Mother:

Baby Girl

Admit Intensive Care Nursery on August 29, 1977.

U-001

Date of Birth: 8/29/77.

This baby was born prematurely to a 19-year-old unmarried mother. According to the mother's hospital record, her last menstrual period was 5/08/77. However, she reportedly stated she had had no period in March or April. She was estimated to be about 13 weeks pregnant. On August 24th, Saline infusion for an abortion was done but was unsuccessful. On August 27th, Pitocin drip was started. It was also repeated on August 28th. Her bag of water broke about 6:30 PM. Pitocin drip was continued on the 29th. The baby was delivered spontaneously in bed by a nurse. Apgar at one minute was reported to be 6 and at 5 minutes 2. The baby is reported to have had a spontaneous weak cry. It was a vertex BSA presentation. The mother is reported to be a Group A, Rh positive. The baby was brought to the Intensive Care Nursery and was put in about 35 percent O₂, was logged some and respirations were established but the cry remained rather weak. Capillary blood gases were ordered. pH was 7.07, pCO₂ 62, G02 20, pO₂ was 51. Exam revealed a premature infant. In 35 percent O₂. She has some grunting and retracting. Respirations are approximately 42 per minute. The pulse was 140. The color was relatively pink. Birth weight was approximately 1,300 grams. Skull symmetrical. There is some bruising. Fontanelle is soft. Eyes, ears, nose and throat, pupils reactive to light. Lungs, nose and throat were negative.

ECG: Respirations around 60 per minute. It is only fair air entry. There is some grunting and retracting.

HEART: Not enlarged. No murmurs.

Rate 140 per minute.

ABDOMEN: Soft. No masses.

Liver, kidneys and spleen not enlarged. No hernia.

GENITALIA: Negative.

EXTREMITIES: Negative.

IMPRESSION:

Prematurity, probably in developing a respiratory distress syndrome.

Secondary - Disorb, Physiological condition arising from the situation and the mother.
