that government not infringe on the freedom of speech absent compelling necessity, and then, only by means precisely tailored. [Burdick v. Takushi](#), 504 U.S. 428, 439, 112 S. Ct. 2059, 119 L. Ed. 2d 245 (1992).

Given the availability of other effective and less burdensome statutory tools to safeguard the State's interest, the Court concludes that [§ 1-40-112\(4\)](#) poses an undue restriction on plaintiffs' *First Amendment* **[**68]** rights. While the Secretary has provided evidence that fraud has occurred when the pay-per-signature method is used, he has not isolated the cause of circulator fraud as being the pay-per-signature method. Consequently, the State has failed to provide evidence that its regulation is narrowly (or even reasonably) **[**1280]** tailored to further its important interests. Accordingly, the Court finds that [Colo. Rev. Stat. § 1-40-](#)

[112\(4\)](#) is unconstitutional because it "unjustifiably inhibit[s] the circulation of ballot-initiative petitions." See [Buckley](#), 525 U.S. at 205.

C. Balancing Test

Given the Secretary's failure to show that pay-per-signature compensation incentivizes fraud to a greater extent than pay-per-hour compensation, the statute also fails the balancing test that courts have applied. See, e.g., [Burdick](#), 504 U.S. at 434 (noting that courts should balance "the character and magnitude of the asserted injury" to the rights protected by the *First Amendment* against "the precise interests put forward by the State as justifications for the burden imposed" by the regulation); [Tashjian v. Republican Party of Conn.](#), 479 U.S. 208, 213, 107 S. Ct. 544, 93 L. Ed. 2d 514 (1986) (same). As noted above, the State has a legitimate interest **[**69]** in ensuring the reliability and honesty of the referendum and initiative process. See [Buckley](#), 525 U.S. at 187. Colorado's law does not survive a balancing test, however, because the hybrid scheme does not sufficiently relate to the State's legitimate interest in reducing fraud or corruption. See [Deters](#), 518 F.3d at 387. Although the State is permitted "considerable leeway" in regulating the electoral process, this latitude is premised on the requirement that legislative choices not produce "undue hindrances to political conversations and the exchange of ideas." [Buckley](#), 525 U.S. at 191-92. This leeway does not apply here because the precise interest that the State identifies — fraud reduction — is not furthered by the statute. Moreover, the burden imposed by the statute, as discussed above, will likely reduce the number of qualifying initiatives and make it more difficult for proponents to attract financial support. The net effect will be to encumber the petition process unjustifiably and thereby reduce the "unfettered interchange of ideas for the bringing about of political and social changes." [Meyer](#), 486 U.S. at 421 (citation omitted). Thus, on balance, the State's legitimate interest **[**70]** in reducing fraud is outweighed by the burden imposed on plaintiffs' *First Amendment* rights. See [Anderson v. Celebrezze](#), 460 U.S. 780, 789, 103 S. Ct. 1564, 75 L. Ed. 2d 547 (1983) ("In passing judgment, the Court must not only determine the legitimacy and strength of each of those interests; it also must consider the extent to which those interests make it necessary to burden the plaintiff's rights").

D. Permanent Injunction

Having found that [Colo. Rev. Stat. § 1-40-112\(4\)](#) is an

unconstitutional infringement of plaintiffs' *First Amendment* rights, the Court next addresses plaintiffs' request for a permanent injunction and declaratory judgment that the statute is unconstitutional.

To obtain permanent injunctive relief, a party must satisfy the following four factors: (1) that it has suffered an irreparable injury; (2) that remedies available at law, such as monetary damages, are inadequate to compensate for that injury; (3) that, considering the balance of hardships between the plaintiff and defendant, a remedy in equity is warranted; and (4) that the public interest would not be disserved by a permanent injunction. *Monsanto Co. v. Geerston Seed Farms*, U.S. , 130 S.Ct. 2743, 2756, 177 L. Ed. 2d 461 (2010) (citation omitted).

Addressing **[**71]** the first factor, plaintiffs have shown that, unless the statute is enjoined, they will likely face irreparable injury. *Elrod v. Burns*, 427 U.S. 347, 373-74, 96 S. Ct. 2673, 49 L. Ed. 2d 547 (1976); see also *Dombrowski v. Pfister*, 380 U.S. 479, 485-86, **[*1281]** 85 S. Ct. 1116, 14 L. Ed. 2d 22 (1965) (holding that an allegation of impairment of freedom of expression demonstrated an irreparable injury).

