

**Initiative #97**  
**Increased Setback Requirement for Oil and Natural Gas Development**

1 **Proposition ? proposes amending the Colorado statutes to:**

- 2     ◆ require that new oil and natural gas development be located at least 2,500 feet  
3     from occupied structures, water sources, and other vulnerable areas.

4 **Summary and Analysis**

5     Proposition ? requires that any new oil and natural gas development be located at  
6     least 2,500 feet from occupied structures and vulnerable areas. This type of  
7     requirement is commonly known as a setback. Entering a previously plugged or  
8     abandoned oil or natural gas well is held to this same setback requirement. The  
9     measure also allows local governments to require a setback distance greater than  
10    2,500 feet. If two or more local governments with overlapping boundaries establish  
11    different setback requirements, Proposition ? requires that the greater distance be used.

12     The measure does not apply to existing development or on federal land. Federal  
13    land in Colorado includes national forests, national parks, and other land owned by the  
14    federal government. About 36 percent of the land in Colorado is federal land.

15     **Definitions.** Proposition ? defines oil and natural gas development to include the  
16    exploration for, and the drilling, production, and processing of oil or natural gas. Oil and  
17    natural gas development also includes hydraulic fracturing, flowlines between oil and  
18    natural gas facilities, and the treatment of associated waste. Occupied structures  
19    include most buildings where people live or work. Vulnerable areas include  
20    playgrounds, permanent sports fields, amphitheaters, public parks, public open space,  
21    public and community drinking water sources, irrigation canals, reservoirs, lakes, rivers,  
22    perennial or intermittent streams, creeks, and any other vulnerable area designated by  
23    the state or a local government.

24     **State regulation of oil and natural gas.** The Colorado Oil and Gas Conservation  
25    Commission (COGCC) in the Colorado Department of Natural Resources establishes  
26    and enforces regulations on oil and natural gas operations in the state. The COGCC is  
27    charged with fostering the responsible development, production, and use of oil and  
28    natural gas resources in a manner that protects public health, safety, welfare, and the  
29    environment. The COGCC consults with the Colorado Department of Public Health and  
30    Environment (CDPHE) to consider the health and safety of the public when regulating oil  
31    and natural gas operations. The CDPHE regulates air pollution, the discharge of water  
32    to surface water bodies, and the disposal of hazardous waste related to industrial  
33    activities, including oil and natural gas operations.

1       **Existing setback requirements.** Current COGCC regulations, approved in 2013,  
2 prohibit oil and natural gas wells and production facilities from being located closer than:

- 3       • 500 feet from a home or other occupied building; and
- 4       • 1,000 feet from high-occupancy buildings such as schools, health care  
5       institutions, correctional facilities, and child care centers, as well as  
6       neighborhoods with at least 22 buildings.

7  
8       The surrounding area encompassed by the current 500-foot setback includes about  
9       18 acres, and the 1,000-foot setback area includes about 72 acres. Proposition ?  
10       increases the setback to a minimum of 2,500 feet, or about 450 surrounding acres.

11       The current COGCC setback requirement may be waived in certain instances by the  
12       land or building owner. Proposition ? does not include a waiver provision.

13       **Oil and natural gas resources in Colorado.** Geologic formations containing oil  
14       and natural gas are found in many areas of Colorado, with some formations underlying  
15       multiple local communities. Recent development of these resources has been  
16       concentrated in Weld, Garfield, La Plata, Rio Blanco, and Las Animas Counties, as well  
17       as portions of surrounding counties. Most of the state's oil production occurs in  
18       Weld County. Oil and natural gas resources are owned or leased by many different  
19       private companies, governments, financial institutions, nonprofits, and private  
20       individuals. Oil production in Colorado doubled between 2013 and 2017. Natural gas  
21       production in Colorado has been stable over the past ten years. In 2016, Colorado  
22       ranked seventh among the states in domestic oil production and fifth in natural gas  
23       production. In 2017, there were about 54,000 producing wells in Colorado, a 48 percent  
24       increase since 2007.

