## Strain Highlights

Aurora indica, bred by Nirvana Seeds, is a 90% indica cross between Afghan and Northern Lights. Fulfilling our expectations of an indica, this strain induces heavy full-body effects and a sedating cerebral calm. Aurora Indica is a potent strain for evening treatment of insomnia, pain, and other conditions requiring a restful night's sleep. The short plants produce dense, bulky buds dusted in a thick layer of crystal resin. Different phenotypes emerge under different growing conditions, giving way to variable bud structures and aromas ranging from fruity to floral. Nirvana Seeds recommends a 9 to 11-week flowering time for indoor gardens, or a mid-September harvest for outdoor growers.

"My Aurora Indica was grown from seed in 80/20 Perlite/Vermiculite with an 8 week veg cycle. Each plant was topped once at 4 weeks. 3 plants produced nearly 450g total. Good leaf to bud ratio. Dense bud structure even under a T5. Strong branching required no support. Harvested with cloudy and amber trichomes. Sticky even after months of curing. Gums up a grinder quickly. With such a generous yield I was able to try c..."

## Strain Highlights

Bubblicious (not to be confused with Wonka's Bubblicious) is Nirvana Seeds' rendition of the classic Indiana Bubble Gum. Refined in the Netherlands since the 1990s, Bubblicious captures the signature bubble gum flavor that first lent this hybrid widespread notoriety. Sometimes, Bubblicious will even take on a pink hue that further justifies the naming of this sweet-smelling hybrid. Potent and relaxing, Bubblicious offers full-body effects that soothe tension and stress even in seasoned THC veterans.

## Strain Highlights

A true A-List cannabis strain. Blueberry's legendary status soared to new heights after claiming the *High Times*' Cannabis Cup 2000 for Best Indica. The long history of the strain is traced back to the late 1970s when American breeder DJ Short was working with a variety of exotic landrace strains. However, throughout the decades of Blueberry's cultivation the genetics have been passed around, due in large part to DJ Short working with multiple seed banks and breeders. The sweet flavors of fresh blueberries combine with relaxing effects to produce a long-lasting sense of euphoria. Many medical patients appreciate Blueberry for its ability to suppress pain and relieve stress, while connoisseurs and growers admire the strain for its colorful hues and high THC content.

"Good strain, felt like more of an uplifting indica which wasn't what I was expecting. Would be great for daytime sedation without being too couch locked. Wouldn't recommend for evening use as I didn't feel very drowsy. The smell definitely reminded me of blueberries while the taste was earthy and smooth. Definitely give this a try if you have a chance!"

## Strain Highlights

Pineapple Skunk by Humboldt Seeds is a hybrid cross between Pineapple, Skunk #1, and Cheese. This fragrant plant offers a sweet, pineapple aroma with strong, physical effects. Known for its couch lock potential, Pineapple Skunk is optimal for relieving stress, insomnia, and pain and is best experienced during inactive hours. Indoor or outdoor grows are viable options for beginning and veteran growers alike, with higher yields indoors flowering around 8 weeks.

"This hit me hard within the first 15 minutes, I only needed a little. Which was surprising compared to most of the other strains I do. I usually take about 30-40 hits in order to become fully medicated. I tend to have the opposite effects, where a Sativa would give you Energy, it would put me to sleep. Indica's give me energy and I am able to function better than normal like a well oiled machine. It's great for pain..."

## About Resin Seeds

[View all Resin Seeds products](#)

After releasing their Cannatonic strain in 2008, **Resin Seeds** are considered the founders of the CBD movement within the industry.

This strain set about a new quest for the newly formed seedbank, which was to search the globe for ultimate medicinal strains. Today, Resin Seeds takes pride in knowing that thousands of people across the globe have benefited mightily from the unique healing abilities of their specially bred strains. However, no strain has made as much of an impact, than the aforementioned Cannatonic.