With respect to the second factor, plaintiffs have no adequate remedies at law because damages cannot replace the loss of protected *First Amendment* rights. See *Nat'l People's Action v. Vill. of Wilmette*, 914 F.2d 1008, 1013 (7th Cir. 1990) ("[I]njunctive relief is especially appropriate in the context of *first amendment* violations because of the inadequacy of money damages"); see also *Legend Night Club v. Miller*, 637 F.3d 291, 297 (4th Cir. 2011).

With regard to the balance of the equities, "[s]peech is an essential mechanism of democracy, for it is the means to hold officials accountable to the people." *Citizens United v. Federal Election Comm'n*, 558 U.S. 310, 130 S.Ct. 876, 898, 175 L. Ed. 2d 753 (2010). Plaintiffs have a fundamental interest in being able to express their desire for political change and actively work toward achieving that goal through the ballot initiative process **[**72]** that the Colorado Constitution has provided. The State is unlikely to be harmed because, as discussed above, there is no evidence that there would be any less fraud under *§ 1-40-112(4)*'s hybrid compensation scheme than under a pay-per-signature scheme. Therefore, the equities also tilt in plaintiffs' favor.

Based on the foregoing, the Court finds that plaintiffs

have met their burden of showing that they are entitled to a permanent injunction of the enforcement of *Colorado Revised Statutes § 1-40-112(4)*. Plaintiffs are also entitled to a permanent injunction of any ancillary statute which enforces *§ 1-40-112(4)*, namely, *Colorado Revised Statutes §§ 1-40-135* and *1-40-121* to the extent that those sections apply to the restriction on per-signature compensation found in *§ 1-40-112(4)*.

III. CONCLUSION

Therefore, it is

ORDERED that, pursuant to the parties' Consent to Entry of Final Judgment on Plaintiffs' First Claim [Docket No. 339], judgment shall enter in favor of plaintiff and against defendant Scott Gessler, in his official capacity as Colorado Secretary of State, on plaintiffs' first claim for relief. It is further

ORDERED that judgment shall enter in favor of plaintiffs and against defendant **[**73]** Scott Gessler, in his official capacity as Colorado Secretary of State, on plaintiffs' fifth claim for relief. It is further

ORDERED that defendant Scott Gessler, in his official capacity as Colorado Secretary of State, is PERMANENTLY ENJOINED AND RESTRAINED from enforcing *Colo. Rev. Stat. § 1-40-112(4)*, any ancillary provision which enforces *Colo. Rev. Stat. § 1-40-112(4)*, and *Colo. Rev. Stat. § 1-40-112(1)*.

DATED March 29, 2013.

BY THE COURT:

/s/ Philip A. Brimmer

PHILIP A. BRIMMER

United States District Judge

Addendum B

1-40-112. Circulators - requirements - training. (1) No person shall circulate a petition for an initiative or referendum measure unless the person is a **resident of the state**, a citizen of the United States, and at least eighteen years of age at the time the petition is circulated.

(2) (a) A circulator who is not to be paid for circulating a petition concerning a ballot issue shall display an identification badge that includes the words "VOLUNTEER CIRCULATOR" in bold-faced type that is clearly legible.

(b) A circulator who is to be paid for circulating a petition concerning a ballot issue shall display an identification badge that includes the words "PAID CIRCULATOR" in bold-faced type that is clearly legible and the name and telephone number of the individual employing the circulator.

(3) The secretary of state shall develop circulator training programs for paid and volunteer circulators. Such programs shall be conducted in the broadest, most cost-effective manner available to the secretary of state, including but not limited to training sessions for persons associated with the proponents or a petition entity, as defined in section 1-40-135 (1), and by electronic and remote access. The proponents of an initiative petition or the representatives of a petition entity shall inform paid and volunteer circulators of the availability of these training programs as one manner of complying with the requirement set forth in the circulator's affidavit that a circulator read and understand the laws pertaining to petition circulation.

(4) It shall be unlawful for any person to pay a circulator more than twenty percent of his or her compensation for circulating petitions on a per signature or petition section basis. (Emphasis added)

Addendum C

1-40-135. Petition entities - requirements - definition. (1) As used in this section, "petition entity" means any person or issue committee that provides compensation to a circulator to circulate a ballot petition.

