+ 30 days old 18

Blockers 527

Medium 255

Low 872

Bug Status

Unfixed 55

Blockers 527

Over 30 days old 18

Blocker bugs are the worst kind - accessibility issues that don't have work arounds, and render the asset unusable.

Medium 255

Medium bugs are accessibility issues that may have work arounds, but are not ideal. They affect the usability of the asset.

Low 872

Low bugs are accessibility issues are pesky issues that have work arounds, but should be addressed.

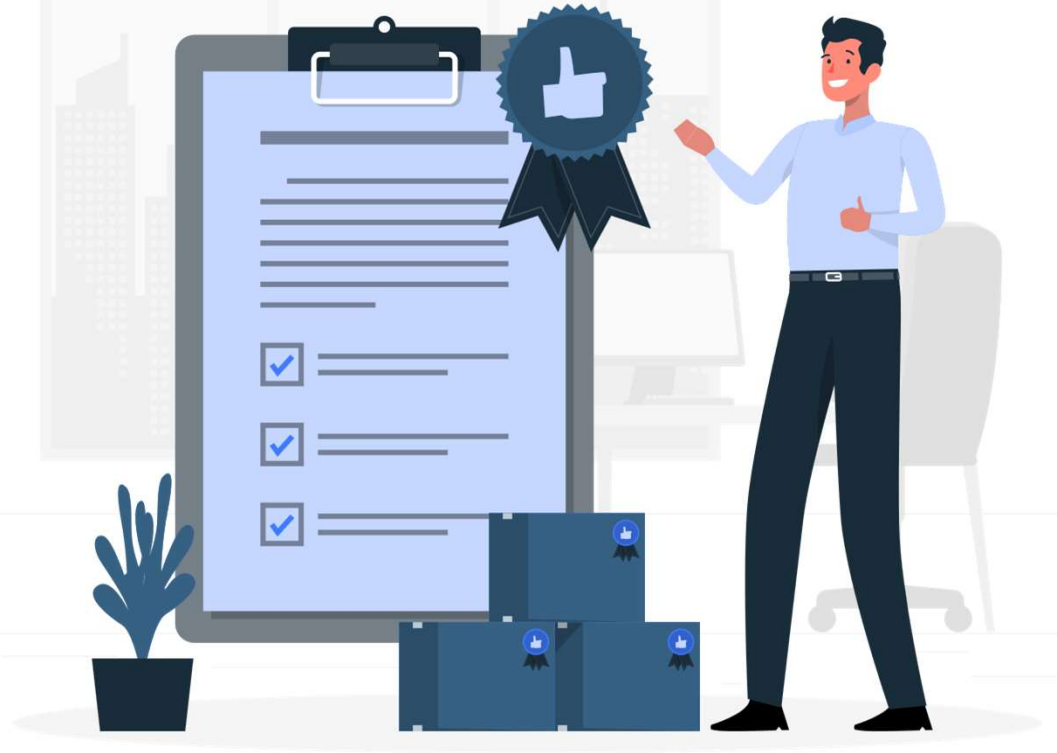
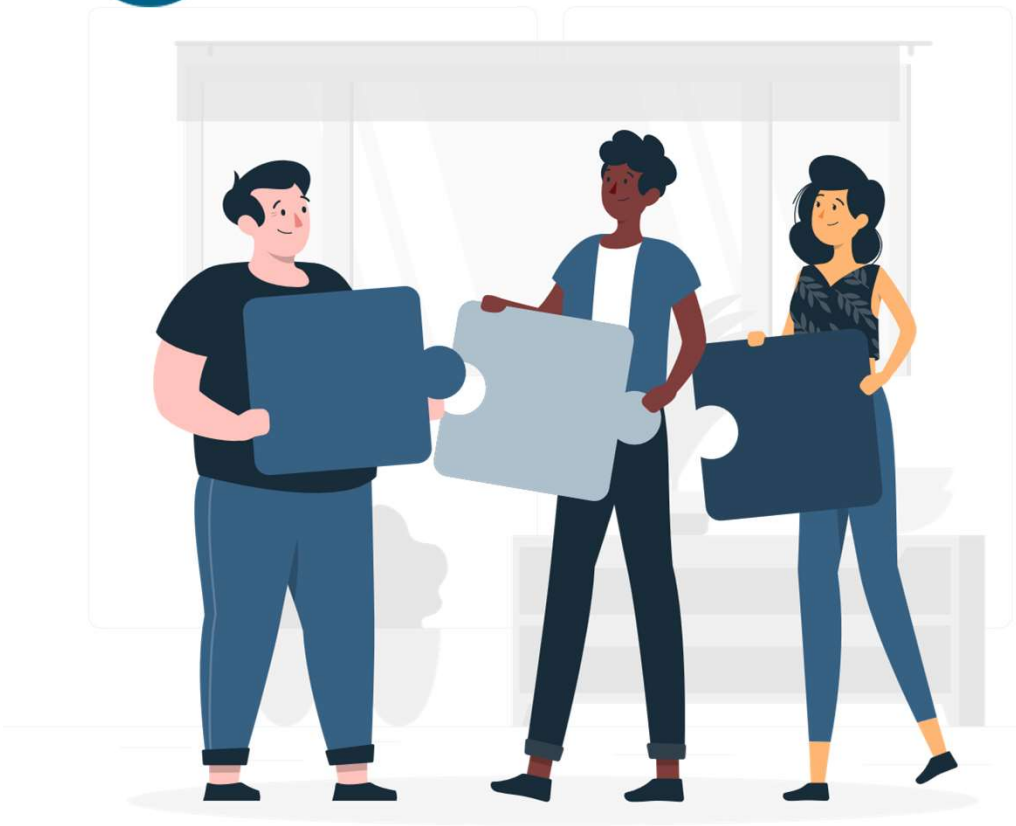
PERSPECTIVE TESTER

perspectivetester.com

How is Compliance Determined?

Accessibility is determined by testing against the Web Content Accessibility Guidelines (WCAG). These standards are published by the World Wide Web Consortium (W3C). Sir Tim Berners-Lee, the inventor of the Web, directs this effort.





Which Conformance Level Do I Need?

We test against the latest standard available: WCAG 2.2 AA. We do this because testing against this standard assures our clients are compliant with all current legislation and regulation regarding online accessibility.

PERSPECTIVE TESTER

How We Test

We manually test with screen readers, both mobile and desktop. We use multiple device combinations, ensuring all the major browsers, operating systems and devices can access the software being tested. We explain what was tested and why, what the outcome was for the disabled user and what the law requires the outcome to be. We include detailed solutions in our reports so your dev team understands at the code level what has been discovered and how it should be fixed.