It was in 2008 that Cannatonic was unveiled to the public and accomplished a feat not easily imaginable at the time; the strain won a High Times Amsterdam Cannabis Cup in a Sativa category, despite the fact that Cannatonic is largely a non-psychoactive plant. The judges were so overwhelmingly impressed with the initial sensation of a balanced THC/CBD high that they had no choice but to include Cannatonic amongst the winners.

Since then, Resin Seeds have continued developing their CBD line to include Hammershark and Dieseltonic, the latter of which also won an award in Amsterdam's High Times Cannabis Cup, in 2013.

Resin Seeds also offer some fantastic high THC strains which are immensely popular all over the world; it was recently revealed that Resin's genetics are now being grown in places as varied as The Gambia, Slovenia, Cambodia, New Zealand and more.

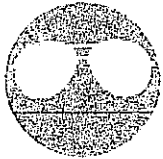

All of Resin Seeds strains are developed in Spain, where they base themselves year round. One of the defining aspects of this seedbanks is that they work exclusively with select cuttings given to them by the original breeder. They don't buy seed or go pheno hunting, they go straight to the source. This means that every parental plant in their stock has been selected and given to Resin by the original creator of the plant.

"Cannatonic is a very unique strain, from my experience. I usually smoke THC dominant bud, whether it be a heavy Indica or a daytime Sativa. This is true medicinal marijuana, though. Cannatonic has very little psychoactive effect. For some, that is a negative, but for some it is a major and strain defining positive. This certainly isn't recreational weed. It isn't going to get you stoned or high. This is just pure ..."

## Description

CBD God results from the identification of a special pink pistil pheno-type of God Bud. Together with one of the leading medical marijuana research organisations in Canada BC Bud Depot used pollen from a 7% CBD Harlequin BX4 male plant. The end product was spectacular.

CBD God is an indica-dominant hybrid cannabis strain of which every pheno-type delivers between 4% - 16% CBD! Some of these still produce very high THC but with a guaranteed minimum of 4% CBD. In contrast some plants will yield 16% CBD with just 4% THC, a mind-blowing ratio of 1:4 THC:CBD. Other plants have 1:1 ratios. These natural variations allow the medical grower to select phenos that suit their particular needs.

Capable of being grown indoors and outdoors these short plants are mature with 8 - 9 weeks flowering; in northern latitudes harvest is during October and wherever grown yields will be heavy. Medicinally CBD God is useful to combat insomnia, lack of appetite, pain relief, symptom's of Parkinson's disease as well as to counter seizures.

## Characteristics

BREEDER	BC Bud Depot
GENETICS	Isolated Pink Pistil High CBD God x Harlequin Bx4
PACK SIZE	12 Seeds

# HIGH CBD HEMP

## THE HEMP PLANT

The Cannabis sativa L plant is a sustainable resource that provides a variety of uses from food and nutrition, to body care, paper, textiles, fabric, fuel, plastic alternatives, building materials, and more. Currently twenty-three states in the U.S. can legally grow hemp for industrial or research purposes. An exceptionally hearty plant, and at a time when our current world is being impacted with high levels of CO<sup>2</sup> affecting our oceans and climate, disturbing its natural balance, the hemp plant may very well be a remedy to much of the challenges. For every ton of hemp grown, not only is 1.6 tons of carbon absorbed, but, its phytoremediation properties have shown to remove toxins and radiation from the soil.

## WHAT IS CBD?

Cannabidiol (CBD), is a cannabis compound that has been shown to hold significant medical benefits. With no more than .3% THC, CBD is non-psychoactive compound inherent to the Cannabis sativa L plant (hemp). The tide has turned as we are now seeing a vast increase in scientific and clinical research, much of it is being completed through and by the US government. These studies are highlighting CBD's potential as a treatment for a wide range of conditions, including arthritis, diabetes, alcoholism, MS, chronic pain, schizophrenia, PTSD, depression, antibiotic-resistant infections, epilepsy, and other neurological disorders. CBD has demonstrable neuroprotective and neurogenic effects, and its anti-cancer properties are currently being investigated at several academic research centers in the United States and elsewhere.

## HEMP CAN HEAL THE WORLD
