

My name is Steve Szabo and I'm a Colorado Renewable Energy Society Policy Committee member, and a member of the Colorado Coalition for a Livable Climate.

The Colorado Renewable Energy Society and the Colorado Coalition for a Livable Climate supports the Community Choice study bill. But we will need to look at any future amendments before making a final statement of support.

I remember back when I worked for AT&T Long Lines which was part of the Bell Operating Companies, that was founded in 1885. The Bell Operating Companies had a monopoly in the telecommunications arena until 1982, when divestiture occurred. For those of us that worked for AT&T, we thought this was "The end of the world as we know it", and we didn't feel fine. Later this became the title of a REM song.

As it turns out the breakup of the Bell System was a benefit for consumers by lowering rates, giving consumers more options and advancing telecommunication technology.

So please vote yes on this study bill, after all it's only a study.