25       **Oil and natural gas extraction technologies.** Technological developments, such  
26       as horizontal drilling and hydraulic fracturing, or "fracking," have led to substantial oil and  
27       natural gas production increases in Colorado and nationally, as well as an increase in  
28       the number of wells and related facilities. Hydraulic fracturing is used for most new wells  
29       and involves pumping a mixture of mostly water and sand, and small amounts of  
30       chemicals, into underground rock layers where oil or natural gas is located. The  
31       pressure of the water creates small fractures in the rock. The sand keeps the fractures  
32       open, allowing the oil or natural gas to escape and flow up the well. Hydraulic fracturing  
33       enables access to oil and natural gas formations that were previously inaccessible.  
34       Horizontal drilling enables oil and natural gas operators to drill multiple wells from a  
35       single location to improve their efficiency and minimize surface disturbances. With  
36       current extraction technologies, oil and natural gas wells have the greatest volume of  
37       production in their first year of operation and decrease in production each successive  
38       year.

39       **State and local revenue from oil and natural gas.** Companies that extract mineral  
40       resources, including oil and natural gas, coal, and metallic minerals, pay severance  
41       taxes to the state. Oil and natural gas tax collections fluctuate annually. From budget  
42       years 2012-13 to 2016-17, severance tax collections ranged from \$4.0 million to  
43       \$264.7 million per year. Under current law, Colorado severance tax revenue is split  
44       between state programs and local governments. The state also collects some revenue  
45       from royalty and lease payments. Oil and natural gas producers also pay income taxes,  
46       sales taxes, and local property taxes.

For information on those issue committees that support or oppose the measures on the ballot at the **November 6, 2018**, election, go to the Colorado Secretary of State's elections center web site hyperlink for ballot and initiative information:

<http://www.sos.state.co.us/pubs/elections/Initiatives/InitiativesHome.html>

1     **Arguments For**

- 2           1) Oil and natural gas operations may adversely impact public health, safety, and  
3           the environment. Some people living near these operations have reported  
4           negative health effects to the CDPHE, including irritation of the eyes, nose,  
5           throat, lungs or skin, or other symptoms such as headaches, dizziness, nausea,  
6           and vomiting. Such development may also negatively impact nearby residents,  
7           businesses, and other properties through increased noise, traffic, dust, light, and  
8           odors. Proposition ? requires that new oil and natural gas development be  
9           located farther away from homes, schools, businesses, and other buildings,  
10          thereby reducing nuisance impacts and potential exposure to air pollutants.  
11          Proposition ? also expands protections for environmental and recreation areas.
- 12          2) Proposition ? provides property owners with greater certainty about the location  
13          of new oil and natural gas development in their communities. Keeping oil and  
14          natural gas development farther away from occupied structures reduces resident  
15          exposure to industrial activity and the potential hazards related to such activity. It  
16          may also improve the quality of life for nearby residents. Some people are  
17          reluctant to purchase or rent a home or visit a business or recreation area  
18          located near oil or natural gas development.

19     **Arguments Against**

- 20          1) Proposition ? prohibits any new oil and natural gas activity in most areas of the  
21          state that are not owned by the federal government. About XX percent of  
22          Colorado's non-federal land would be excluded from development with the  
23          required 2,500-foot setback. The oil and natural gas extraction industry is an  
24          important part of Colorado's economy. In 2016, the industry accounted for  
25          \$7.4 billion of the state's gross domestic product. Proposition ? will reduce the  
26          economic benefits the oil and natural gas industry provides for the state,  
27          including jobs, payments to mineral owners, and lower energy prices, and will  
28          also reduce tax revenue that is used for local projects and services.
- 29          2) Proposition ? is unnecessary because the existing COGCC setback  
30          requirements help protect public health, safety, and the environment. The state's  
31          existing setback requirements were developed through a collaborative  
32          rule-making process and guided by technical expertise. When adopting its  
33          setback rules, the COGCC considered the concerns of mineral owners,  
34          residents, schools, businesses, and others. Under current law, the COGCC has  
35          the authority to modify setback requirements in the future, if necessary.

36     **Estimate of Fiscal Impact**

37  
38     *(Please note: A summary of the fiscal impact will be included in this space in the second*  
39     *draft of the analysis. A final fiscal impact statement will be prepared and placed on the*  
40     *General Assembly's website when the final blue book is sent to voters.)*