(2) (a) It is unlawful for any petition entity to provide compensation to a circulator to circulate a petition without first obtaining a license therefor from the secretary of state. The secretary of state may deny a license if he or she finds that the petition entity or any of its principals have been found, in a judicial or administrative proceeding, to have violated the petition laws of Colorado or any other state and such violation involves authorizing or knowingly permitting any of the acts set forth in paragraph (c) of this subsection (2), excluding subparagraph (V) of said paragraph (c). The secretary of state shall deny a license:

(I) Unless the petition entity agrees that it shall not pay a circulator more than twenty percent of his or her compensation on a per signature or per petition basis; or

(II) If no current representative of the petition entity has completed the training related to potential fraudulent activities in petition circulation, as established by the secretary of state, pursuant to section 1-40-112 (3).

(b) The secretary of state may at any time request the petition entity to provide documentation that demonstrates compliance with section 1-40-112 (4).

(c) The secretary of state shall revoke the petition entity license if, at any time after receiving a license, a petition entity is determined to no longer be in compliance with the requirements set forth in paragraph (a) of this subsection (2) or if the petition entity authorized or knowingly permitted:

(I) Forgery of a registered elector's signature;

(II) Circulation of a petition section, in whole or part, by anyone other than the circulator who signs the affidavit attached to the petition section;

(III) Use of a false circulator name or address in the affidavit;

(IV) Payment of money or other things of value to any person for the purpose of inducing the person to sign or withdraw his or her name from the petition;

(V) Payment to a circulator of more than twenty percent of his or her compensation on a per signature or per petition section basis; or

(VI) A notary public's notarization of a petition section outside of the presence of the circulator or without the production of the required identification for notarization of a petition section.

(3) (a) Any procedures by which alleged violations involving petition entities are heard and adjudicated shall be governed by the "State Administrative Procedure Act", article 4 of title 24, C.R.S. If a complaint is filed with the secretary of state pursuant to section 1-40-132 (1) alleging that a petition entity was not licensed when it compensated any circulator, the secretary may use information that the entity is required to produce pursuant to section 1-40-121 and any other information to which the secretary may reasonably gain access, including documentation produced pursuant to paragraph (b) of subsection (2) of this section, at a hearing. After a hearing is held, if a violation is determined to have occurred, such petition entity shall be fined by the secretary in an amount not to exceed one hundred dollars per circulator for each day that the named individual or individuals circulated petition sections on behalf of the unlicensed petition entity. If the secretary finds that a petition entity violated a provision of paragraph (c) of subsection (2) of this section, the secretary shall revoke the entity's license for not less than ninety days or more than one hundred eighty days. Upon finding any subsequent violation of a provision of paragraph (c) of subsection (2) of this section, the secretary shall revoke the petition entity's license for not less than one hundred eighty days or more than one year. The secretary shall consider all circumstances surrounding the violations in fixing the length of the revocations.

(b) A petition entity whose license has been revoked may apply for reinstatement to be effective upon expiration of the term of revocation.

(c) In determining whether to reinstate a license, the secretary may consider:

(I) The entity's ownership by, employment of, or contract with any person who served as a director, officer, owner, or principal of a petition entity whose license was revoked, the role of such individual in the facts underlying the prior license revocation, and the role of such individual in a petition entity's post-revocation activities; and

(II) Any other facts the entity chooses to present to the secretary, including but not limited to remedial steps, if any, that have been implemented to avoid future acts that would violate this article.

(4) The secretary of state shall issue a decision on any application for a new or reinstated license within ten business days after a petition entity files an application, which application shall be on a form prescribed by the secretary. No license shall be issued without payment of a nonrefundable license fee to the secretary of state, which license fee shall be determined and collected pursuant to section 24-21-104 (3), C.R.S., to cover the cost of administering this section.

(5) (a) A licensed petition entity shall register with the secretary of state by providing to the secretary of state:

(I) The ballot title of any proposed measure for which a petition will be circulated by circulators coordinated or paid by the petition entity;

(II) The current name, address, telephone number, and electronic mail address of the petition entity; and

(III) The name and signature of the designated agent of the petition entity for the proposed measure.

(b) A petition entity shall notify the secretary of state within twenty days of any change in the information submitted pursuant to paragraph (a) of this subsection (5). (**Emphases added**)
